Department of Computer and Communication Engineering

International Islamic University Chittagong

Faculty of Science and Engineering

1. The Mission, Vision, Objectives and Motto of IIUC:

1.1 Introduction: International Islamic University Chittagong (IIUC) is one of the top graded government approved private universities in Bangladesh. Having fulfilled the requirements as laid down in the Private University Act of 1992, and after obtaining the necessary clearance from University Grants Commission (UGC), and the permission of Government of Bangladesh (GOB) through the Ministry of Education, **International Islamic University Chittagong (IIUC)** started functioning on **February 11, 1995**. The credit for the idea of establishing this University goes to International Islamic University Chittagong Trust (IIUCT). IIUC framed its own Statutes, Ordinances and Regulations governing the manifold activities of IIUC - academic, administrative, financial, student welfare, discipline etc. as per the **Private University Act, 1992, 1998 and revised Act, 2010**. Most statutory bodies formed under the provisions of the Act have since then been functioning.

1.2 The Mission of the University is to produce through the pursuit of education properly trained up manpower to contribute to socio-economic development and moral upliftment of the society and to cultivate in our student's expertise as well as ethical sensitivity, intelligence and an ability to think independently beyond their areas of study, so that they can sustain justice in all walks of life.

1.3 The Vision of the University is to offer nationally competitive and internationally recognized opportunities for learning to make this University as the Centre of Excellence in different areas of scholarship, like Shari'ah and Islamic Studies, Business Studies, Social Science, Science & Engineering, Arts & Humanities, Law, and such other faculties that will be introduced in future. Its door is open to the admission seekers from all over the world, regardless of race, region and religion. This university cherishes the dream of becoming one of the highest seats of learning and creator of knowledge in the South East Asia.

1.4 The Objective of the University:

- a. To create a new generation of competent youths, who will be equipped with academic excellence, professional expertise and adorned with moral height.
- b. To follow a policy of continued Modernization of Knowledge and academic curricula in different disciplines of education so that its students can imbibe the true spirit of religious value as an effective guiding principle in their profession and daily life.

1.5 The Motto of the University is to "**Combine Quality with Morality**".

2. Teaching Methods and Policy:

2.1 Methods: Outcome-based education (OBE) and Bi- Semester system of Continuous Quality Improvement (CQI) through self-examination and external review. In this process students are evaluated throughout a course of study rather than exclusively by examination at the end. It is multidimensional based on student's (a) attendance in the Classes; (b) performance in Assignments and Class Tests, (c) Scores in the Mid-Term and the Final Examination (d) Lab. Reports, (e) Thesis/ Project/ internship, (f) Presentations (g) Viva-voce, (f) Industry visits (g) Co-Curricular and Extra-curricular activities.

2.2 Policy: The University is committed to the life-long success of students in its undergraduate and master's programs through high-quality instruction and learning experiences. IIUC has **Integrated Education** Policy, where a student achieves holistic learning through awareness of his surroundings and other relevant knowledge bases. IIUC emphasizes the diffusion of scientific, technical and professional knowledge on the one hand, & building up of character in youth by making religion and ethics an integral part of education on the other. In this regard, there are some courses for the students of all Faculties at IIUC, which are not a part of the main curriculum of the Departments, but those are named as **University Requirement Courses (URC)**.

2.3 Morality Development Program: IIUC incorporates studies on the values of mutual respect & peaceful co-existence in the courses under the "**Morality Development Program (MDP)**" which includes all students of the university irrespective of caste, creed or religion.

2.4 Co-Curricular and Extra-curricular activities: IIUC supports student participation in a broad array of *Co-Curricular and Extra-curricular activities* as an integral component of its commitment to student life and success. These programs mainly include leadership training, cultural, environmental, recreational and social activities, debating & public speaking programs, intellectual discussions, games & sports, excursion and study tours home & abroad to complement academic pursuits. By these programs' students earn capacity to express out themselves properly, maintain personality and learn to respect people of other faiths through mutual understandings among various regions, religions, beliefs and cultures. All *Co and Extra-curricular* activities are run by the clubs named after the Departments such as Computer club, Business club etc. under the close supervision and monitoring of Students Affairs Division (STAD).

2.5 Student Advisor: IIUC provides academic counseling, career and student welfare counseling by the **Student Advisor** of the respective section of students of each **Semester**.

3. The Mission, Vision and Objectives of Faculty of Science and Engineering (FSE)

3.1 MISSION:

The mission of the Faculty of Science and Engineering is to foster excellence in teaching, research, and learning within a systems approach to science and engineering education. Our goal is to produce engineering graduates with both a strong base of technical knowledge and the complementary skills needed to be successful professional engineers in the modern world.

3.2 VISION:

The vision of the Faculty of Science and Engineering is to be a dynamic centre of innovation and creativity dedicated to teaching, learning, professionalism, research, entrepreneurship, and partnership with local and global communities. The aims of the Faculty are to provide international standard quality programs of undergraduate and graduate education; to be a research active unit advancing the knowledge of science and engineering; and to serve the community and industry as an agent of technological, and educational innovation and advancement.

3.3 OBJECTIVES:

The Faculty plans to achieve this vision and mission through the pursuit of the following specific objectives:

1. To provide high quality degree programs of international standards at undergraduate and graduate level.
2. To build programs to meet evolving student, industry, and community needs.
3. To advance research and scholarship by promotion of excellence in education and professionalism.
4. To build the physical infrastructure and human resource capacity to ensure our students are gaining the skills, experience and ethical values needed to work as professional engineers.
5. To foster collaboration with academic institutions and professional bodies in the region and beyond so as to extend our impact to the country, region and whole world.

4. The Mission, Vision and Objectives of Computer and Communication Engineering (CCE) Department:

4.1 MISSION:

The Mission of the department is to produce, through the pursuit of education, properly trained up and ethically sound manpower in the field of Computer and Communication Engineering to contribute to the socio-economic development and moral upliftment of the society and to cultivate in our student's an ability to think independently beyond their areas of study, so that they can sustain justice in all walks of life.

Mission Statements:

M1: Properly Trained up Manpower.

M2: Contribute to Socio-economic Development.

M3: Ethically Sound.

M4: Ability to Think Independently.

M5: Sustain Justice in all Walks of Life.

4.2 VISION:

To produce globally competitive and socially sensitized Engineering graduates and to establish the department as a center of excellence by bringing out the professional competence in the core areas of Computer and Communication Engineering also becoming one of the best departments in the South East Asia.

5. Program Educational Objectives (PEOs):

The Program Educational Objectives for Computer and Communication Engineering (CCE) are as follows:

PEO 1: Graduates will successfully engage in careers in Computer and Communication Engineering related fields appropriate to their background, interest, and skills.

PEO 2: Exploit the habit of teamwork using leadership qualities with clarity of communication to achieve social and economic objectives of related projects in the professional field.

PEO 3: Exhibit ethical attributes and proper responsibility to society and the environment in personal and professional conduct.

PEO 4: Involve in lifelong self-learning, career enhancement, and adapt to changing multidisciplinary professional and social needs.

5.1 Mapping Between PEOs and Departments Mission Statements:

Program Educational Objectives (PEOs) and their alignment with the departmental mission are presented in the following table:

Table 5.1: Mapping of PEO Statements with Mission Statements of the Institution

PEO No.	PEO statement	Institutional/departmental mission statements				
		Mission Statement - 1	Mission Statement - 2	Mission Statement - 3	Mission Statement - 4	Mission statement - 5
1.	Graduates will successfully engage in careers in Computer and Communication Engineering related fields appropriate to their background, interest, and skills.	Properly Trained up Manpower				
2.	Exploit the habit of teamwork using leadership qualities with clarity of communication to achieve social and economic objectives of related projects in the professional field.		Contribute to Socio-economic Development		Ability to Think Independently	
3.	Exhibit ethical attributes and proper responsibility to society and the environment in personal and professional conducts			Ethically Sound		Sustain Justice in all Walks of Life
4.	Involve in lifelong self-learning, career enhancement and adapt to changing multidisciplinary professional and social needs		Contribute to Socio-economic Development		Ability to Think Independently	

5.2 Relationship between the POs and PEOs

For the first round of PO establishment, The POs of B. Sc in the CCE program is adapted from the Program Outcomes defined in BAETE Accreditation Manual for Undergraduate Engineering program published in April-2017 as they are in complete harmony with PEOs of the program of B.Sc. in CCE. Graduates of the B.Sc. in Computer and Communication Engineering (CCE) program are expected to achieve the following Program Outcomes (POs) by the time of graduation, as shown in Table 5.2.

Table 5.2: List of Program Outcomes (POs) that will be attained by the CCE graduates

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, research the literature and analyze complex engineering problems and reach substantiated conclusions using first principles of mathematics, the natural sciences, and the engineering sciences (Fundamentals and Specialization).
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety as well as cultural, societal, and environmental concerns.
PO4	Investigation: Conduct investigations of complex problems, considering the design of experiments, analysis, and interpretation of data and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and advanced engineering and IT tools, including prediction and modeling to complex engineering problems with an understanding of the limitations.
PO6	The Engineer and Society: Apply to reason informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate the knowledge of and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics, responsibilities, and the norms of the engineering practice.
PO9	Individual Work and Teamwork: Function effectively as an individual and as a member or leader of diverse teams as well as in multidisciplinary settings.
PO10	Communication: Communicate effectively about complex engineering activities with the engineering community and with society at large. Be able to comprehend and write effective reports, design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's work as a member or a leader of a team to manage projects in multidisciplinary environments.
PO12	Life-Long Learning: Recognize the need for and have the preparation and ability to engage in independent, life-long learning in the broadest context of technological change.

5.3 Mapping Between POs and PEOs:

Table 5.3: Mapping Between POs and PEOs

No.	PO Statements	PEO 1	PEO 2	PEO 3	PEO 4

7. Attendance

(Ref. Faculty of Science and Engineering Ordinance (FSEO) article no-11):

Table-7.1: Awarding marks for Attendance

Attendance	Awarding marks
90% and above	10
85% to less than 90%	9
80% to less than 85%	8
75% to less than 80%	7
70% to less than 75%	6
65% to less than 70%	5
60% to less than 65%	4
less than 60%	0

In order to be eligible to appear, as a regular candidate, at the semester final examinations, a student shall be required to have attended at least 70% of the total number of periods of lectures/tutorials/laboratory classes offered during the semester in every **course**. A student whose attendance falls short of 70% but not below 60% in any **course** may be allowed to appear at the final examinations **as non-collegiate student**. A student, appearing the examination under the benefit of this provision shall have to pay in addition to the fees, the requisite fee prescribed by the authority for the purpose. Students having **less than 60% attendance** in lecture/tutorial/ laboratory of **any course will be declared dis-collegiate. They will not allow appearing in that course** at the final examinations of the semester. They will get 'F' grade in the semester result.

8. The Grading System:

(Ref. FSEO article 3.1) The Grading System for assessing the performance of the students shall be as follows:

Table-8.2: Grading System

Numerical grade Marks%	Letter Grade (LG)		Grade Point (GP/unit)	Remarks/Status
80-100	A+	A plus	4.00	Excellent
75 to less than 80	A	A regular	3.75	Very good
70 to less than 75	A-	A minus	3.50	
65 to less than 70	B+	B plus	3.25	Good
60 to less than 65	B	B regular	3.00	
55 to less than 60	B-	B minus	2.75	Satisfactory
50 to less than 55	C+	C plus	2.50	Pass
less than 50	F	F	0.00	Fail

The performance of a student will be evaluated in terms of semester **grade point average (GPA)** and **cumulative grade point average (CGPA)** which is the grade average for all semesters.

To have graduation degree a student **must obtain CGPA at least 2.5**. This policy will be effective from Autumn-2017 semester for newly admitted students and onwards. (Ref: 204th Syndicate Meeting held on 23rd September 2017).

9. Earned Credit

(Ref. FSEO article 3.6): The courses in which a student has obtained minimum '**C+**' in 'Theoretical courses' 'Laboratory courses & General Viva-voce' or higher grade will be counted as credits earned by the student. Any course in which a student has obtained 'F' grade will not be counted towards his/her

earned credit. 'F' grade will not be counted for GPA calculation but will stay permanently on the Grade sheet and transcripts.

10. Distribution of Courses

(Ref. FSEO article 6): The study program for the B. Sc. Engg. (CCE) shall carry a total of 161 credit hours. Distribution of courses is shown in Table-3.

Table-3

Course type	Credit hours
University Requirement Courses	13
Humanities Courses	8
Basic Sciences with laboratory [Mathematics, Statistics, Physics and Chemistry]	25.5
Computer and Communications Engineering Courses (Including inter-disciplinary engineering courses)	114.5
(a) Theoretical 74 CH	
(b) General Viva-voce 1 CH	
(c) Laboratory 39.5 CH	
Total	161

11. Semester Work load:

Minimum Workload for a regular semester is **12** credit hours or its equivalent and maximum load is up to 28 credit hours. Since IIUC is following the **Open Credit Hour System**, a student may register the expected number of credits with the recommendation of his/ her respective **academic advisor** and the approval of the Head of the Department or the Dean of the Faculty or the Pro-Vice Chancellor as the case may be. But the semester workload must be consistent with the range of GPA. Advisable semester workload for the Faculty of Science and Engineering under Open Credit Hour System (OCHS) based on GPA is given in Table-4 (Ref. FSEO article 5.4):

Table- 4

RANGE of GPA	Maximum Load Allowed
3.75-4.00	28Cr.Hrs.
3.50-3.74	26Cr.Hrs.
2.75-3.49	24Cr.Hrs.
2.25-2.74	22Cr.Hrs.
2.00-2.24	20Cr.Hrs.
1.70-1.99	15Cr.Hrs.
Below 1.70 or Repeat Case (Due to very poor performance)	12Cr.Hrs

12. Rules for Promotion

(Ref. FSEO article -17):

12.1 Criteria for Semester Promotion:

- 12.1.1 No semester fail status would exist under open credit hour system.
- 12.1.2 If any student earns '**C+ (C plus)**' i.e. **50** or above grade for any course, the course should be credited.
- 12.1.3 The students must complete Pre-requisite Courses and previous incompletes or 'F' or 'W' grade courses before registration of advance courses.
- 12.1.4 Students who will not clear all prescribed courses of 1st & 2nd Semester within the 4th Semester he/she would not be allowed to get promoted/registered in the 5th Semester and students who will not clear all prescribed courses of 3rd & 4th Semester within the 6th Semester he/she would not be allowed to get

promoted/registered in the 7th Semester. Student can go for internship in the 7th / 8th Semester.

12.2 Criteria for Special Examination:

Special Final Examination has been **withdrawn from Spring-2008** for all students of Bachelor programs. If a graduating /last semester/outgoing student has an incompletes course only, he/she can complete the course/s according to the following rules:

- 12.2.1 If any student could not attend Final Examination in a course only **due to illness, accident o scoring of F grade**, he/she can complete the course by attending Special Final Examination. To the approval of Special Final Examination, the incumbent has to apply to the Pro-Vice-Chancellor or through the Head of the concerned Department and Controller of Examination within 72 hours of Examination held with necessary documents. After getting approval, the incumbent has to pay the **Special Final Examination fee**.
- 12.2.2 If any course remains unregistered or not repeated due to removal of the courses from syllabus or has not been offered in the last a few semesters, the course may be completed under special arrangement. To get approval of special arrangement/Independent Study, the incumbent has to apply to the Pro-Vice-Chancellor through the Head of the concerned Department and Controller of Examination subject to the availability of course teacher. The application period will be immediate after publication of Semester result. After getting approval, the incumbent has to complete registration by paying **the tuition fee double than that of the normal fees (based on credit hour)**. **There is no scope of special arrangement for the course /s which are offered by the department or center.**

12.3 Criteria for Repeating Courses

- 12.3.1 For 'F' grade holders the course must be repeated within the next 2 consecutive semesters. Pre-requisite courses should be repeated on priority basis.
- 12.3.2 The final grade will be computed in the Final Transcript and the previous grade /s will be marked with 'R' grade (as intake course) which has no effect on GPA or CGPA. 'R' is deleted from Final Transcript during graduation

12.4 Criteria for Failing in a Course:

- 12.4.1 A student, who fails in a course within specific requirements of the Faculty and the curriculum of his/her program, may repeat the same course if the course is classified as "CORE" or "REQUIRED" course.
- 12.4.2 Or, the fail student may replace the course with another one if it is classified as "SUPPORTIVE" or "ELECTIVE" or "OPTIONAL" as determined by the department or the faculty as the case may be.
- 12.4.3 Notwithstanding any other provisions of these Regulations, a graduating student who obtains the minimum CGPA 2.00, but fails in any course, may be allowed to re-sit for that course subject to the examination rules and approval of the authority concerned.

12.5 Criteria for Improvement of Grade:

- 12.5.1 The range of grade in that particular course should be "B-" (B minus).
- 12.5.2 That an application must be submitted to the Controller of Examination through the Head of the Department in order to repeat the course for the purpose of improvement at least two weeks prior to the dead line of registration and it has to be approved by the competent authority.
- 12.5.3 That the opportunity for improvement of grade shall be availed within two consecutive Semesters.
- 12.5.4 That payment shall be made in full amount for the course/s on credit hour basis.

12.6 Re-Evaluation of Examination Results:

- 12.6.1 If the awarding grade is in order but the student wants his/her answer script to be reevaluated, then a prescribed Form (available at ACAD) shall have to be filled in and submitted by the student to the University Board of Appeals through the ACAD.
- 12.6.2 Per Course a fee (as determined by the University Board Examination) must be deposited along with the Form.
- 12.6.3 **An appeal may be made** on any or all of the following grounds:
 - If a student strongly believes that he/she deserves higher marks than he/she got in the course in question.
 - If a student reasonably believes that the evaluation has been conducted improperly or a portion of his/her marks has not been counted.

13. Eligibility for Examination:

13.1 No student shall be eligible to take part in any Semester Final Examination unless:

- 13.1.1 He/she is officially registered in such a course; and
- 13.1.2 He/she has fulfilled the required percentage of attendance and other requirements.

13.2 Barring from Examination:

- 13.2.1 A student may be barred from taking examination if he/she fails to meet any of the above requirements (article 21.1) for eligibility to sit for an Examination. In such a case, the student may be given the chance to appeal for exoneration.
- 13.2.2 Unless otherwise recognized, any student debarred from any examination shall automatically receive a grade "Y" which is equivalent to an "F" for that course irrespective of course performance
- 13.2.3 In addition, the scholarship or financial assistance of students who are barred from the Semester Final Examination may be withdrawn or reduced by a certain amount as the University authority decides on case-by-case basis.

13.3 Cheating in Examination:

- 13.3.1 A student cheating in examination shall be deemed to have committed an offence and will be liable to disciplinary punishment.
- 13.3.2 Such punishment may be cancellation of the course in question, drop of the current semester, expulsion for an academic year or expulsion from the

University, based on the weight and gravity of the offence.

- 13.3.3 Student receives the expulsion from the university for cheating in examination cannot be readmitted. In addition, the student will be deprived of any financial assistance in the following semester as the university authority decides on case by case basis.

14. Graduation Requirements:

14.1 Pre-Graduate Requirements:

- 14.1.1 One Semester prior to graduation a student should submit a check list to Controller of Examination duly filled in.
- 14.1.2 Students intending for graduation should submit an application for graduation to Controller of Examination in the terminal semester in the University.

14.2 Academic Requirements:

- 14.2.1 Have passed all required and elective course as per program of curriculum.
- 14.2.2 Be an acceptable academic standing with a CGPA of at least 2.5.
- 14.2.3 Be free from any negative report from the University authority in general and academic Discipline Committee in particular.
- 14.2.4 Have fulfilled co-curricular activities.
- 14.2.5 Have fulfilled other University requirements

14.3 Transcripts:

14.3.1	Results of each semester are normally distributed to every student at the beginning of the following semester. The result is for student's reference only and not to be used for any official purposes. The result produces report including the grades of all courses for that semester, the GPA and CGPA.
14.3.2	Official Transcripts is issued before graduation and upon written request of a student who has paid up all fees. Partial transcripts may also be issued in the same manner to existing students. However, a fee is charged for partial transcript (or testimonial.) of each semester.
14.3.3	Final Transcript and Provisional Certificate may be withdrawn on payment of fee. Besides, Original certificate may be issued on payment of fee only. Charges will be applied for the re-issue of duplicate certificate and transcript also.

14.4 Release of Student 's Record:

Student's records are considered highly confidential. Therefore, a written consent from the student is needed before releasing information from his personal record to person outside the University. Information may be furnished to a student's parents or sponsor without such written consent. No information concerning a student's grades will be given over telephone.

15. Course Identification Plan:

For course identification, the following code plan has been adapted:

First digit stands for Year, Second digit stands for Semester and Third & Fourth digit stand for the course number (odd number has been assigned to theory course and the even number has been assigned to laboratory course). An example is given below:

16. Student Identification Plan:

For Student identification, the following code plan has been adapted:

First two digit stands for Year, Third digit stands for Semester (Spring or Autumn) and next digits for student serial number. An example is given below:

17. Programs of Study:

The B. Sc. (Engineering) program in the department of Computer and Communication Engineering consist of 80 courses carrying 161 Credit Hours. There are 9 University Requirement Courses (URC) carrying 13 credit hours, 4 Interdisciplinary Courses carrying 8 credit hours, 67 Core Courses carrying 131 credit hours and 6 Elective Courses carrying 12 credit hours. In the Core Courses there are 37 theory courses carrying 92 credit hours and 30 practical courses carrying 39 credit hours. In the elective courses there are 3 theory courses carrying 6 credit hours and 3 practical courses carrying 3 credit hours.

Total 161 credit hours have to be undertaken and completed by a student during 8 semesters. Duration of each semester is 6 months. Each course carries 100 marks. Of the total marks allotted to each course, 10 marks are for class tests/assignments/oral tests, 10 marks for attendance, 30 marks for mid-term examination and 50 marks for the final examination. Out of 100 marks for Laboratory courses, 50 marks is allotted for running assessment and 50 marks is for practical exam, viva, quiz etc. at the end of semester final examination

Marks distribution for projects/thesis and general viva-voce is as follows:

1) Project/Thesis evaluation by Supervisor-	40%
2) Project/Thesis evaluation by Examiner-	30%
3) General Viva-Voce-	30%
Total:	100%

18. Summary of Courses

Types of Courses	No. of Courses	Credit Hours
University Requirement Courses	09	013
Interdisciplinary Courses	04	008
Core Courses (Compulsory)	67 (Theory 37& Sessional 30)	131
Core Courses (Elective)	06 (Theory 3 & Sessional 3)	009
Total	86	161

19. Semester wise Summary of Courses

Course Code: UREL-1106
Course Title: ADVANCED ENGLISH
 Credit Hour: 2/ Contact Hour: 3 per week

Course Objectives:

On successful completion of this course, you will be able to:

The objective is to develop four basic skills of English (i.e. Listening, Speaking, Reading and Writing) to a level so that the students can comprehend lectures given in English, comprehend literary, non-literary, formal and informal texts and communicate effectively both orally and in written form. IELTS exam can be taken as a standard. Emphasis will be given for improving English comprehension and communication skill by practicing in the class room and by doing home works. Less emphasis will be given for teaching the basics of English grammar. Grammar will be taught with a view to correcting common mistakes and identifying the correct structure of a sentence.

Course Outcomes:

Students who successfully complete the course will be able to:

1. Comprehend the lectures delivered by the course teachers in English.
2. Comprehend the texts written in English.
3. Write answers in English using correct English.
4. Develop a confidence about the correctness of their own writing and speaking.
5. Identify their own mistakes in their writing and speaking and correct the same.

Course Contents:

Mid-term Exam: 30 Marks

Chapter: 1- Reading from the Prescribed Text: (Any one of the following texts will be chosen for midterm examination)

- Exercises in Reading Comprehension
 Edited by: E.L. Tibbits
 Longman Group Limited, Longman House
 Burnt Mill, Essex, UK
- Build up Your English, A.J. Glover, The English Language Book Society and J.M. Dents and Sons Ltd.
 London
- The Pilgrim's Progress (selected passages)
 John Bunyan
 William Collins Sons & Co. Ltd. London (part one)
- The Old Man and the Sea (selected passages)
 Earnest Hemingway
 Peacock Books
 B-2, Vishal Enclave, New Delhi-110027

Chapter: 2 - Passages in the Examination will be Unseen: Students will practice reading Dhaka Courier/daily newspaper/Passages for IELTS reading module at the lab.

Focus will be given on: Strategies of reading, scanning for specific details and skimming for general understanding, identifying main and supporting ideas, summarizing, understanding argument, identifying opinion/attitude and making inferences, analysis and interpreting variety of texts, techniques and strategies for improving comprehension skills, practicing comprehension from literary and non-literary texts, techniques of speed reading.

The following websites will be used:

- <http://www.dhakacourier.com.bd/>
- <http://ielts-up.com/reading/ielts-reading-practice.html#academic>
- <https://allmedialink.com/english-newspaper-of-bangladesh/>

Course Code: URED-2302
Course Title: Sciences of *Qur'an* and *Hadith*

Credit Hour: 1/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. To make the students familiar with the basic sciences of Qur'an & Hadith to understand them properly.
2. To provide them with proper knowledge to establish their authenticity and remove misconceptions concerning them.
3. To achieve the main goal of the University in Islamization of Knowledge through enlightening the students with revealed knowledge of the Qur'an and Hadith.

Course Outcomes:

Students who successfully complete the course will be able to:

1. The students will have knowledge of the status of Qur'anic verses and Hadithic text.
2. They will be able to establish the authenticity of Qur'an and Sunnah.
3. To have inspiration to achieve knowledge from the Qur'an and Sunnah directly

Course Contents:

Mid-term Exam: 30 Marks

Chapter – 01: Sciences of Qur'an:

(1) Definition of the Qur'an Literally and Terminologically (2) Various Names and Attributes of the Holy Qur'an and their Significance (3) Characteristics of the Holy Qur'an (4) Central Subject Matter & the Main Themes of the Holy Qur'an (5) The necessity of the Holy Qur'an (6) The authenticity of the Holy Qur'an.

Chapter – 02: Wahi (Revelation) of the Holy Qur'an:

(1) Meaning of Wahi (2) Various classifications and procedure of Wahi (3) Stages of revelation of the Holy Qur'an (4) Gradual revelation of the Holy Qur'an and the wisdom behind it (5) The First and the Last Revelation.

Chapter – 03: The Ayah and Surah of the Holy Qur'an:

(1) The Ayah of the Qur'an: Definition of Ayah. The Number of Ayah, words and letters of the Holy Qur'an. The Arrangement of the Ayah of the Holy Qur'an (2) The Surah of The Qur'an: Definition of Surah. The Arrangement of Surah of the Holy Qur'an. The classification of Surah of the Holy Qur'an.

Final Exam: 50 Marks

Chapter – 04: Makki & Madani Revelations:

(1) The Definition of Makki and Madani (2) The Characteristics of Makki and Madani Revelations (3) The benefits of knowing Makki and Madani Revelations.

Chapter – 05: Preservation, Compilation & Asbabunnuzul (Revelational Background):

(1) Preservation & Compilation of the Holy Qur'an (2) The Causes of Revelation (Asbabunnuzul): The Definition of Asbabunnuzul. The classification of Asbabunnuzul. The benefits of Knowing Asbabunnuzul.

Chapter – 06: Al-Naskh (Abrogation) & I'jaz (inimitability) of The Qur'an:

(1) Abrogation (Al-Naskh) in the Holy Qur'an: Definition of Naskh. The proofs of Naskh. The Classifications of Naskh. The benefits of knowing Naskh (abrogating) and Mansukh (abrogated) verses. (2) The Miraculous Nature of The Qur'an (I'jaz Al-Qur'an): Definition of I'jaz. The Proofs of I'jaz. Various aspects of I'jaz Al-Qur'an.

Chapter – 07: Sciences of Hadith:

(1) Definition of Sunnah (2) Difference among Qur'an Sunnah and Hadith Qudshi (3) The Position, importance and authority of Sunnah in Islamic Shari'ah (4) Explanation of some important terms of Sunnah: Isnad/ Sanad, Matn, Rawee and Riwayah, Al-jame', Al-Musnad, Al-Sahih, Al-Sunan, Sahihayn, Muttafaun'Alayh, Al-kutub As-Sittah...etc. (5) Collection & Compilation of Sunnah.

Chapter – 08: The classification of Hadith and fabrication in Hadith:

(1) The classification of Hadith: (a) According to the reference to a particular authority (b) According to the links in the Isnad (c) According to the number of narrators involved in each stage of the Isnad (d) According to the reliability and memory of the narrator. (2) Fabrication in Hadith: (a) Definition of Fabrication (b) Causes and consequence of fabrication (c) Some examples of commonly used fabricated Hadith in our society.

Course Title: Comparative Religion (for Non-Muslims)

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

On successful completion of this course, you will be able to:

This course is designed to engage the students in the different types of religions and increase their knowledge. This course will feature the Muslim, Christian, Hindu, Buddhist and Jewish religious origins, customs and traditions, and some basic principles. These topics will require solutions and teamwork. Every student will be partnered up with another student for the duration of the course.

Course Outcomes:

Students who successfully complete the course will be able to:

1. Students will demonstrate understanding of the central beliefs and concepts of major living religious traditions of the world, including Hinduism, Buddhism, Judaism, Christianity, and Islam.
2. Students will demonstrate familiarity with the structure and ritual life of religious communities, including significant holidays and rituals.
3. Students will demonstrate a grasp of the methodology of the study of religion.
4. Students will develop skills in critically analyzing religion and comparing particular aspects of religious traditions.
5. Students will develop skills in reading source texts as documents of religious life.
6. Students will develop skills in observing and critically analyzing religion in the contemporary world.
7. Students will be aware of how to decrease Islam phobia among the non-Muslim community and increase mutual relationship among them.

Course Contents:

Mid-term Exam: 30 Marks

Chapter – 01: Concept of religion:

- a) Definition of religion,
- b) Significance, necessity and characteristics of religion
- c) Approaches to the study of religions (Historical, Anthropological, Sociological, Philosophical and Phenomenological etc.).

Chapter – 02: Origin and Development of Major Religions:

- a) Basic history of major religions (Judaism, Christianity, Hinduism, Buddhism and Islam)
- b) Founders and profounder of religions.

Chapter – 03: The Features of Major Religions and Holy books and Sacred Texts:

- a) The distinguishing features of major religions (Judaism, Christianity, Hinduism, Buddhism and Islam).
- b) Holy books and sacred texts of major religions.

Final Exam: 50 Marks

Chapter – 04: Religious rituals, festivals and Holy places:

- a) Rituals of major religions.
- b) Festivals of major religions.
- c) Holy places of major religions.

Chapter – 05: The Comparative study of God in major religions:

- a) Concept of God in Judaism.
- b) Concept of God in Christianity.
- c) Concept of God in Hinduism.
- d) Concept of God in Buddhism.
- e) Concept God in Islam.

Chapter – 06: The Comparative study of religious mentors and prophets in major religions:

- a) Necessity of Prophets and Spiritual guides for human life.
- b) Comparative study of prophecy and religious mentorship in famous religions.

Chapter – 07: The Comparative Study of Life after Death in major religions:

- a) Concept of Death in different religions.
- b) Concept of Day of Judgment in different religions.
- c) Concept of Heaven and Hell in different religions.

Chapter – 08: The understanding of Man and Universe in major religions:

- a) The purpose of Human being.
- b) The purpose Universe.

Chapter – 09: The common values in major religions:

- a) Ethics and Morality.
- b) Evil.
- c) Justice.
- d) Destiny and Luck.
- e) Religious diversity.
- f) Non-violence and Peaceful co-existence.
- g) Harmony and Interfaith dialogue.
- h) Social Justice and Human Ideological rights.

Course Code: URBS-4802

Course Title: Bangladesh Studies and the History of Independence

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

The objective of this study is to create awareness among the students about the History and Heritage, Geography and Environment, People and Society, Politics and Constitutional Development, International Relations, Economics and Natural Resources, Education and Literature, Philosophy and Religion, Art and Culture of Bangladesh and such other conceptions and ideas that are significantly related to the people and society of Bangladesh with a view to develop patriotism among the learners.

Course Outcomes:

Students who successfully complete the course will be able to:

By studying this course, the learners will be able to have a comprehensive and clear concept about the historical developments of Bengali nation from pre-historic age until the independence from British government in 1947. The students will also be able to understand the geographical characteristics of Bangladesh, Origin of its people, Population growth, distribution and challenges, Political developments and crises of Democracy in Modern Bangladesh, Foreign Policy and international relations of Bangladesh, Constitutional development of Bangladesh. This comprehensive study will undoubtedly increase patriotism among the students towards the beloved Motherland Bangladesh. The learners will also be able to appreciate any significant national issue in context of demand of time and future integrities.

Course Contents:

Mid-term Exam: 30 Marks

Chapter One: Outline study of Bangladesh Geography: Location, Area, Boundary, Physiographical features, River System, Forest and Climate. Geographical Impact on the People and Society.

Chapter Two: The People of Bangladesh: Origin of the People, Population growth and composition, Literacy, Population challenges and prospects for Bangladesh.

Chapter Three: History and Society of Ancient Bengal: The old Regions of Bengal, Pre-historic and Pre-Aryan Civilization in Bengal, Bengal under Gupta, Pala and Sena Dynasties, Socio-economic condition of Bengal before the advent of Islam.

Final Exam: 50 Marks

Chapter Four: History and Society of Bengal under Muslim Rule (1204-1757): Advent of Islam in Bengal and the Muslim conquest, its impact on the people and society, origin and composition of the Muslim society in Bengal, impact of Sufism, the consolidation of Muslim rule (1204-1757), educational and literary development in Muslim Bengal, the evaluation of over-all impact of Muslim rule on the people and society of Bengal.

Chapter Five: History and Society of Bengal under British Rule (1757-1947): The introduction of British rule in Bengal, British policy towards economy and education. A brief discussion on the socio-religious reform movements in Bengal and the struggles for freedom from the British Colonialism, Intellectual Movements, Partition of Bengal and its impact, formation and role of Muslim League and Congress, development of Bengali Literature, rising of the nationalism movements and the creation of Pakistan, impact of British administrative policy on the society of Bengal.

Chapter Six: Constitutional Development of Bangladesh: Background to the constitution, characteristics, contents, constitutional organizations, amendments and administrative structure of Bangladesh.

Chapter Seven: Political Developments of Modern Bangladesh: formation and role of the major political parties, regime analysis of modern Bangladesh, critical issues of Bangladesh politics including Caretaker Government System, Students Politics, Crises of Democracy, etc.

Chapter Eight: Foreign Policy and International Relations of Bangladesh: emergence of Bangladesh and the global super powers, principles of foreign policy, international relations of Bangladesh, the role of Bangladesh in the international organizations such as the UN, OIC, SAARC, ASEAN, BIMSTEC etc. Millennium Development Goals (MDGs), Sustainable Development Goals (SDGs) and Bangladesh.

Chapter Nine: Economic condition of Bangladesh, minerals and natural resources of Bangladesh.

Chapter Ten: Socio-cultural problems and prospects of Bangladesh.

21.B. Synopsis of Interdisciplinary Courses

Course Code: ACC-2401
Course Title: FINANCIAL AND MANAGERIAL ACCOUNTING
 Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. Learn about the term "Financial and Managerial Accounting"
2. Analyzing financial statement of an organization.
3. Understand the bookkeeping system.
4. Auditing to errors correction in the trial balance.
5. Develop budget and planning.
6. Create the bank reconciliation statement.

Course Outcomes:

Students who successfully complete the course will be able to:

- 1) Analyze financial statement of an organization.
- 2) Develop budget and planning of an organization.
- 3) Develop and refine the bank reconciliation statement.
- 4) Create the bank reconciliation statement.
- 5) Apply the bookkeeping system.

Course Contents:

Mid-term Exam: 30 Marks

1. **Preliminaries:** Introduction to Accounting, History and development of accounting thought, types of accounting, Accounting Principles & ethics, Accounting Equation & Transaction Analysis.
2. **Introduction to Financial Statements. Recording Business Transactions:** The Accounts & their types.
3. **Double-Entry Book keeping system;** Invoice, discount from purchase price, purchase return and allowances, Sale of inventory, sales discount, sales returns and allowances; Journals, ledger & Trial balance.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Correcting errors in the trial balance. The Adjusting and Closing Procedure:** The adjusting process, Accrual versus cash basis Accounting, Preparation of Adjusted trial balance and financial statements, Closing entries & Reversing entries.
2. **Using accounting information in decision-making. Accounting in practice:** Worksheet. Purchase book, sales book, cashbook, petty cashbook, etc. Control accounts and subsidiary accounts. Bank reconciliation statement.

Part – B: 30-Marks

1. **Cost In General:** Cost in general: objectives & classifications; Costing Journals; Job order costing, Process costing & Overhead costing, cost sheet; Cost of goods sold statement.
2. **Marginal & Relevant costing:** Marginal costing tools and techniques, cost-volume-profit analysis.
3. **Guidelines for decision-making. Budget:** Capital budgeting; planning, evaluation & control of capital expenditures.

Reference Books:

2. Adolph Matz & Milton F. Usry, *Cost Accounting- Planning and control*
3. Sankar Prasad Basu & Monilal Das, *Practice in Accountancy*
4. Jerry J. Weygandt, Donald E. Kieso & Paul D. Kimmel, *Accounting Principles*.
5. Jay M Smith & K Fred Skousen, *Intermediate Accounting*.
6. Noreen & Garrison *Managerial Accounting*, 11th Edition

Course Code: ECON-3501
Course Title: PRINCIPLES OF ECONOMICS

Credit Hours: 2 / Contact Hours: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

- Understand a broad range of economic concepts, theories and analytical techniques that will cover the understanding of both micro and macro- economics.
- Learning and grasping the economic behavior of human and exposed to economic way of thinking.
- Understand the markets of goods and services and policy choices that affect these markets.
- Introducing to GDP, growth, instability, monetary policy, fiscal policy, and economic planning.

Course Outcomes:

Students who successfully complete the course will be able to:

- Demonstrate knowledge of the fundamental concepts and theories of micro and macro-economics.
- Identify the key indicators of economic growth and how to use the indicators for national and international comparisons.
- Identify and explain the key macroeconomic policies.

Course Contents:

Mid-term Exam: 30 Marks

- 1. Introduction:** Definition of economics, Scope and utility of studying economics.
- 2. Micro-economics:** The theory of demand and supply and their elasticity, Price determination, Nature of an economic theory, applicability of economic theories to the problems of developing countries. Indifference curves technique, Marginal utility analysis,
- 3. Production:** Production function, types of productivity, the nature of Isoquants and Isocosts, Rational region of production of an engineering firm. Euler's theorem

Final Exam: 50 Marks

Part – A: 20-Marks

- 1. Market:** Concepts of market and market structure. Cost analysis and cost function. Small scale production and large-scale production, Optimization, Theory of distribution.
- 2. Macroeconomics:** Savings, investment, employment, National income analysis, Inflation.

Part – B: 30-Marks

- 1. Economic Policy:** Monetary policy, Fiscal policy and trade policy with reference to Bangladesh.
- 2. Economics of development:** Dimensions of development, Relevance of theory, the employment problem, Human resource development
- 3. Economics of planning:** Planning and market, Policy models, Planning experience.

Course Code: MGT-3601
Course Title: INDUSTRIAL MANAGEMENT

Credit Hours: 2 / Contact Hours: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. Understand the basic principles of management and four functions of managers.
2. Being familiar with the principles of organizing and manpower development.
3. Interpret financial statements and other financial reports of industrial companies.
4. Design different combinations of systems for management control in an organization.
5. Introducing different industrial laws relating to employee rights and work environment.
6. Understanding the industrial production system and quality control.
7. Understanding the basic principles of marketing management.

Course Outcomes:

Students who successfully complete the course will be able to:

1. Comprehend how an organization is formed and managed.
2. Understand the different roles of the owners, employees, board of directors and other stakeholders in an organization.
3. Make plan and budget in different functional area of the organization i.e. marketing, production etc.
4. Understand the legal rights and duties of the workers in a workplace.
5. Know about the copyright, patent right and validity, different aspect of quality assurance etc.

Course Contents:

Mid-term Exam: 30 Marks

1. **Preliminaries:** Definition, Importance of management, Evolution, Functions of management, Introduction to Industry & organizational management.
2. **Organization and Its Environment:** Environmental context of the Organization.
3. **Organizing & staffing:** Theory & structure, Co-ordination, Span of control, Authority delegation, Formal & Informal Groups, Committee and task force, Manpower planning & Development.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Cost & Financial Management:** Investment analysis, benefit-cost analysis & its implications in decision making. Cost planning & Price Control, budget & budgetary control, development planning process
2. **Marketing management:** Concepts, strategy, sales promotion, Transportation & Storage. Technology management: Management of innovation & changes, technology lifecycle.

Part – B: 30-Marks

1. **Production Management:** Designing operations system in production and service-oriented industry. Product layout, process layout, & fixed position layout. Organizational technologies: automation, computer-assisted manufacturing, flexible manufacturing system, and robotics. TQM, bench marking, ISO 9000, SQC.
2. **Industrial law:** Law of contract, sale of goods, Hire and purchase, Negotiable instrument Act, patent right and validity. Factories act, Industrial relations ordinance, workmen's compensation act.
3. **Professional Practice:** Tender documentation, General conditions of tender, Technical Specification, Purchase & procurement rules-2004, Technical evaluation, Copyright, Intellectual property right.

Course Code: LAW-4721

Course Title: PROFESSIONAL ETHICS AND ENVIRONMENTAL PROTECTION LAW

Credit Hours: 2 / Contact Hours: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

The purpose of the course is to give students an appreciation of the role of law in the society of their profession and signifying the development process of the Engineering ethics and analyzing the issues of cyber law with regard to the existing regulation of cyber-crime that will better equip them to deal with the challenges of globalization.

Course Outcomes:

Students who successfully complete the course will be able to:

Engineering law or law in engineering is the empirical study of the application of laws and legal strategy in engineering. Applied law aims to explain how law interacts with industry. The current school of thought within the academic community of lawyers and engineers is the pragmatic paradigm. Commonly, professionals have a Bachelors in Engineering and a Bachelors in Law, and increasingly commonly a Masters of Business Administration. Pragmatic application of laws means the empirical study of how a corporate legal framework should be adopted.

Course Contents:

Mid-term Exam: 30 Marks

1. **Law Basics:** Definition and Theories of Law, Nature and Scope of Law, Purposes of Law, Sources of Law, School of Jurisprudence, Theories of Punishment, Meaning of Rights and Duties, Legal Personality, Ownership and Possession, Administration of Justice.
2. **Law of Contract:** Definition and Essential Elements of Contract, Principles of Law of Contract, Law of Agency, Law of Partnership, Law of Sale of Goods, Law of Negotiable Instruments, Law of Insurance and Insolvency.
3. **Labour Law:** The Scope and Sources of Labour Law, Elementary Principles of Labour Law, Labour Laws in Bangladesh, Law in relation to wages, working hours and leave, Law in relation to health, safety and other condition to work.
4. **Company Law:** The Companies Act with special reference to the amendment and ordinances applicable in Bangladesh. Law relating to the formation, incorporation, management and winding up of companies

Final Exam: 50 Marks

Part – A: 20-Marks

1. **History and development of Engineering Ethics:** History and Development of Engineering Ethics, Meaning of Ethics and Engineering Ethics, Applied Ethics in Engineering, Human Qualities of an Engineer, Obligation of an Engineer to the clients and to other Engineers, Measures to be taken in order to improve the quality of engineering profession.
2. **Ethical Expectation:** Employers and Employees inter-professional relationship, maintaining a commitment of Ethical Standards, Desired characteristics of professional code.

Part – B: 30-Marks

1. **Cyber Law Introduction:** Definition and Nature of Cyber Law, The need for cyber law, Regulation of Technology and Internet, The Internet and Problems of Geography and Sovereignty, Freedom of Expression on Internet.
2. **The Relationship between Legal and Technological Regulations:** Intellectual Property, Copy rights, Trade Marks, Industrial Designs, Electronic and Digital Signature, Electronic Contract.
3. **Liabilities of Internet Intermediaries:** Defamatory Contents, Privacy, copy rights, infringement. Liabilities relating to electronic financial transaction
4. **Cyber Crime:** Definition, Nature and Scope of Cybercrime, Regulation of Cyber Crime, Offences and Punishment of Technology Crimes.

Recommended Books:

1. Essential Laws for Professionals by Mohammadullah Mojaher
2. Mercantile Law by M. C. Kuchhal
3. Fundamentals of Company Law by A. I. Khan
4. Bangladesh Labour Code, 2006 by Abdul Halim

21.C. Synopsis of Core Courses

Course Code: MATH-1101
Course Title: Mathematics-I (Differential and Integral Calculus)

Credit Hours: 3 / Contact Hours: 3 per Week

Course Objectives:

Calculus divides naturally into two parts, differential calculus and integral calculus. Differential calculus is concerned with finding the instantaneous rate at which one quantity changes with respect to another, called the derivative of the first quantity with respect to the second. Integral calculus deals with the inverse of the derivative, namely, finding a function when its rate of change is known.

The objective of this course is to provide the students with an understanding of how to find out the rate of change of various functions, and to determine the area and volume of different types of objects. This course aims to introduce the student with the various techniques of differentiation and integration.

Course Outcomes:

Students who successfully complete the course will be able to:

ILOs / COs	Description
ILO / CO: 1	For complex Engineering problems, it is essential to get Knowledge of the limit, continuity, and differentiability, power series, Rolle's Theorem, Mean value theorem, Taylor, and McLaurin's series. Also the need concept of the partial derivative and Integration.
ILO / CO: 2	By using the above mentioned foundational mathematical information; One can implement it to solve the mathematical problems, which is expressing engineering principles.

Course Contents:

Mid-term Exam: 30 Marks

- 1. Functions:** Limit of Functions, continuity and differentiability, physical meaning of derivative of a function, Indeterminate Form.
- 2. Ordinary Differentiation:** Differentiation, successive differentiation and Leibniz theorem,
- 3. Expansions of Functions:**
 - a. Rolle's theorem, mean value theorem
 - b. Taylor's and Maclaurian's Formulae

Final Exam: 50 Marks

Part – A: 20-Marks

- 1. Partial Differentiation:** Partial Differentiation, Euler's formula, Maxima and minima.
- 2. Indefinite integral:** Physical meaning of integration of a function, method of Substitution, Integration by parts, special trigonometric functions and rational fractions different techniques of integration.

Part – B: 30-Marks

- 1. Definite integral:** Fundamental theorem, general properties, and evaluations of definite integral and reduction formula, definite integral as the limit of a sum, Integration by successive reduction, Gamma and Beta Function
- 2. Multiple Integral:** Double Integral, Evaluation of double integral, Change of order of integration, triple Integral, Application of double and triple integral.
- 3. Integration by Revolution:** Determination of length of curves, Areas of plane region and Areas of surfaces of solids of revolution, Volumes of solids of revolution.

Text Book:

1. Mohammad, Khosh; Bhattacharjee, P. K.; Latif, Md. Abdul "A textbook on differential calculus", GonithProkashon, 10th edition, 2001.
2. Mohammad, Khosh; Bhattacharjee, P. K.; Latif, Md. Abdul "A textbook on integral calculus : with differential equations ", GonithProkashon, 9th edition, 2001.

Reference Book:

1. Thomas, Finey "*Calculus and analytical geometry*"
2. K. A. Stroud "*Engineering Mathematics*"
3. Howard Anton "*Calculus A New horizon*"
4. Erwin Kreyszig "*Advanced Engineering Mathematics*"
5. Abu Yusuf "*differential calculus*"
6. Das and Mukharjee "*differential calculus*"
7. Das and Mukharjee "*integral calculus*"

Course Code: MATH-1201
Course Title: Mathematics-II (Geometry and Differential Equations)

Credit Hours: 3 / Contact Hours: 3 per Week

Course Objectives:

Geometry deals with space and shapes. The objective of this course is to develop an understanding of the visual ability, to enable the students to make the design of solving problems, and to improve the skills of reasoning. Through this course student will learn how to solve different types of differential equations.

By applying geometry students will be able to think outside the box. After completing this course students will be able to analyze the real-world problems related to population dynamics, mixtures, growth and decay, heat transfer, electronic circuits, mechanical vibrations, transport phenomena and Industrial Organization through a set of differential equations. A student will be able to know how to formulate the mathematical model and how to interpret the results

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Reflect a basic understanding of change of axes, system of circles, Pair of straight lines and their properties, rectangular co-ordinate System, coplanar lines, equation of planes and sphere, basic idea of finding shortest distance.
ILO / CO: 2	Developing ability to be manipulated and identify the linear, nonlinear, partial and ordinary differential equations and solve the complete solution of a differential equation with constant coefficients .Applying the ordinary and partial differential equations to solve the real world problems such as Electrical Circuits problems, Growth and Decay Problems, Temperature Problems, Falling Body Problems and Dilution Problems.

Course Contents:

Section-A (Mid-term: 30 Marks)

- Two-Dimensional Geometry:** Change of Axes, Pair of straight lines, General equation of second degree presents a pair of straight lines, Properties of Pair of straight lines, System of circles.
- Three-dimensional Geometry:** Rectangular co-ordinate System, Direction cosines, Direction ratios, Projections, Equation of planes, Different forms of planes.
- Straight lines in three-dimension,** Angle between two lines, Angle between a lines and a plane, coplanar lines and Shortest distance, Spheres.

Section-B (Final Exam: 50 Marks)

Group-A (20 Marks)

- First order differential equation:** Definition, solution of first order and first-degree differential equation with initial conditions, Solution of Linear differential Equation, Separable Equations, homogeneous equations, Bernoulli Equation, Exact Differential equations, Integrating Factors, Boundary Value Problems.
- Higher order Differential equations with constant coefficients:** Solution of higher order homogeneous differential equations, Solution of non-homogeneous differential equations, Auxiliary Equations, Complementary function and particular integral

Group-B (30 Marks)

- Bessel's functions,** Legendre's polynomials and their properties, Linear differential Equation of second degree using Method of variation of parameter & Method of Undetermined coefficients.
- Linear & Non-Linear Partial Differential Equations:** Elimination of arbitrary constants and functions, Lagrange's method, Charpit's method. Solving linear partial differential equations with constant coefficients, Complementary function and particular integrals, Short method.
- Physical Applications:** Solution of Practical (Real world) problems using differential equations such as Growth and Decay Problems, Temperature Problems, Falling Body Problems, Dilution Problems,

Electrical Circuits problems, Orthogonal Trajectories, Spring Problems, Buoyancy Problems, Classifying Solutions etc

Text Books:

Reference Books:

- [1]. Stroud, Kenneth Arthur, and Dexter J. Booth. *Engineering mathematics*. Macmillan International Higher Education, 2013.
- [2]. Eisenhart, Luther Pfahler. *Coordinate geometry*. Courier Corporation, 2005.

Course Code: MATH-2301**Course Title: Mathematics-III (Matrices, Linear System of Equations and Vector Analysis)**

Credit Hour 3 / Contact Hour: 3 per week

Course Objectives:*This course will:*

1. Present basic concepts of matrices and matrix algebra.
2. Present methods of solving systems of linear equations.
3. Present basic concepts of vector spaces.
4. Present concepts of linear transformations.
5. Present the concept of and methods of computing determinants.
6. Present methods of computing and using eigenvalues and eigenvectors.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Demonstrate the basic idea of vector spaces, subspaces, Linear dependence and independence of vectors, Linear mappings, and Inner product spaces and be able to find the eigenvalues and eigenvectors of a square matrix using the characteristic polynomial and will know how to diagonalize a matrix. Applying these to solve the linear algebra in electric network.
ILO / CO: 2	Get the basic understanding about scalar and vectors, dot Product, cross product derivative of vectors, vector integration. Analyze complex engineering problems be able to know gradient, divergence, curl and their physical significance and to learn the Greens, Gauss & Stocks theorem and their applications and be familiar with vector components in spherical and cylindrical systems.

Course Contents:**Mid-term Exam: 30 Marks**

1. **Vector Spaces and Subspaces:** Definition of vector spaces, subspaces, basic theorem, Linear combinations of vectors, spanning set, Linear dependence and independence of vectors.
2. **Basis and Dimension and Linear Mappings:** Basis and Dimensions of Vector spaces, Sums and Direct sums of subspaces. Mappings, Linear mappings, Kernel and image of a linear mapping, Singular and nonsingular mappings, Linear mapping and systems of linear equations.
3. **Inner Product Spaces:** Inner product spaces, Cauchy-Schwarz inequality, Orthonormal sets, Gram-Schmidt orthogonalization process, and Application of Linear algebra in electric network.

Final Exam: 50 Marks**Part – A: 20-Marks**

1. **Matrix and Linear System of Equations:** Vector presentation by matrix, different types of matrices, algebraic operations on matrices, adjoint and inverse of a matrix, augmented matrix, row operation method, rank of Matrices, some problems, Normal Vector, Ortho normal Vectors, Orthogonality, Echelon form, consistency and inconsistency, solution of homogeneous and non-homogeneous linear system of equations.
2. **Characteristic equation and Diagonalization:** Eigen values and eigenvectors, characteristic polynomial, Caley-Himilton theorem, Diagonalization of matrices and symmetric matrices, Characteristics roots.

Part – B: 30-Marks

4. **Vector analysis:** Scalar and vectors, operation of vectors, vector addition and multiplication - their applications. Scalar Field, Vector Field, Dot Product, Cross product, Triple Product, Derivative of vectors and problems.
5. **Del operator and Vector Integration:** Del operator, gradient, divergence and curl and their physical significance, Line Integrals, physical significance of Vector integration and Problems.
6. **Vector's Theorem: Greens, Gauss & Stocks theorem and their applications, Vector components in spherical and cylindrical systems.**

Text Book:

1. Richard Bronson Gabriel B. Costa "*Linear algebra*"

2. H. K. Das "*Advanced Engineering Mathematics*"

Reference Books:

1. Seymour Lipschutz (SOS) "*Linear Algebra*"
2. Murray R. Spiegel(SOS) "*Vector Analysis*"
3. P.N. Chattarjee "*Matrices*"
4. Schaum's outline series "*Linear algebra*"
5. Schaum's Outline Series "*Matrices*"

Course Code: MATH-2401
Course Title: Mathematics-IV (Complex Variable Fourier Series, Laplace Transform & Fourier transform)

Credit Hours: 3 / Contact Hours: 3 per Week

Course Objectives:

The course provides students with an understanding of how to analyze Fourier series, Fourier Transform, and Laplace Transform. It includes a discussion frequency spectrum, harmonics of complex signal, complex functions.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Demonstrate the basic idea of analyze complex variable, Fourier Series, Laplace Transform & Fourier transform.
ILO / CO: 2	The advancement of the knowledge of Complex variables, Fourier Series, Laplace Transform & Fourier transform, are implemented in engineering problem interpretation and applicability by using the mathematical formulations.

Course Contents:

Mid-term Exam: 30 Marks

- 1. Complex Valued Functions:** Complex Number, De-Moivre's Theorem, Complex mapping, Linear Transformation: translation, magnification and rotation, Non-linear transformations: inversion, bilinear. Set theory: Function, Relation etc.
- 2. Complex Differentiation:** Differentiation of a complex function, Analytic function, Singularities, the Cauchy-Riemann Equations, harmonic functions
- 3. Complex Integration:** Complex Path Integrals, closed contour, Cauchy's Theorem, The Residue Theorem, Poles

Final Exam: 50 Marks

Part – A: 20-Marks

- 4. Fourier Series:** Physical Significance of Fourier series, Periodic Signal, Trigonometric form and Complex form of Fourier series, Fourier Integral, Frequency Spectrum, Piecewise Continuous waveforms, Even symmetry, Odd symmetry, Half-wave symmetry, Phase Spectrum, Sketch different types of Periodic Signals, Application of Fourier Series
- 5. Convolution:** convolution theorem, convolution sum, convolution Integral

Group-B (30 Marks)

- 6. Laplace transforms:** Unit Step Function, Impulse Function, Ramp Function, Sketch Waveform, Derive Laplace transform from Fourier transform, the Laplace transforms of different functions, shifting and change of scale property, Laplace transforms of derivatives, Solution of Differential Equations by Laplace Transforms, inverse Laplace transforms
- 7. Fourier Transform:** A-periodic Signal, Fourier transforms, Inverse Fourier Transform
- 8. Fourier Analysis** using MATLAB

Course Code: PHY-1101**Course Title: PHYSICS-I (Mechanics, Waves, Optics, Heat and thermodynamics)**

Credit Hours: 3/ Contact Hours: 3 per Week

Course Objectives:

This course is designed to provide students in Applied Science who wish to study engineering at university with an enhanced background in order to improve their chances of success in their chosen program. The material will be presented using the normal mix of lectures and laboratory experiments and demonstrations. This course objective is also to:

1. Study some of the applications of physics to technology and other scientific fields.
2. Give a solid grounding in basic physics that will serve as a basis for further study in Engineering.
3. Develop analytical and mathematical skills that will be applicable to many scientific endeavors.
4. Demonstrate the application of the scientific method through laboratory experiments.
5. Develop an appreciation for how scientific measurements are made.
6. Assess the role of physics, in helping us to better understand the complex, technological society.

Course Outcome:

ILOs / COs	Description
ILO / CO: 1	Demonstrate an understanding of mechanics, waves, optics, heat and thermodynamics.
ILO / CO: 2	Apply basic physics laws and formulae to complex cases like; Fly wheel, Elastic bending, forced oscillation, Compound Pendulum, Heat engine, Polarization etc.

Course Contents**Mid-term Exam: 30 Marks**

1. **Dynamics of Rigid Body:** Linear motion of a body as function of time, position and velocity, momentum, conservation theorem of momentum and energy, collision and torque, center of mass of rigid body, rotational kinetic energy, fly wheel, axes theorems and their applications.
2. **Gravity and Gravitation:** Definitions, compound pendulum, gravitational potentials and fields and relation between them, potential due to spherical shell, escape velocity and Kepler's law of planetary motion.
3. **Elasticity:** Hooke's law, relation between different elastic constants, bending of beams, cantilever, determination of Young's modulus and its engineering applications.

Final Exam: 50 Marks**Part – A: 20-Marks**

1. **Surface Tension:** Definitions, cohesion, adhesion and molecular range, molecular theory of surface tension, capillarity, angle of contact, expression for surface tension, relation between surface energy and surface tension.
2. **Fluid Dynamics and Viscosity:** Stream line and turbulent motion, equation of continuity, energy of a liquid in motion, Bernoulli's theorem, viscosity, coefficient of viscosity, Stoke's law.

Part – B: 30-Marks

1. **Waves and Oscillations:** Waves in elastic media, standing waves, Sound waves, beats and Doppler's effect in sound, simple harmonic motions, total energy and average energy, damped and forced vibration, resonance.
2. **Thermodynamics:** Thermodynamic system, first and second law of thermodynamics and their applications, the thermodynamic temperature scale, Carnot's heat engine, the efficiency of engine, combined first and second law of thermodynamics, entropy and refrigerator.
3. **Optics:** Theories of light, interference of light, Young's double slit experiment, Fresnel and Fraunhofer diffraction, diffraction of single slit, polarization of light, Production and analysis of polarized light, Brewster's law, Malus' law.

Course Code: PHY-1201**Course Title: PHYSICS- II (Electromagnetism, Properties of Matter & Modern Physics)**

Credit Hours: 3 / Contact Hours: 3 per Week

Course Objectives:

This course is designed to provide students in Applied Science who wish to study engineering at university with an enhanced background in order to improve their chances of success in their chosen program. The material will be presented using the normal mix of lectures and laboratory experiments and demonstrations. This course objective is also to:

1. Study some of the applications of physics to technology and other scientific fields.
2. Give a solid grounding in electromagnetism, Structure of matter and modern physics that will serve as a basis for further study in Engineering.
3. Provide knowledge and to develop an understanding of modern physics.
4. Develop analytical and mathematical skills that will be applicable to many scientific endeavors.
5. Demonstrate the application of the scientific method through laboratory experiments.
6. Develop an appreciation for how scientific measurements are made.
7. Assess the role of physics, in helping us to better understand the complex, technological society.

Course Outcome:

ILOs / COs	Description
ILO / CO: 1	Demonstrate an understanding of Electricity & Magnetism, Alternating Current, Solid state physics, Modern Physics & Relativity.
ILO / CO: 2	Apply basic physics laws and formulae to complex cases like; Gauss's law for dielectric material, Biot-Savart law for solenoid, toroid, Ampere's law, Faraday's laws, Crystal lattice formation for solid state electronic materials, Photo-electric and Compton effect etc.

Course Contents:**Mid-term Exam: 30 Marks**

1. **Charge and Electric Potential:** Electric charge, conductors and insulators, Coulomb's law, electric field, Electric field strength, Gauss's law and its applications, electric potential and potential function, electric dipole, dielectrics in Gauss' law.
2. **Magnetic Field:** The definition of magnetic field **B**, magnetic force on charge and current, Ampere's law, Biot-Savart law and their application, Lorentz force.
3. **Electromagnetic Induction:** Faraday's law of electro-magnetic induction, Lenz's law, self and mutual induction, energy density in the magnetic field.

Final Exam: 50 Marks**Part – A: 20-Marks**

1. **Current and Resistance:** Current and current density, Ohm's law, potential difference, RC circuits, generation of alternating current and e.m.f.
2. **Structure of Matter:** Crystalline and non-crystalline solid, single crystal and polycrystalline solids, unit cell, bonds in solids, Inter atomic distances, calculation of cohesive and bonding energy.

Part – B: 30-Marks

3. **Relativity:** Postulates of special theory of relativity, Lorentz transformation, time dilation and length contraction, relativity of mass, energy-mass relation, energy- momentum relation.
4. **Modern Physics:** Bohr's atomic model, radius and energy of Hydrogen atom, atomic nucleus and binding energy, photo-electric effect, Compton effect, De-Broglie waves, X-ray diffraction, atomic spectra and Zeeman effect.
5. **Radioactivity:** Definition, radioactive decay laws, half-life, mean life, alpha decay, beta decay, gamma decay, cross section, nuclear fission & fusion.

Course Code: PHY-1202
Course Title: PHYSICS-II Sessional
 Credit Hours: 1 / Contact Hours: 3 per Week

Course Outcome:

ILOs / COs	Description
ILO / CO: 1	Apply the fundamental laws of Mechanics, Electricity & Magnetism in practical engineering.
ILO / CO: 4	Design and conduct experiments, as well as to analyze and interpret data.

Course Contents:

1. Determination of the end corrections for a meter bridge
2. Determination of specific resistance of the material of a wire by a meter bridge
3. Determination of the resistance of a wire by means of post office box
4. Experimental verification of the laws of series and parallel connections of resistance by means of a post office box
5. Calibration of a meter bridge wire
6. Determination of the value of low resistance by the method of fall of potential (Mathiesen and Hockins Method)
7. Determination of the resistance of a galvanometer by half deflection method
8. Determination of the current sensitivity (figure of merit) of a galvanometer
9. To determine the moment of inertia of a flywheel about its axis of rotation
10. To determine the value of 'g', acceleration due to gravity by means of a compound pendulum
11. To determine the Young's Modulus by the flexure of a beam (Bending Method)

Book Recommended:

1. Dr. Giasuddin Ahmad and Md. Shahabuddin : Practical Physics

Course Code: CHEM-2301

Course Title: CHEMISTRY

Credit Hours: 3 / Contact Hours: 3 per Week

Course Objectives:

- To classify elements/matter by its state and bonding behavior using the Periodic Table as reference.
- To make predictions about the atomic structure and chemical properties of the elements based on their position in the periodic table.
- To identify the patterns in bonding, molecular geometry, and chemical reactions.
- To understand the principles of kinetics and thermodynamics and equilibrium positions of chemical reactions.
- To explain the physical properties of solids, liquids, gases, and solutions.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	To understand the chemical behavior and physical properties of elements (under-PO1).
ILO / CO: 2	To develop the knowledge on chemical reaction and solution, metallic and nonmetallic substance and its environmental aspect and impacts (under-PO7).
ILO / CO: 3	To understand the chemical reaction and bonding and its influence in day to day life (under-PO12).

Course Contents:

Mid-term Exam: 30 Marks

1. **Periodic Classification of Elements:** Modern periodic table, Periodic law, Periodic system, Correlation of atomic structure with periodic properties of elements, Ionization potential, Electron affinity, Electronegativity, Atomic and ionic radii, Properties of oxides.
2. **Electronic Theory of Elements:** Different types of bonds, ionic, covalent, co-ordinate and hybridization of atomic orbitals, bonding in simple molecules, Elementary idea about MOT.
3. **Chemistry of Transition Elements, Lanthanides and Actinides:** Definitions, Electronic configurations, general properties.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **Electrochemistry:** Electrolytic dissociation, Theory of electrolytic conductance. Ionic mobility and transference number, Simple ideas about electrode potential and reversible cells.
5. **Types and properties of solutions:** Units of concentration, ideal and real solutions, Henry's Law, Distribution of solids between two immiscible liquids, Distribution law, Partition coefficient and solvent extraction, Properties of dilute solutions.

Part – B: 30-Marks

6. **Chemical Equilibrium: Law** of mass action, Determination of equilibrium constant, heterogeneous and homogeneous equilibrium, Le Chatelier principle and Van Hoff equation.
7. **Chemical Kinetics:** Order and molecularity kinetics of first and second order reaction, Determination of order of reactions, Arrhenius equation and energy of activation.
8. **Surface Chemistry and Colloids:** Adsorption, Langmuir and Gibbs adsorption isotherm, Colloids, Definitions of terms, Electrodialysis, Classification, Preparation and properties of colloids, Elementary idea about emulsions and gels. Importance of colloids.

Text Books:

|------------------------------|--|
| 1. R. D. Madan | : Modern Inorganic Chemistry |
| 2. M.M. Haque and M.A. Nawab | : Principles of Physical Chemistry |
| 3. E.S Gilreath | : Fundamental Concepts in Inorganic Chemistry. |

Course Code: CHEM-2302
Course Title: CHEMISTRY SESSIONAL
 Credit Hours: 1 / Contact Hours: 2 per Week

Course Objectives:

1. Describe processes and procedures used in the scientific method.
2. Differentiate terms such as observation, hypothesis, data, conclusion, theory, precision and accuracy.
3. Balance simple chemical reactions.
4. Perform basic stoichiometric calculations to determine the quantity of products given various quantities of reactants.
5. Use quantitative measures of solution in different units of concentration.
6. Apply quantitative reasoning skills to determine quantities of matter and energy involved in physical and chemical changes.
7. Explain the physical properties of solids, liquids, gases, and solutions.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	To develop the knowledge on determination and standardization of different chemical solution (under-PO1).
ILO / CO: 2	To conduct the experiment and analyze data properly (under-PO4).

List of experiment names:

1. **Experiment No: 1** Introduction to chemistry laboratory use of equipment's: Molarity, Normality, Primary, Secondary standard solutions, Volumetric titrations, Quantitative analysis, Quantitative analysis errors etc.
2. **Experiment No: 2** Acidimetri-Alkalimetri: Determination of the strength and amount of hydrochloric acid.
3. **Experiment No: 3** Preparation of sodium oxalate solution and standardization of potassium permanganate solution.
4. **Experiment No: 4** Determination of Ferrous ion (Fe^{2+}) with standard potassium permanganate solution.
5. **Experiment No: 5** Preparation of standard potassium dichromate solution and standardization of sodium thiosulphate solution.
6. **Experiment No: 6** Determination of copper by iodometric ally with standard sodium thiosulphate solution.
7. **Experiment No: 7** Determination of calcium in calcium carbonate.
8. **Experiment No: 8** Conductometric titration of strong acid with strong base.
9. **Experiment No: 9** Conductometric titration of weak acid with strong base.
10. **Experiment No: 10** Determination of P^{H} of a solution: P^{H} metric titration of a strong acid with strong base.

Text Books:

1. J Mendham – RC Denney : Textbook of Quantitative and Chemical Analysis
2. S.K Hazari : Principles Qualitative and Quantitative Chemical Analysis

Course Code: STAT-2401**Course Title: STATISTICS**

Credit Hours: 2 / Contact Hours: 2 per Week

Course Objectives:

This course is to provide an understanding for the engineering student on statistical concepts to include measurements of location and dispersion, probability, probability distributions, hypothesis testing, regression, and correlation analysis.

Course outcomes:

ILOs / COs	Description
ILO / CO: 1	Demonstrate understanding of descriptive statistics by practical application of quantitative reasoning and to the solution of engineering problems with data visualization.
ILO / CO: 2	Be able to compute and interpret the results of correlation and regression.

Course Contents:**Mid-term Exam: 30 Marks**

- Preliminary idea of Statistics:** Origin, History and Development Statistics, Definition of Statistics, Characteristics, Function, Limitations, Necessity & importance of Statistics, The role of Statistics in Engineering, Population and Sample, Variable and Constants, Different types of variables, Parameter, Statistic, Scale of measurement, Statistical data, collecting engineering data, Preparation of Questionnaire and Schedule, Presentation and Classification of Data, Construction of Frequency distribution, Graphical presentation of Frequency distribution.
- Measures of Central Tendency:** Different types of mean with their properties and relationship, Quintiles with their graphical presentation, Application of different measures of central tendency.
- Measures of Dispersion of a Series of Data:** Range, Standard Deviation, Mean Deviation, Quartile Deviation, Variance and Standard Deviation, Coefficient of Variation and their uses, Properties and applications of different measures of dispersion, moments, skewness and kurtosis.

Final Exam: 50 Marks**Part – A: 20-Marks**

- Correlation Theory and Regression Analysis:** Simple Correlation and its measure, Scatter Diagram, properties of simple correlation coefficient, Spearman's Rank correlation coefficient, Simple linear regression, properties of regression coefficient, regression curve, regression equation, Least-square method of curve fittings, Co-efficient of determination, Theorems & Problems.
- Basic concepts of probability:** History, meaning and Scope of probability, Approaches of defining probability: Classical, Empirical, Subjective and Axiomatic probability, Experiment, random experiment, Sample Space, Event, different types of events, Tree diagram, Conditional probability and independence, some elementary theorems on probability, and conditional probability, Laws of Probability – Additive and Multiplicative Law, Prior probability, Posterior probability, total probabilities & Bayes' theorem and their applications

Part – B: 30-Marks

- Random Variables and Mathematical Expectation:** Discrete and continuous random variables, Probability mass function and density function, Distribution function and their properties, Mathematical expectation and variance of a random variables. Theorems & Problems.
- Probability Distributions:** Binomial distribution, Poisson distribution and Normal distribution – Their properties, uses, Theorems & Problems.
- Test of hypothesis and Estimation:** Preliminary ideas of statistical hypothesis test, level of significance, one tailed and two tailed test, p-value, Test of significance, Test regarding single mean, test of equality of two mean, test of equality of several means (Analysis of variance), test regarding proportion. General concepts of Estimation.

Recommended Books:

- Douglas C. Montgomery : Applied Statistics and Probability for Engineers
- Walpole and Myers : Probability & Statistics for Engineers & Scientists

3. M.K. Roy and J.C Paul : Business Statistics
4. R.N. Shill & S.C. Debnath : An introduction to the theory of Statistics
5. M.G. Mostafa : Methods of Statistics
6. M.K. Roy : Fundamentals of Probability and Prob. Distribution
7. Alberto Leon-Garcia : Probability, Statistics, and Random Processes for Electrical Engineering

Course Code : CCE - 1105
Course Title: COMPUTER FUNDAMENTALS AND PROGRAMMING

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

This course introduces/analyze students to: i) recognize and understand the purpose of basic computer components, ii) understand the concept of program, iii) understand the concept of variable, constant, loop, array, function, structure, pointer and file, iv) understand the parts of a computer system and how they interact, v) understand the concept of a program in a high-level language being translated by a compiler into machine language program and then executed.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Define the components of a computer system including the basic terminology used in computer programming.
ILO / CO: 2	Demonstrate C language by writing, compiling and debugging programs with the use of different data types, variables, constants and numerous input/output functions.
ILO / CO: 3	Apply control statements, functions, structures, unions, arrays and pointers of C language to solve real world problems.
ILO / CO: 4	Adapt the concept of file handling to manipulate file data.

Course Contents:

Mid-term Exam: 30 Marks

1. Computer Organization:

Basic organization and functional units of computer, Input/storage/output/arithmetic logic/control and central processing unit, internal structure of CPU. Memory location and address, RAM, ROM, Basics of software

2. Introduction to Programming:

Definition of Software, its classification, Problem solving steps, Introduction of C and its structure, history and Characteristics, Introduction to keywords, constants and identifiers, Fundamental of C variable and data types, Rules of constants, Introduction to arithmetic, relational and logical operators, Introduction to expressions, Managing data input, Managing data output.

3. Program Control Statements:

Decision making and branching. If and if... else statements, Other control statements, switch and the '?:' operator, Decision making and looping. While looping, Do...while and for looping statements, Jump statement go to, break and continue.

Final Exam: 50 Marks

Part – A: 20-Marks

4. User-defined Functions:

Need for multifunction programs, return values, types and some examples, Calling functions and arguments, Recursions, passing arrays to functions, Storage class.

5. Arrays:

Introduction to arrays. One-dimensional array. Some sample programs, Two-dimensional array. Some sample programs, String handling in C and some examples.

Part – B: 30-Marks

6. Structures and Unions:

Definition of Structure, Union, Structure union applications, Self-referential Structure, Linked list, Array of structure and some examples.

7. Pointers:

Understanding pointers, Pointers and arrays. Pointers and functions, pointers and structures.

8. File Management:

File management concept in C, Defining, opening and closing a file, Input/output operations in file, Error handling and command line arguments, Dynamic memory allocation, Some special features of C (Macros, Enumerations).

Course Code : CCE - 1106**Course Title: COMPUTER FUNDAMENTALS AND PROGRAMMING SESSIONAL**

Credit Hour: 1.5/ Contact Hour: 3 per week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Write, compile and execute C programs based on simple constructs like arrays, loops, structures, conditional statements etc.
ILO / CO: 2	Apply the concepts of pointer and functions to solve problems
ILO / CO: 3	Demonstrate the use of file handling operations.
ILO / CO: 4	Develop simple C program for standard applications.

Course Contents:

- [1]. Introduction to C programming
- [2]. Data types and expressions
- [3]. Operators
- [4]. Decision making and Branching (if-else, nested if-else)
- [5]. Decision making and Branching (if-else, if-else-if ladder and switch)
- [6]. Decision making and Looping (do-while, while and for)
- [7]. String manipulation
- [8]. User define function
- [9]. Call-by-value and call-by-reference
- [10]. Recursion
- [11]. Arrays-one dimensional
- [12]. Arrays-two dimensional
- [13]. Structure and Union
- [14]. Pointers
- [15]. File management

- [2]. Byron S. Gottfried, "*Theory and Problems of Programming with C*" 3rd ed., McGraw-Hill Company Inc, 1996

Course Code: CCE-1103
Course Title: BASIC ELECTRICAL ENGINEERING

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

- 1) To introduce the fundamental ideas of DC electrical circuits
- 2) To comprehend and apply ohm's law
- 3) To get the basic ideas about series and parallel circuits
- 4) To learn to find equivalent resistance of complex circuits
- 5) To Comprehend and Apply various types of circuit theorems
- 6) To introduce the fundamental ideas of magnetic circuit
- 7) To analyze the performance of R-C and R-L circuits with DC excitation

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand the concepts of basic Circuit element, basic circuit, and basic circuit Laws and magnetic circuit laws.
ILO / CO: 2	Introduce series parallel circuit and different network theorem to analysis the circuits.

Course Contents:

Mid-term Exam: 30 Marks

1. **Circuit variables and elements:** Voltage, current, power, energy, independent and dependent sources, and resistance.
2. **Basic laws:** Ohm's law, Kirchoff's current and voltage laws. Simple resistive circuits: Series and parallel circuits, voltage and current division.
3. **Wye-delta transformation:** Necessity of Delta-Wye Conversion, Application, Delta to Wye Conversion, Wye to Delta Conversion.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Techniques of circuit analysis:** branch current analysis, Nodal and mesh analysis including super node and super mesh.
2. **Network theorems:** Source transformation, Thevenin's, Norton's and superposition theorems with applications in circuits having independent and dependent sources, maximum power transfer condition and reciprocity theorem.

Part – B: 30-Marks

1. **Energy storage elements:** Inductors and capacitors, series parallel combination of inductors and capacitors, Source free RC circuit, Source free RL circuit, Step response of RC circuit, Step response of RL circuit.
2. **Magnetic Circuits:** Magnetic quantities and variables: Flux, permeability and reluctance, magnetic field strength, magnetic potential, flux density, magnetization curve. Laws in magnetic circuits: Ohm's law and Ampere's circuital law. Magnetic circuits: series, parallel and series-parallel circuits.
3. **Second Order Circuit:** Source free series RLC circuit, Source free parallel RLC circuit, Step response of series RLC circuit, Step response of parallel RLC circuit.

Text Books:

1. Robert L. Boylestad, "Introductory Circuit Analysis", 11th ed. Pearson education international, USA, 2007
2. Charles K. Alexander and Matthew N. O. Sadiku, "Fundamental of Electric Circuits", McGraw Hill, New York, 2009

Reference Books:

1. L. Theraja and A. K. Theraja, "A text book of Electrical Technology", Volume IV, 23th ed. RajendraRavindra Printers, India, 2007

Course Code: CCE-1104
Course Title: BASIC ELECTRICAL ENGINEERING SESSIONAL
 Credit Hour: 1/ Contact Hour: 2 per week

Course Objective:

1. To introduce the typical lab equipment's used in the laboratory
2. To give general guideline about the safety precautions necessary
3. To verify different circuit laws and theorems

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Introduce basic required component of electrical circuit.
ILO / CO: 2	Examine the different laws of basic circuit and theorem.
ILO / CO: 3	Analyze the different laws of basic circuit and theorems using modern tools.
ILO / CO: 4	Able to do the lab works individually and as members or leader of a team.

Contents:

S.L.	Contents
1.	Familiarization with the Electrical circuit instruments and components.
2.	Study of Ohm's law.
3.	Verification of KVL & Voltage Divider Rule.
4.	Verification of KCL & Current Divider Rule.
5.	Introduction to modern tools (PSpice) to analyze the circuit.
6.	Equivalent Resistance of Series-Parallel Network.
7.	Analysis of Delta-Wye Network.
8.	Analysis of Nodal circuit.
9.	Verification of Superposition Theorem.
10.	Verification of Thevenin's Theorem.
11.	Verification of Maximum Power Transfer Theorem.

Course Contents:

Laboratory works based on **CCE – 1103**

Course Code: CCE-1102
Course Title: ENGINEERING DRAWING SESSIONAL

Credit Hours: 1 / Contact Hours: 2 per Week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand the importance of ISO Standards in Engineering Drawing, lettering and Dimensioning.
ILO / CO: 2	Perform basic sketching techniques (2D & 3D) will improve through exercises in Orthographic Projection, isometric, sectional, and perspective drawing.
ILO / CO: 3	Use extract information from drawings and geometric models to solve Engineering Drawing problems.
ILO / CO: 4	Use the knowledge of sketching and technical drawing in the various fields of engineering.

Course Contents:

S.L.	Contents
1.	Introduction orthographic projection: Scale drawing, Sectional view, Top and side view Isometric views, Missing line, Auxiliary view, Pictorial views.
2.	Drawing standard and practices: Interpenetrating of surface, Development of surfaces, Machine drawings, and Technical sketching.
3.	Introduction to Computer Aided Design (CAD): Project on Engineering Drawing and CAD using Contemporary packages in engineering drawing
4.	Introduction and Familiarization of Drawing Instrument.
5.	Line, Dimensioning, Scale of drawing and Plane Geometry.
6.	Orthographic views (Free hand Drawing)
7.	Orthographic views (With Dimension)
8.	Missing line, Auxiliary view, Pictorial view and sectional view
9.	Isometric views
10.	Development of surfaces
11.	Machine drawings and technical sketching
12.	Study on CAD Drawing
13.	Project on engineering drawing and CAD using contemporary packages in 2D

Books Recommended:

1. Engineering Graphics 3rd Edition: Fredw Rick E Giesecke, Alva Mitchell, Henry C. Spencer, Ivan L. Hill, Robert O.

Course Code: CCE – 1207
Course Title: OBJECT ORIENTED PROGRAMMING WITH JAVA

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

1. To understand Object Oriented Programming concepts
2. To understand the role that methods play in an object-oriented program 2 To understand the concept of a class hierarchy.
3. To know the basic characteristics of Java
4. To become familiar with the relationship between classes and objects in a Java program
5. To comprehend Java Data and Control Structures
6. To understand the difference between a Java application and a Java applet.
7. To understand the role that data plays in effective program design
8. To be able to solve problems involving repetition
9. To understand the goals and principles of structured programming
10. To write efficient and effective applications in Java

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Define the concept of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
ILO / CO: 2	Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
ILO / CO: 3	Develop Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, multithreading, error exception handling)

Course Contents:

Mid-term Exam: 30 Marks

1. **Concepts of Object-Oriented Programming:** Java Features and advantages, Class, Object, Abstraction, Encapsulation, Inheritance, Polymorphism, JVM, Creating classes with Java, Nested Class, Java application and Applet
2. **Variables, Operators, and Control Statement:** Variables, Data Types, Arrays, Operators and Control Flow, string vector
3. **Classes and Objects:** Classes, Objects, Instance variables, Using methods, Constructors, *this*, *final*, *static* keywords, Calling a class method, Passing parameters, Nested class.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Inheritance and Polymorphism:** Implementation of Inheritance, Inheritance basics, Using Super, Constructor, Method overriding, Dynamic method dispatch, Abstract classes, Method overloading, Polymorphism examples,
2. **Exception Handling:** Overview of exception handling, the basic model, Hierarchy of Event classes, throw clause, throws statement, try-catch block, finally, User-defined exception subclasses, Chained exceptions, Use of exceptions.

Part – B: 30-Marks

1. **Multithreaded Programming:** Java thread model, Main thread, Crating single and multiple thread, Thread priorities, Synchronization, Interthread Communication, Suspending, Resuming, and Stopping threads, Using multithreading.
2. **Using Standard Java Packages:** Packages, Interfaces, Event handling of various components, AWT components
3. **Files and Streams:** Data Hierarchy, Files and streams, Class *File*, Sequential-access text files, Object Serialization, Random-access files, Vectors, Byte streams, Buffer Streams, Character streams.

Course Title: OBJECT ORIENTED PROGRAMMING WITH JAVA SESSIONAL

Credit Hour: 1/ Contact Hour: 2 per week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Apply knowledge of the concept of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
ILO / CO: 2	Identify classes, objects, members of a class and the relationships among them needed for a specific problem.

Course Contents:

S.L.	Contents
1.	Introduction with basic structure of JAVA programming
2.	Introducing Class and Object using basic program
3.	Implementation of simple method for arithmetic sum of two numbers using JAVA
4.	Calculate the area of rectangle using Scanner and a simple method
5.	Experiment on basic understanding of Constructor in JAVA
6.	Basic understanding of single Inheritance using JAVA
7.	Finding the volume of the Queue using Multi-level Inheritance in JAVA
8.	Implementation of Runtime Polymorphism as Method Overriding
9.	Implementation of Compile time Polymorphism as Method Overriding
10.	Implementation of Try and Catch for Exception handling using Single Catch
11.	Implementation of Exception handling using Multiple Catch statement

Course Notes:

Lab Manual Prepared by course instructor.

Course Title: Basic Electronics

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

1. To introduce students' structures, physical operations, and circuit applications of basic semiconductor devices.
2. To provide students a base for a further study of analog and digital electronics.
3. To develop the ability to analyze and design electronic circuits.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Apply knowledge of Basic Electronics to Distinguish schematic symbol and Recognize basic concepts of electronic components and circuits.
ILO / CO: 2	To analyze the functionality of various devices including several types of Diode, BJT and FET through problem analysis.

Course Contents:

Mid-term Exam: 30 Marks

1. **Semiconductors materials:** Classification of material in terms of energy band, Extrinsic material and Intrinsic material, Electrons and holes in an intrinsic semiconductor, Donor and acceptor impurities, mobility, Hall effect, structure of N-type and P-type materials and their conductivity.
Density of States and Fermi Dirac function. Calculation of Carrier Concentration, Drift of carriers, Mobility, Carrier Diffusion, Einstein Relation, Generation and Recombination, Excess carriers, Quasi-Fermi level, Basic Semiconductors Equations.
2. **P-N junctions Diode:** Formation of P-N junction, Depletion layer formation, PIV of Diode, Diode V-I characteristics, Small signal model of diode, transition and diffusion capacitance.
3. **Applications of diodes:** Circuit applications of diode, Rectifiers, Filter circuit, voltage doubler, Voltage tripler, Clamper and Clipper. Zener diode, LED, Photodiode, varactor diode, photo resistor, Crystal diode and Solar Cell.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Bipolar Junction Transistors:** Working principle of N-P-N and P-N-P transistor, V-I Characteristics of transistor, Different configuration of transistors amplifiers, input and output Characteristics, Cutt off and Saturation region, Load line analysis.
2. **Transistor biasing:** Various biasing method, Conditions of proper transistor biasing, Stability factor, Thermal stabilization.

Part – B: 30-Marks

1. **Small Signal model of Bipolar transistor:** Small signal low frequency h-parameters, Determinations of Hybrid parameters in CE, CC and CB configurations.
2. **Field Effect Transistor:** introduction, JFET, MOSFET, PMOS, NMOS, CMOS and their switching characteristics.
3. **Small Signal model of FET:** Small signal model for JFET, MOSFET and biasing of JFET and MOSFET.

Text Books:

1. Electronic Device and Circuit Theory 11th Edition, Robert L. Boylestad.

Reference:

1. David A. Bell: Electronics Devices and Circuits, *Fourth Edition*.
2. V.K Mehta: Principles of Electronics, *tenth edition*.

Course Code: CCE – 1204
Course Title: BASIC ELECTRONICS SESSIONAL

Credit Hour: 1 / Contact Hour: 2 per week

Course Objectives:

1. To introduce students' structures, physical operations, and circuit applications of basic semiconductor devices.
2. To develop the ability to understand, analyze and to do problem analysis of electronic circuits.
3. To investigate the functionality of Electronics Devices through experimentation.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Apply knowledge of Basic Electronics to Distinguish schematic symbol and Recognize basic concepts of electronic components and circuits.
ILO / CO: 2	To investigate the functionality of Electronics devices including several types of Diode, BJT and FET.

Course Contents:

Contents
1. Diode and It's application
2. Semiconductor Diode Characteristics.
3. Applications of Diode-1 (Logic Gates)
4. Applications of Diode-2 (Rectifiers and Filter)
5. Applications of Diode-2 (Doubler/Clipper/Clamper)
6. Zener Diode and It's application
7. Zener Diode Characteristics.
8. Application of Zener Diode (Voltage Regulation Properties)
9. Transistor and It's application
10. Demonstrate and measure input-output characteristics of a NPN transistor under Common Emitter/Common Collector /Common Base configuration.

Course Code: CCE – 1206
Course Title: WEB PROGRAMMING SESSIONAL

Credit Hour: 1.5 / Contact Hour: 3 per week

Course Objectives:

- To understand the concept of Web Application Development and its Architecture.
- To understand the Essentials of Web Application Development.
- To understand and practice web page designing techniques.
- To understand and practice embedded dynamic scripting on client side Internet Programming.
- To understand the differences between client side & server side technologies to develop Web Application.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand functionality of Web programming and its applications
ILO / CO: 2	Design and develop interactive, client-side, server-side executable web applications

Course Contents:

Contents
1. HTML: Basic, Elements, Attributes, Headings, Paragraphs, Formatting, Links, Head, Images, Tables, Lists, Blocks, Layout, Forms, Colors, Colornames, CSS, JavaScript, Entities, URL Encode, Quick List
2. CSS: Introduction, Syntax, Id & Class, <u>Styling Backgrounds</u> , Text, Fonts, Links, Lists, Tables, Box Model, Border, Outline, Margin, Padding, Grouping/Nesting, Dimension, Display, Positioning, Floating, Align, Navigation Bar, Image Gallery
3. JavaScript: Introduction, Output, Statements, Comments, Variables, Data Types, Objects, Functions, Operators, Comparisons, Conditions, Loop, Errors, <u>DOM Introduction</u> , Number, <u>String</u> , <u>Date</u> , <u>Array</u> , <u>Window</u> , <u>Screen</u> , <u>Location</u> , <u>History</u> , <u>Navigator</u> , <u>Popup Alert</u>
4. PHP part 1: <u>Syntax</u> , <u>Variables</u> , <u>String</u> , <u>Operators</u> , <u>If...Else</u> , <u>Switch</u> , <u>Arrays</u> , <u>While Loops</u> , <u>For Loops</u> , <u>Functions</u> , <u>Forms</u> , <u>\$ GET</u> , <u>\$ POST</u>
5. PHP part 2: <u>Date</u> , <u>Include</u> , <u>File Upload</u> , <u>Cookies</u> , <u>Sessions</u> , <u>E-mail</u> , <u>Error</u> , <u>Exception</u> , PHP Database, PHP ODBC
6. MySQL part 1: Select, Distinct, Where, And & Or, Order By, Insert, Update, Delete, Like, In, Between, Alias, Joins, Union, Create DB, Create Table, Primary Key,
7. MySQL part 2: Foreign Key, Drop, Alter, Increment, Views, Dates, Functions- avg(), count(), max(), Group By, Having, format()

Course Code: CCE –2301
Course Title: DATA STRUCTURES AND ALGORITHMS

Credit Hour: 3/ Contact Hour: 3 per week

Course Objective:

This course introduces/analyze students i) To assess how the choice of data structures and algorithm design methods impacts the performance of programs. ii) To choose the appropriate data structure and algorithm design method for a specified application. iii) To study the systematic way of solving problems, various methods of organizing large amounts of data. iv) To solve problems using data structures such as linear lists, stacks, queues, hash tables, binary trees, heaps tournament trees, binary search trees, and graphs and writing programs for these solutions. v) To employ the different data structures to find the solutions for specific problems.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Identify various terminologies of data structures and algorithms
ILO / CO: 2	Implement various data structures such as arrays, records, pointers, stacks, queues, recursions, linked lists, trees and graphs
ILO / CO: 3	Analyze and Compare various searching and sorting techniques

Course Contents:

Mid-term Exam: 30 Marks

- Introduction:** Data types & data structures, data structure operations, Introduction to algorithms, performance analysis.
- Arrays, Records and Pointer:** Linear arrays, Relationships of arrays, Operation on arrays, Multidimensional arrays, pointer arrays, Record structures, representation of records, Sparse matrices.
- Stacks, Queues and Recursion:** Fundamentals, Different types of stacks and queues: circular, dequeues, etc., Evaluation of expressions, recursion, direct and indirect recursion, depth of recursion, Implementation of recursive procedures by stacks.

Final Exam: 50 Marks

Part – A: 20-Marks

- Linked List:** Linked lists, Representation of linked list, Traversing & searching a linked list, Doubly linked list & dynamic storage management, Generalized list, Garbage collection & compaction.
- Trees and Graphs:** Basic terminology, Binary trees, Binary tree representation, Tree traversal, Extended binary tree, Huffman codes/algorithm, Graphs, Graph representation, Shortest path and transitive closure, Traversing a graph.

Part – B: 30-Marks

- Sorting & Searching:** Sorting, Insertion sort, Shell sort, Heap sort, Radix sort, The general method of divide & conquer method, Merge sort, Quick sort, Selection sort, binary search.
- Symbol Tables:** Static tree tables, Dynamic tree tables, Hash tables overflow handling, Theoretical evaluation of overflow techniques.
- Dynamic programming:** The general method, multistage graphs, all pairs shortest paths, single source shortest paths problems.

Books Recommended:

- E. Horowitz and S. Sahni: Fundamentals of Data Structures
- E. Horowitz and S. Sahni: Computer Algorithm
- S Lipschutz: Theory and Problems of Data Structures
- Reingold: Data structures
- T. H. Cormen, C. E. Leiserson: Introduction to Algorithms

Course Code: CCE –2302
Course Title: DATA STRUCTURES AND ALGORITHMS SESSIONAL

Credit Hour: 1/ Contact Hour: 2 per week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Implement various data structures such as arrays, records, pointers, stacks, queues, recursions, linked lists, trees and graphs
ILO / CO: 2	Analyze and Compare various searching and sorting techniques

Course Contents:

S.L.	Contents
1.	Introduction to the course, Basic Guidelines and advises for the course, Discussion about specifications of the course
2.	Array
3.	Stacks
4.	Queues
5.	Recursions
6.	Searching
7.	Sorting
8.	Trees
9.	Graphs

Course Code: CCE – 2303
Course Title: MICRO ELETRONICS

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

Analog Electronics is the 2nd fundamental course for the students who have keen desire to develop their career in Electronics arena from ETE Students. The primary objective of the course is to gain the basic concept of electronics components and circuit. Also, the students will have ability to analyze the functionality through problem analysis and enrich ability to construct the electronics circuit in next courses according to the program requirement.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	To acquire knowledge of Basic Electronics to recognize basic concepts of electronic components and circuits.
ILO / CO: 2	To analyze the functionality of various devices including several types of Operational amplifier, Regulator, amplifiers and etc.

Course Contents

Mid-term Exam: 30 Marks

- Feedback Amplifiers:** Feedback concept, Types of Feedback, effect of feedback on transfer gain input and output impedance, distortion, noise and stability, Practical Feedback Circuits, Feedback Amplifier- Phase and Frequency Considerations, Loop gain,
- Sinusoidal Oscillators:** Barkhausen criterion for oscillations, phase shift oscillator, Wien's bridge oscillator, tuned oscillator circuit, crystal oscillator, Colpitts and Hartley Oscillators, series-resonant circuits, parallel-resonant circuits.
- Multi-vibration Circuits:** Concept of multi-vibrator: astable, monostable, and bistable and their applications, block diagram of IC 555 and its working principle, IC 555 as monostable and astable multi-vibrator.

Final Exam: 50 Marks

Part – A: 20-Marks

- Pulse Shaping Circuit and Multistage amplifiers:** High pass and low pass RC circuits (sinusoidal, step voltage, pulse square wave exponential and ramp inputs), The R-C coupled amplifiers, Low and High frequency response of R-C coupled amplifiers.
- Power Amplifier:** Introduction—Definitions and Amplifier Types, Series-Fed Class A Amplifier, Transformer-Coupled Class A Amplifier, Class B Amplifier Operation, Class B Amplifier Circuits, Amplifier Distortion, Power Transistor Heat Sinking, Class C and Class D Amplifiers

Part – B: 30-Marks

- Regulated power supply:** Zener diode as a voltage regulator, Shunt and Series voltage regulator and Emitter follower regulator, Step Up and Stepdown switching mode power supply
- Operational Amplifiers:** Ideal OP-AMP, Bias voltage, Offset voltage, Slew rate, Inverting and Non inverting amplifiers, Phase inverters, Scale changer, Integrating and Differentiating circuits, Adder or Summing amplifiers, Voltage to Current, Current to Voltage converters, Voltage follower.
- Applications of Op-Amp:** Zero crossing detectors and voltage level detectors, Differential Instrumentation and Bridge amplifiers, Active filters. Instrumentation amplifier, Comparators, the window comparator, waveform conversion & generation.

Text Books:

Course Code: CCE – 2304
Course Title: MICRO ELECTRONICS SESSIONAL
 Credit Hour: 1/ Contact Hour: 2 per week

Course Objectives:

1. Design and construct simple electronic circuits to accomplish a specific function, e.g., designing amplifiers, ADC converters etc.
2. Understand their capabilities and limitations and make decisions regarding their best utilization in a specific situation.
3. Understand the nature and scope of modern electronics
4. To develop the ability to analyze and design electronic circuits.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Apply knowledge to analyze the functionality of various devices including several types of Operational amplifier, Regulator, multivibrator and etc.
ILO / CO: 2	To construct and investigate basic electronic circuit.

Course Contents:

S.L.	Contents
1.	Operational Amplifier and its application
2.	Operational Amplifier - Inverting Amplifier
3.	Operational Amplifier – Noninverting Amplifier
4.	Operational Amplifier as a comparator
5.	Operational Amplifier as a differentiator
6.	Operational Amplifier as an integrator
7.	Operational Amplifier as a summing amplifier
8.	Oscillator and its application
9.	RC phase shift Oscillator
10.	Multi-vibrator and its application
11.	Astable Multi-vibrator
12.	Monstable Multi-vibrator
13.	Schimit Trigger

Course Code: CCE – 2305
Course Title: SIGNALS AND LINEAR SYSTEMS

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

The objective of this course is to introduce the concepts and techniques associated with the understanding of signals and systems and to familiarize with techniques suitable for analyzing and synthesizing both continuous-time and discrete time systems which provides foundation for more advanced subjects like signal processing, system theory, control and robotics.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Classify signals and systems based on their properties and determine the mathematical representations of signals and systems.
ILO / CO: 2	Analysis of signals transformation and predict the behavior of Linear time invariant (LTI) systems.

Course Contents:

Mid-term Exam: 30 Marks

- 1. Introduction with signals:** Definition of signal, mathematical & graphical representation of signal, classification of signals: continuous & discrete time, even & odd, periodic & non-periodic, deterministic & random, causal & non-causal, power & energy.
- 2. Basic Operation on signal:** Amplitude scaling, addition, multiplication, differentiation, integration, time scaling, reflection, time shifting, combination of shifting and scaling.
- 3. Elementary signals:** Exponential signal, sinusoidal signal, complex exponential signal, step function, Impulse function, ramp function, representation of arbitrary signal by elementary signals. Introduction with systems: Definition of system, system viewed as interconnection of operations, properties of the system: stability, memory, causality, invertibility, time invariance, linearity.
- 4. Convolution theorem:** Convolution sum, convolution integral.

Final Exam: 50 Marks

Part – A: 20-Marks

- 1. Interconnection of LTI systems:** parallel connection & cascade connection, relation between LTI systems, LTI systems properties and impulse response, invertible systems, step response of the system.
- 2. Differential and Difference equation representations of LTI systems:** Homogeneous solution, particular solution, complete solution, characteristics of systems described by differential and difference equations: natural and forced response of the system, block diagram representation of the systems
- 3. Frequency response of LTI systems, Fourier series and Fourier transformation of continuous time signals.**

Part – B: 30-Marks

- 1. Discrete time Fourier series and DTFT of discrete time signals.**
- 2. Inverse Fourier series and inverse Fourier transformation of continuous and discrete time signals.**
- 3. Properties of Fourier representations:** Linearity and symmetry properties, convolution properties, differentiation and integral properties in time and frequency domain, time and frequency shifting properties, inverse Fourier transformation using partial fraction expansion, multiplication property, scaling property, duality.
- 4. Laplace transformation:** Laplace transforms representation, convergence, the s-plane, the unilateral Laplace transformation, properties of unilateral Laplace transformation, initial and final value theorem, inversion of the unilateral Laplace transformation, solving differential equation with initial condition, properties of the bilateral Laplace transformation.

Course Code: CCE – 2307
Course Title: DISCRETE MATHEMATICS
 Credit Hours: 2 Contact Hours: 2 per week

Course Objectives:

1. To obtain general knowledge about the areas of discrete mathematics and algebra
2. To understand a variety of methods used to construct mathematical proofs
3. To acquire an insight into applications such as coding and design

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Identify and apply basic concepts of set theory, arithmetic, logic, proof techniques, binary relations, graphs and trees
ILO / CO: 2	Develop convincing arguments, conceive and/or analyze basic mathematical proofs and discriminate between valid and unreliable arguments.
ILO / CO: 3	Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems
ILO / CO: 4	Communicate both technical and non-technical information in a range of forms (written, oral, electronic, graphic,) and work as an effective team member.

Course Contents:

Section-A (Mid-term: 30 Marks)

1. **Set:** Introduction to Set, Set operation, Representation of Sets, Algebraic Properties of Set, Computer representation of set.
2. **Logic:** Introduction to Logic, Propositional Calculus, propositional equivalences, Predicate and quantifier, Translating sentence into logical expressions.
3. **Function & Relation:** Introduction to function, Some important functions, Properties of function, Rate of Growth: Big O Notation, Sequence and summation. Introduction to Relation, Representation of Relation, Properties of Relation, Composition of Relation, Equivalence Relations, Partition, Closures of Relation.

Section-B (Final Exam: 50 Marks)

Group-A (20 Marks)

4. **Number Theory:** Theorem of Arithmetic, Modular Arithmetic, GCD, LCM, Prime Number, Congruence, Application of Congruence, Application of Number Theory, Chinese Remainder Theory.
5. **Mathematical reasoning:** Methods of Proof, Mathematical Induction, Recursion.

Group-B (30 Marks)

6. **Counting:** Basic Counting principle, Inclusion-Exclusion principle, Application of Sum rule and Product rule, Pigeon hole principle, Permutation and Combination, Binomial coefficients, Recurrence relations.
7. **Graph:** Graph terminology, Representation of graph, Graph Isomorphism, Graph connectivity, Euler and Hamilton paths, Shortest Path Problems, Planner Graphs, Graph coloring.
8. **Tree:** Definition of Trees, Application of trees, Tree Traversal, Trees and sorting, Spanning trees, Minimum spanning trees.

Course Code: CCE-2401
Course Title: NUMERICAL METHODS
 Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

This course is intended as an introduction to techniques for carrying out numerical computation on computers, historically one of the fundamental disciplines of computer science. It may be considered to be a preparatory course for a course in numerical analysis. Numerical methods, based upon sound computational mathematics, are the basic algorithms underpinning computer predictions in modern systems science. Such methods include techniques for simple optimization, interpolation from the known to the unknown, linear algebra underlying systems of equations, ordinary differential equations to simulate systems, and stochastic simulation under random influences.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions.
ILO / CO: 2	Apply numerical methods to obtain approximate solutions to mathematical problems.

Course Contents:

(Mid-term Exam: 30 Marks)

1. Errors in Numerical Calculations:

Significant figure, rounding off numbers, Error in Numerical Calculation

2. Roots of Nonlinear Equation:

Solution of Algebraic and Transcendental Equation

3. Interpolation:

Interpolation with equal and unequal intervals- Missing values, Newton's binomial expansion formula, Newton's forward and backward interpolation formula. Central difference interpolation formulae, inverse interpolation.

(Final Exam: 50 Marks)

Group- A (20-Marks)

1. Numerical Differentiation:

Derivates using Newton's forward backward and Stirlings' formula.

2. Numerical Integration:

General quadrature formula for equidistant ordinates. Trapezoidal rule, Simpson's one-third rule, Simpson's three-eighths rules, Weddle's rule.

Group-B (30 Marks)

5. Numerical solution of ordinary differential equations:

Taylor's series method, Euler's method, Adams Back forth Moulton method, Runge-Kutta method.

6. Solution of linear equations:

Gauss-elimination method, Iteration methods. Gauss-Seidel method, Gauss-Jordan method.

7. Curve Fitting:

Objective of fitting a curve, fitting a straight line, fitting a parabola

Text Books:

Course Code: CCE – 2406
Course Title: PYTHON PROGRAMMING SESSIONAL

Credit Hour: 1.5 / Contact Hour: 3 per week

Course Objectives:

1. Interpret the use of procedural statements like assignments, conditional statements, loops and function calls.
2. Infer the supported data structures like lists, dictionaries and tuples in Python.
3. Illustrate the application of matrices and regular expressions in building the Python programs.
4. Discover the use of external modules in creating excel files and navigating the file systems.
5. Describe the need for Object-oriented programming concepts in Python.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Describe the Python language syntax including control statements, loops and functions to write programs for a wide variety problem in mathematics, science, and games..
ILO / CO: 2	Examine the core data structures like lists, dictionaries, tuples and sets in Python to store, process and sort the data
ILO / CO: 3	Interpret the concepts of Object-oriented programming as used in Python using encapsulation, polymorphism and inheritance
ILO / CO: 4	Discover the capabilities of Python regular expression for data verification and utilize matrices for building performance efficient Python programs
ILO / CO: 5	Identify the external modules for creating and writing data to excel files and inspect the file operations to navigate the file systems

Course Contents:

Contents
1. a) Write a Python program to print all the Disarium numbers between 1 and 100. b) Write a Python program to encrypt the text using Caesar Cipher technique. Display the encrypted text. Prompt the user for input and the shift
2. Devise a Python program to implement the Rock-Paper-Scissor game.
3. Write a Python program to perform Jump Search for a given key and report success or failure. Prompt the user to enter the key and a list of numbers.
4. The celebrity problem is the problem of finding the celebrity among n people. A celebrity is someone who does not know anyone (including themselves) but is known by everyone. Write a Python program to solve the celebrity problem.
5. Write a Python program to construct a linked list. Prompt the user for input. Remove any duplicate numbers from the linked list.
6. Perform the following file operations using Python a) Traverse a path and display all the files and subdirectories in each level till the deepest level for a given path. Also, display the total number of files and subdirectories. b) Read a file content and copy only the contents at odd lines into a new file
7. Create a menu drive Python program with a dictionary for words and their meanings. Write functions to add a new entry (word: meaning), search for a particular word and retrieve meaning, given meaning find words with the same meaning, remove an entry, display all words sorted alphabetically.

8. Using Regular Expressions, develop a Python program to
a) Identify a word with a sequence of one upper case letter followed by lower case letters.
b) Find all the patterns of "1(0+)1" in a given string.
c) Match a word containing 'z' followed by one or more o's. Prompt the user for input.
9. Gg Write a Python program to plot the Line chart in MS Excel Sheet using XlsxWriter module to display the annual net income of the companies mentioned below.
10. Devise a Python program to implement the Hangman Game.

Text Books:

A Lab Manual Prepared by instructor

Reference:

1. Python Crash Course' by Eric Matthews.
2. Head-First Python' by Paul Barry 2nd edition.
3. Learn Python the Hard Way' by Zed A. Shaw (3rd Edition)
4. Python Programming' by John Zelle is the third edition.
5. Learning with Python' by Allen Downey, Jeff Elkner, and Chris Meyers.
6. A Byte of Python' by C.H. Swaroop.
7. Fluent Python' by Luciano Ramalho.

Course Code: CCE – 2407
Course Title: BASIC COMMUNICATION ENGINEERING

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

Analog Communication is a foundational course for those majoring in the communication option in second year. This course introduces/analyze students to: (i) the essential approaches, fundamental concepts and design issues in communication engineering. The course emphasizes the understanding of engineering principles. Mathematics is used only at a level that is absolutely necessary; (ii) basic concepts of modulation and demodulation techniques including amplitude modulation (AM), frequency modulation (FM) and phase modulation (PM) that are widely used in analogue communication systems, and basic techniques for analyzing such systems in the time and frequency domains; (iii) basic idea about classification of noise; (iv) fundamental ideas about Television (TV) and basic techniques for analyzing the fundamentals TV receiver.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand the theoretical concept, generation of Amplitude modulation, Angle modulation, AM Transmitter and Receiver, FM Transmitter and Receiver,
ILO / CO: 2	Analyze and Identify the effect of DSB-SC, SSB, VSB, FM and PM in terms of modulation index and bandwidth efficiency.
ILO / CO: 3	Estimate the noise performance AM and FM signals.
ILO / CO: 4	Recognize and illustrate the theoretical operation of Radio, TV Transmitter and Receiver.
ILO / CO: 5	Prepare and Present a term presentation on selected topic.

Course Contents:

Mid-term Exam: 30 Marks

- Basic Concept:** Basic communication system, Modulation, Demodulation, Importance, Types of modulation, Standard classification of RF spectrum
- AM modulation:** AM theory, Power & Current of AM, Modulation index, Transmission efficiency, Square & switching modulation and demodulation, DSB-SC, Balance and Ring modulation, Coherent detection, SSB modulation- Filter method, Phase shift method, Third method, VSB modulation process and applications
- Angle modulation:** Generation of FM wave, Theory of FM & PM, Frequency deviation, Relation between FM & PM, Narrowband FM, Wideband FM, FM generation, Pre-emphasis and de-emphasis circuit.

Final Exam: 50 Marks

Part – A: 20-Marks

- Transmitter: AM Transmitter:** Classifications, Master oscillator, Harmonic generators, SSB transmitter, Radio telegraphy transmitter, Frequency shift keying transmitter, **FM Transmitter:** Reactance modulator, Frequency drift, Frequency mixing, Armstrong FM transmitter,
- Radio Receiver: AM receiver:** Classification, TRF receivers, Super heterodyne receiver, RF amplifier, Sensitivity, selectivity & fidelity of receiver, Frequency mixers, IF amplifier, Noise limiter, Spurious response in radio receivers, **FM receiver:** Amplitude limiter, FM receiver- AGC & AFC, Slope detector, Balance slope detector, Center-tuned discriminator/ Foster-seeley discriminator, Ratio detector, PLL

Part – B: 30-Marks

- Noise: Classification,** Noise in receiver, AWGN, SNR, Analysis of noise effects on baseband systems, Effect of noise- AM, DSB-SC, SSB and FM
- Fundamentals of Television:** Block diagram of monochromatic TV, Aspect ratio, Horizontal & vertical scanning, Standard scanning pattern, Flickers, Composite video signal, Picture tube,

Synchronization, Blanking pulses, different TV system, Vestigial sideband transmission, TV channel for broadcast.

3. **TV Receiver:** Types, Basic principle of TV receiver, Picture tubes, Deflection circuit, High voltage power supply.

Course Title: BASIC COMMUNICATION ENGINEERING SESSIONAL

Credit Hour: 1.5/ Contact Hour: 3 per week

Course Outcomes:

ILOs / Cos	Description
ILO / CO: 1	Apply the knowledge of the basic functions of an analog communication system to justify the theoretical concept in different experiments of the analog communication system.
ILO / CO: 2	To provide hands-on experience to the students, so that they are able to apply theoretical concepts in practice.
ILO / CO: 3	Investigate the performance, effect of modulation and demodulation process such as AM, DSB-SC, SSB, FM also Radio, TV Transmitter and Receiver System using Hardware Tools.
ILO / CO: 4	To write and Execute Programs in MATLAB to Simulate Various Modulation and Demodulation Techniques.
ILO / CO: 5	Able to do the lab works individually and as members or leader of a teams.

Course Contents:

S.L.	Contents
[1].	Introduction to the course, Basic Guidelines and advises for the course, Discussion about laboratory safety and Training Requirements on working in the LAB.
[2].	Experiment on Amplitude Modulation and Demodulation to calculation of modulation index with spectrum to variable's value changing using Hardware
[3].	Experiment on Amplitude Modulation and Demodulation to calculation of modulation index with spectrum to variable's value changing using Software.
[4].	Experiment on DSB-SC Modulation and Demodulation using Hardware
[5].	Experiment on DSB-SC Modulation and Demodulation using Software.
[6].	Experiment on SSB Modulation and Demodulation using Hardware.
[7].	Experiment on AM Transmitter and Receiver using Hardware Tools.
[8].	Study on Basic Construction on Cathode Ray Tube (CRT) and Observation Circuit Diagram of TV

Course Code: CCE – 2411
Course Title: DIGITAL LOGIC DESIGN
 Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

Digital Electronics and Logic Design is a foundational course for those majoring in the communication option in second year. This course introduces/analyze students to: i) Introduce the concept of digital and binary systems ii) Be able to design and analyze combinational logic circuits. iii) Be able to design and analyze sequential logic circuits. iv) Understand the basic hardware tools for the design and implementation of digital circuits and systems v) Reinforce theory and techniques taught in the classroom through experiments and projects in the laboratory.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	To get introduce basic digital Electronics, Boolean algebra and fundamental concept for designing logic circuits with simplification various techniques.
ILO / CO: 2	Ability to solve Combinational Logic Circuit and Sequential Circuit.

Course Contents:

Mid-term Exam: 30 Marks

2. Introduction

Digital vs. analog systems. Advantages of digital system, Application of Digital system, Digital waveform, Data Transfer, NOR, NAND, AND, OR, INVERT Implementation. Diode logic gates, Transistor Switch. Logic Families: TTL, ECL, IIL and CMOS logic with operation details

3. Number Systems and Codes

Representation of Number in different bases. binary arithmetic, octal arithmetic, hexadecimal arithmetic. Base conversions. Base Complement: Subtraction using Complements. Binary codes.

4. Algebraic Methods for the Analysis and Synthesis of Logic Circuits

Fundamentals of Boolean algebra. Basic postulates: fundamental theorems of, Boolean algebra, switching functions, truth tables. Algebraic forms of switching functions. Derivation of canonical forms. Switching circuits.

Final Exam: 50 Marks

Part – A: 20-Marks

5. Simplification of Switching Functions

Characteristics of minimization methods. Karnaugh maps. K-maps of four or more variables. Simplification of switching functions using K-maps. Tabular minimization method.

6. Combinational Logic Circuits, Design Procedure, Adder, subtractor, Code Converter, parity Checker etc, Analysis of Combinational Circuits and its truth table, Encoder, Decoder, ROM and PLA.

Part – B: 30-Marks

7. Multiplexers/Data. Selectors. Multiplexer Circuit Structures. Applications of Multiplexers.

Demultiplexers/Data Distributors. Binary Arithmetic Elements. Binary Adder Circuits. Binary Subtraction Circuits. Comparators.

8. Introduction to Sequential Logic Models for sequential circuits. Block diagram representation. State tables and diagrams. Memory devices. Latches: set-reset latch, gated SR latch, delay latch. Flip-flops: master-slave SR flip-flops, master-slave D flip-flops, master-slave JK flip-flops, edge-triggered D flip-flops, edge-triggered JK flip-flops, T flip-flops.

9. Design of counters, shift registers and their applications

Text Books:

1. M. Morris Mano, *Digital Logic and Computer Design*, 4th Ed., Prentice Hall, India.
2. J.F. Wakerly, *Digital Design Principles & Practices*, 4th Ed., Prentice Hall, 2005
3. Floyd &Jain, *Digital Fundamentals*, Pearson Education, 8th ED.2009

2. Tocci-Widme, *Digital Systems*, Pearson/Prentice Hall, 2004

Course Code: CCE – 2412
Course Title: DIGITAL LOGIC DESIGN SESSIONAL

Credit Hour: 1.5/ Contact Hour: 3 per week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Get introduced to Basic trainer Board and implement various Digital Circuitry related design problems.
ILO / CO: 2	To solve design circuitry problem by teamwork.

Course Contents:

S.L.	Contents
1.	Digital vs. analog systems. Advantages of digital system, Application of Digital system,
2.	Diode logic gates, Transistor Switch. Logic Families: TTL, ECL, IIL and CMOS logic with operation details
3.	Digital waveform, Data Transfer, NOR, NAND, AND, OR, INVERT Implementation.
4.	Verification of basic logic gates
5.	Justifying NAND and NOR logic gate
6.	Verification of application of half adder circuit
7.	Verification of application of full adder circuit
8.	Implementation of XOR and XNOR gate
9.	Verification of operation of half and full subtractor
10.	Verification of operation of odd parity generator

Course Notes:

Course Code: ETE – 3501
Course Title: MICROPROCESSOR & ASSEMBLY LANGUAGE

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

1. The objective of this course is to become familiar with the architecture and the instruction set of an Intel microprocessor. Assembly language programming will be studied as well as the design of various types of digital and analog interfaces. The accompanying lab is designed to provide practical hands-on experience with microprocessor software applications and interfacing techniques
2. To provide the students on developing of assembly level programs parallel providing the basics of processors.
3. To provide students with solid foundation on interfacing the external devices to the processor according to the user requirements to create novel products and solutions for the real-life problems.
4. To assist the students with an academic environment aware of excellence, guidelines and lifelong learning needed for a successful professional carrier.

Course Outcomes:

ILOs/COs	Contents
ILO /CO 1	Gain knowledge of assembly level programming to write and test programs of moderate complexity for a real-time machine
ILO /CO 2	Apply knowledge to design circuits for various applications using Microcontrollers

Course Contents:

Mid-term Exam: 30 Marks

Introduction to Microprocessor

1. Basic architectures Von-Neumann and Hardwired, Evolution of Microprocessors, Computer generations and classifications, Mainframe, Mini, Micro and super computers, Microcomputer block diagram, different input output devices, different memory devices (Primary and Secondary).
2. Difference between microprocessor, microcomputer, microcontroller. Concept of multiprogramming multiprocessing, multiuser system, parallel processing.

Microprocessor 8085, 8086 and 80386

1. Pin-out diagram and pin description, Architecture, Instruction and data flow, addressing modes, Instruction fetch & execute, machine cycles, instruction cycle, timing diagrams, state transition diagram, instruction groups and instruction set.

Final Exam: 50 Marks

Part – A: 20-Marks

1. Assembly language programming: Simple arithmetic programs, data transfer array, string, bit manipulation, code conversion, delay routine and stack operations.

I/O interfacing and Memory System Design

2. Address design need of I/O, ports I/O, mapped I/O, memory mapped I/O, data transfer schemes PPI 8255 its modes, interface, initialization and programming.

Part – B: 30-Marks

1. Interfacing of key, L. E. D., seven segment, Dot matrix display, ADC 0808, and DAC 0809, with PPI 8255, address decoder and memory system design interface, stepper motor controller interfacing with 8255.

Peripheral Devices

2. 8251, 8253, 8257, 8279, interface with 8085, initialization and application-oriented programming. Data transfer schemes.
3. Interrupts SIM/RIM, PIC 8259 interface, initialization and programming with 8085, Micro Processor System Design, 8085 applications such as: Programmable Logic Controller, Temperature controller,

Course Title: MICROPROCESSOR & ASSEMBLY LANGUAGE SESSIONAL

Credit Hour: 1/ Contact Hour: 2 per week

Course Outcome:

ILOs/COs	Contents
ILO /CO 1	Analyze, write and test assembly language programs of moderate complexity

Course Contents:

S.L.	Contents
1.	Introduction to Assembly Language
2.	Write an Assembly program for printing 'Hello World'
3.	Write an Assembly program to understand the use of Register in Assembly program
4.	Write an Assembly program that reads a number from keyboard and display it on the screen
5.	Write an Assembly program for Arithmetic instruction (Addition, Multiplication, Division)
6.	Write an Assembly program for logical instruction ('AND' & 'OR' operation)

Course Notes:

Lab Manual Prepared by course instructor.

Course Code: CCE – 3503**Course Title: INFORMATION THEORY & ERROR CORRECTION CODING**

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

This course aims to address the efficient error free and secure delivery of information using binary data streams. For efficiency, the information source is coded to reduce redundancy. To minimise the effects of errors, channel coding is employed and, finally, cryptographic techniques are required to make the data secure. The aim is to present the basic theory and objectives of each of these steps, together with the basics of information theory.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Familiarization with the various fields/trends of communications like Information theory, error detection and error correction related to radio and telecommunication.
ILO / CO: 2	Analysis different types of error control code properties for secure and error free efficient communications.

Course Contents:**Mid-term Exam: 30 Marks****1. Information Sources and Sources Coding**

Logarithmic measure for information, self and average information. Entropy, information rate, discrete sources, extensions of a discrete source, Shannon's source coding theorem.

2. Markov source. Joint and conditional entropy. Source coding theorem and algorithms. Kraft inequality, Huffman code, prefix code,**3. Lempel-Ziv code, rate distortion theory. Scalar and vector quantization, waveform coding. Orthogonal Codes, biorthogonal Codes. Simplex Code. Application examples: MPEG audio compression, JPEG image compression standard and MPEG video compression.****Final Exam: 50 Marks****Part – A: 20-Marks****4. Channel Capacity and Coding**

Discrete channels, mutual information, Properties of Mutual Information, channel capacity, Shannon's channel coding theorem, bandwidth S/N trade-off. Channel capacity theorem.

5. Model of digital communication system employing coding. History of Coding, Types of Coding, Types of Decoding, Types of Error Control, Code Rate and Redundancy, Hamming distance, Hamming weight, Hamming bound. parity check codes, Hamming codes, Cyclic Codes.**Part – B: 30-Marks****6. Linear block codes, generator and parity check matrix, syndrome decoding. Cyclic codes, generation and detection. Coding for reliable communication, coding gain, bandwidth expansion ratio. Comparison of coded and uncoded systems.****7. Convolutional Codes, Encoding, Encoder representation, impulse Response of the Encoder, polynomial Representation, state representation and the State Diagram, Code tree, Trellis diagram, Turbo coding, LDPC****8. Decoding of convolutional codes, Viterbi's algorithm, sequential decoding. Transfer function and distance properties of convolutional codes. Error Correction Capability of Convolutional Codes, Coding gain. Application example: GSM systems.****Text Books:**

Course Code: CCE-3505
Course Title: DATABASE MANAGEMENT SYSTEMS

Credit Hours: 3/ Contact Hours: 3 per week

Prerequisite Course: CCE-2301

Course Objectives:

On successful completion of this course, you will be able to:

1. To understand the role of a database management system in an organization.
2. To understand basic database concepts, including the structure and operation of the relational data model.
3. Construct simple and moderately advanced database queries using Structured Query Language (SQL).
4. To Understand and successfully apply logical database design principles, including E-R diagrams and database normalization.
5. To Design and implement a small database project using Microsoft Access.
6. To understand the concept of a database transaction and related database facilities, including concurrency control, journaling, backup and recovery, and data object locking and protocols.
7. To Describe and discuss selected advanced database topics, such as distributed database systems and the data warehouse.
8. Understand the role of the database administrator.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Familiarization with the database system, RDBMS, SQL, transaction processing and concurrency control.
ILO / CO: 2	Design and development of a database application system

Course Contents:

Mid-term Exam: 30 Marks

1. **Introduction:** Database-System Applications, Purpose of Database Systems, View of Data, Database Languages, Relational Databases, Database Design, Data Storage and Querying, Transaction Management, Database Architecture, Data Mining and Information, Retrieval, Specialty Databases, Database Users and Administrators.
2. **Introduction to the Relational Model:** Structure of Relational Databases, Database Schema, Keys, Schema, Diagrams, Relational Query Languages, Relational Operations.
3. **Introduction to SQL:** Overview of the SQL Query, Language, SQL Data Definition, Basic Structure of SQL, Queries, Additional Basic Operations, Set Operations, Null Values, Aggregate Functions, Nested Sub-queries, Modification of the Database, Join Expressions, Views, Transactions, Integrity Constraints, SQL Data Types and Schemas, Authorization.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **Advanced SQL and Relational Query Languages:** Accessing SQL From a Programming, Language, Functions and Procedures, Triggers, Recursive Queries, Advanced Aggregation Features, OLAP, The Relational Algebra, The Tuple Relational Calculus, The Domain Relational Calculus.
5. **Database Design and the E-R Model:** Overview of the Design Process, Entity-Relationship Model, Constraints, Removing Redundant Attributes in Entity Sets, Entity-Relationship Diagrams, Reduction to Relational Schemas, Entity-Relationship Design Issues, Extended E-R Features, Alternative Notations for Modeling, Data, Other Aspects of Database Design.

Part – B: 30-Marks

6. **Relational Database Design:** Features of Good Relational Designs, Atomic Domains and First Normal Form, Decomposition Using Functional Dependencies, Functional-Dependency Theory,

Algorithms for Decomposition, Decomposition Using Multivalued Dependencies, More Normal Forms, Database-Design Process, Modeling Temporal Data, Multivalued Dependencies, Domain-Key Normal Form.

7. **Application Design and Development:** Application Programs and User Interfaces, Web Fundamentals, Servlets and JSP, Application Architectures, Rapid Application Development, Application Performance, Application Security, Encryption and Its Applications.
8. **Object-Based Databases:** Complex Data Types, Structured Types and Inheritance in SQL, Table Inheritance, Array and Multiset Types in SQL, Object-Identity and Reference Types in SQL, Implementing O-R Features, Persistent Programming Languages, Object-Relational Mapping, Object-Oriented versus Object-Relational.

Text books:

1. H. F. Korth, *Database System Concept*, 4th Edition, Mcgraw Hill

Course Code: CCE-3506
Course Title: DATABASE MANAGEMENT SYSTEMS SESSIONAL
 Credit Hours: 1/ Contact Hours: 2 per week

Course Objectives:

The objective of this course is to inculcate the abilities of applying the principles of the database management systems. This course Objective to prepare the students for projects where a proper implementation of databases will be required. Objective are listed below.

1. To understand data definitions and data manipulation commands
2. To learn the use of nested and join queries
3. To understand functions, procedures and procedural extensions of data bases
4. To be familiar with the use of a front end tool
5. To understand design and implementation of typical database applications

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Use typical data definitions and manipulation commands.
ILO / CO: 2	Design applications to test Nested and Join Queries
ILO / CO: 3	Implement simple applications that use Views
ILO / CO: 4	Implement applications that require a Front-end Tool
ILO / CO: 5	Critically analyze the use of Tables, Views, Functions and Procedures

Course Contents:

Contents
1. Data Definition Commands, Data Manipulation Commands for inserting, deleting, updating and retrieving Tables and Transaction Control statements
2. Database Querying – Simple queries, Nested queries, Sub queries and Joins
3. Views, Sequences, Synonyms
4. Database Programming: Implicit and Explicit Cursors
5. Procedures and Functions
6. Triggers
7. Exception Handling
8. Database Design using ER modeling, normalization and Implementation for any application
9. Database Connectivity with Front End Tools
10. Case Study using real life database applications

Text Books:

A Lab Manual Prepared by instructor

Course Code: CCE-3507
Course Title: SYSTEMS ANALYSIS, DESIGN AND DEVELOPMENT
 Credit Hours: 2/ Contact Hours: 2 per week

Course Objectives:

The student who completes this course should know:

1. The traditional systems/software development methodologies.
2. Traditional analysis and design techniques: entity-relationship diagrams, data flow diagrams, and data dictionaries.
3. How to use prototyping in the analysis and design phases of systems development.
4. Project planning: defining the scope, purpose and activities of a project; setting up a project management web page.
5. PERT/CPM project management techniques, including the use of Microsoft Visio.
6. What a CASE tool is and how it is used in software development.
7. How Object-Oriented methodology techniques work

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Define and describe the five phases of the system development life cycle.
ILO / CO: 2	Describe how systems analysts interact with users, management, and other information systems professionals.
ILO / CO: 3	Develop data flow diagrams and decision tables.
ILO / CO: 4	Evaluate systems development alternatives.

Course Contents:

Section-A (Mid-term: 30 Marks)

1. **Concepts of system and its environment:** Information, Types of information, Quality of information, System, Types of systems, Components of system, Source of information.
2. **Information gathering:** strategy, Information searching methods, Interviewing technique, System development methodologies and life cycle.
3. **Feasibility study & Cost/Benefit analysis:** Feasibility considerations, steps in feasibility analysis, feasibility report, Cost and Benefit categories, procedure for cost and benefit determination, classification of cost and benefit, cost and benefit evaluation methods.

Section-B (Final Exam: 50 Marks)

Group-A (20 Marks)

1. **Tools of analysis and design:** Data Flow Diagram (DFD), DFD symbols, Constructing DFD; Data Dictionary; Decision Tree, Structured English, Decision Tables.
2. **System Design and Construction:** The process of design, System design phases, Design methodologies; Structured design; Form-Driven methodology; Input design, Output design, File and database design.

Group-B (30 Marks)

1. **Testing and Quality Assurance:** Testing, Types of system tests; White-Box testing; Black-box testing; Quality factors specifications.
2. **Implementation and Maintenance:** Types of implementation, Documenting the system, Training and supporting users, Factor models of implementation success; The process of maintaining information system, Types of maintenance, Cost of maintenance, Reducing maintenance cost.
3. **Hardware/ Software selection, control and security:** Phases in selection, Criteria for software selection, Hardware selection, Financial considerations in selection; Security definitions, Threats to system security, Control measures, system failures and recovery.

Recommended Books:

- | | |
|---------------------------------------|---|
| 1. System Analysis and Design | : Alan Dennis, Barbara Haley Wixom |
| 2. System Analysis and design | : Elias M. Awad |
| 3. System Analysis and Design Methods | : Jeffrey L. Whitten, Lonnie D. Bentley |
| 4. Modern System Analysis and Design | : Jeffrey A. Hoffer, Joey F. George |

Course Code: CCE - 3508**Course Title: SYSTEM ANALYSIS, DESIGN AND DEVELOPMENT SESSIONAL**

Credit Hours: 1/ Contact Hours: 2 per week

Course Objectives:

At the end of the course students should know how writing programs with tough assurance targets, in large teams, or both, differs from the programming exercises they have engaged in so far. They should appreciate the waterfall, spiral and evolutionary models of software development and be able to explain which kinds of software project might profitably use them. They should appreciate the value of other tools and the difference between incidental and intrinsic complexity. They should understand the software development life cycle and its basic economics. They should be prepared for the organizational aspects of their Part IB group project.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Acquire the generic software development skill through various stages of software life cycle as well as able to ensure the quality of software through software development with various protocol-based environment.
ILO / CO: 2	Able to generate test cases for software testing.
ILO / CO: 3	Able to handle software development models through rational method.

Lab Experiments:

Students have to develop a larger piece of software in the Software Engineering Lab. The main objective is to learn group work and to gain practical experience with some software engineering methodologies, methods and supporting tools. The lab is organized into four phases:

1. System design and specification (3 weeks)

Students are given a larger problem to solve. Groups of up to 5 students develop a design document which identifies key components, the interfaces between those components, and the integration tests that can be used later to verify that the system is working correctly. The resulting design document will be graded in the 3rd week of the lab. Grading criteria:

- ✓ Design quality and correctness (20%)
- ✓ Usability of the design document (10%)
- ✓ Organization of the design document (10%)
- ✓ Structural UML diagrams (e.g., class diagrams) (10%)
- ✓ Behavioral UML diagrams (e.g., sequence or collaboration diagrams) (10%)
- ✓ Description and completeness of test cases (20%)
- ✓ Presentation of the design during the lab (20%)

Several groups will develop independent design solutions for the same problem. The designs will be presented, and the best designs will be selected for further development.

2. Component development using extreme programming (8 weeks)

In the second phase, students will exercise extreme programming cycles in order to develop components identified by the overall system design. Each cycle lasts two weeks (since students only work part-time on the lab). After each cycle, the progress will be discussed, and plans will be fixed for the next cycle. Students work in teams of two students in each cycle and groups will change every cycle. The results produced in each cycle will be graded. Grading criteria:

- ✓ Challenge and degree of achievement of negotiated task (25%)
- ✓ Code quality (proper use of language, information hiding, make files, ...) (25%)
- ✓ Test cases (executable, sufficient in number and quality, ...) (25%)

- ✓ Adequate code documentation, consistency with design documentation (25%)

3. System integration and system testing (2 weeks)

The third phase is concerned with the integration of the components and the testing of the overall system. The integration test cases identified in phase 1 should be exercised (or updated and complemented as needed). Students work now again in larger groups. The system integration and testing phase must be documented appropriately, and the documentation will be graded.

4. Tournament and wrap up (1 week)

In the last phase, there will be a tournament where students can let bugs play against each other. Students who write smart bugs may get some bonus points.

Recommended Books:

- | | |
|-------------------------------|------------------------------------|
| 1. System Analysis and Design | : Alan Dennis, Barbara Haley Wixom |
| 2. System Analysis and design | : Elias M. Awad |

Course Code: CCE – 3509
Course Title: COMPUTER ARCHITECTURE
 Credit Hours: 2/ Contact Hours: 2 per week

Course Objectives:

1. This course provides an overview of the architecture and organization of a computer hardware system and how it is built.
2. It includes a discussion of the CPU, memory, I/O organization and peripherals.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Describe the central processing unit focusing on instruction set design and data representation.
ILO / CO: 2	Apply arithmetic algorithms and interpret the processed data.
ILO / CO: 3	Appraise the control unit design and I/O system design
ILO / CO: 4	Recognize the principal memory technologies from a hierarchical view point with emphasis on cache memory.
ILO / CO: 5	Outline the design of a pipelined and superscalar processor.

Course Contents:**Section-A (Mid-term: 30 Marks)**

1. Information representation, Performance measurement
2. Instruction and data access methods
3. Arithmetic Logic Unit (ALU): arithmetic and logical operations floating point operations, ALU design

Section-B (Final Exam: 50 Marks)**Group-A (20 Marks)**

4. The control unit (Single cycle Data path): hardwired and micro programmed
5. The control unit (Multiple cycle Data path): hardwired and micro programmed

Group-B (30 Marks)

6. Hazard; Exceptions; Pipelining
7. Memory organization
8. I/O systems, channels, interrupts, DMA

Recommended Books:

1. J. P. Hayes : Computer Architecture and Organization
2. Dr. M. Rafiquzzaman : Fundamentals of Computer System Architecture
3. Romesh S. Gaonkar : Microprocessor, Architecture, Programming and Application with 8085
4. John Hennesy, David Patterson : Computer Organization.
5. ShafwatZaky : Computer Architecture

Course Code: CCE-3511
Course Title: Electromagnetic Fields and Waves
 Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

The overall aim of the course is to introduce the students to the basic principles of Electrostatics, Magnetostatics and Electromagnetic Waves. The course equips the students with techniques to determine Electric Field and Magnetic Field for different scenarios. It also equips the student with analysis of Electromagnetic Waves of different frequencies, propagation of waves through different guided and unguided mediums etc. The course will help the students with knowledge and skills that will help them solve complex engineering problems related to overall electromagnetism, antenna designing, microwave and mm-wave communication components designing, optical fiber communication etc.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand and analyze the basic concepts related to Electrostatics, Magnetostatics and Electromagnetic Waves.
ILO / CO: 2	Determine Electric and Magnetic Field for different scenarios with varying specifications using different techniques.
ILO / CO: 3	Analyze propagation of Electromagnetic Waves in different mediums using Maxwell's Equations.

Course Contents:

Mid-term Exam: 30 Marks

- Electrostatics:** Coulomb's law, force, electric field intensity, electrical flux density. Gauss Law with application, Divergence of an Electrostatic Field, Electrostatic potential, Electric Dipole, boundary conditions in Electrostatics, The use of images, Laplace's and Poisson's equation energy of an electrostatic system.
- Magneto statics:** Concepts of magnetic field, Ampere's law, Stokes Theorem, Vector magnetic potential, Magnetic Dipole, Energy of a static Magnetic Field, Completeness of Specification of Electric and Magnetic Fields
- Co-ordinate System:** rectangular, cylindrical and spherical coordinates Solution to static field problems. Graphical field mapping with applications, solution to Laplace equations, rectangular, cylindrical and spherical harmonics with applications.

Final Exam: 50 Marks

Part – A: 20-Marks

- Maxwell's equations:** Voltages induced by changing Magnetic Fields, Continuity of charge, the concept of displacement current physical pictures of displacement current, Maxwell's Equations in Differential equation form, in large Scale form and for the time periodic case.
- Propagation of E-M waves:** Poynting's Theorem for Energy relations in an Electromagnetic Field. Application of Maxwell's equations in Wave Propagation, Application of Maxwell's Equations in Penetration of Electromagnetic Fields into a Good Conductor.

Part – B: 30-Marks

- Boundary Conditions:** Boundary Conditions for Time Varying systems, Wave Propagation. Potentials used with varying charges and currents. The Retarded Potential concepts. Maxwell's equations in different coordinate systems.
- Transmission line:** Circuit Concepts and Impedance Elements. Skin Effect and Internal Impedance: Internal Impedance of a Plane wave, general equation of transmission line.
- Polarization and Reflection of E-M wave:** Uniform Plane waves in a Perfect Dielectric, Polarization of Plan Waves, Waves in Imperfect Dielectrics and Conductors. Reflection of Normally incident Plane Waves from perfect conductors, Normal Incidence on a Dielectric, Reflection Problems with several dielectrics, Incidences at any angle on perfect conductors Phase velocity and impedance for waves at oblique incidence, Incidence at any angle on dielectrics, Total Reflection, Brewster angle.

Course Title: DIGITAL SIGNAL PROCESSING

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

The overall aim of this course is to introduce the most important principles and methods in DSP environment. Consequently, the student will be able to implement the theoretical concepts, methods and algorithms for solving real world problems.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Interpret, represent and process discrete/digital signals and systems
ILO / CO: 2	Apply important algorithmic design paradigms and method of analysis in real life design problems.

Course Contents:

Mid-term Exam: 30 Marks

- Discrete Time Signals & Systems:** Discrete-time signals, Discrete-time systems, Linear Time-Invariant systems and their properties, Linear constant coefficient difference equations.
- Time-Domain Representation of Discrete Signals:** Frequency domain representation of discrete time signals and systems, Fourier transform of discrete sequences, Discrete time processing of continuous signals.
- Z-Transform and Its Applications:** Definition of z-transform, Region of Convergence, Properties of z-Transform, Inversion of the z-Transform, Analysis of Linear Time-Invariant Systems in the z-Domain.

Final Exam: 50 Marks

Part – A: 20-Marks

- Structure of Discrete Time Systems:** Block diagram representation of constant coefficient difference equations, IIR and FIR systems and their basic structures, Stability of discrete time systems, Finite word length effect.
- Discrete-Time Fourier Analysis:** Discrete Fourier Transform and its properties, Inverse Discrete Fourier Transform, Linear Convolution using Discrete Fourier Transform, Fast Fourier Transform, Decimation in time and Decimation in frequency.

Part – B: 30-Marks

- Digital Filter Design and Applications:** IIR filter design, bilinear z-transform design approach, IIR filter realization, FIR filter design, realization of FIR filter, application examples.
- Implementation of Digital Filters:** Block-diagram representations; direct forms; cascade forms, first and second-order factors; parallel forms; feedback loops transposed forms; linear-phase FIR structures.
- Multi Rate DSP:** Interpolation and decimation, poly-phase representation and multistage implementation. Perfect reconstruction filter banks: Power symmetric, alias-free multi-channel and tree structured filter banks.

Text Books:

Course Code: CCE - 3602
Course Title: DIGITAL SIGNAL PROCESSING SESSIONAL

Credit Hour: 1/ Contact Hour: 2 per week

Course Objective:

Overall aim of the course is to Design and implement a DSP system using MATLAB tool. Analyze and describe the functionality of a real-world DSP system. Work in teams to plan and execute the creation of a complex DSP system. Experiment concepts of DSP and its applications using MATLAB Software and apply DSP system design to real world applications.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Fundamentals of discrete-time signal transformation, properties and algorithms.
ILO / CO: 2	Analyze about various types of signals and their representation and their implementation on MATLAB.
ILO / CO: 3	Investigation of digital filter design for various applications and interpretation the z-domain transfer function of a discrete-time system
ILO / CO: 4	Simulation of digital signal processing models using MATLAB
ILO / CO: 5	Assign individual or group of student's tasks to design finite impulse response (FIR) and infinite impulse response (IIR) discrete-time filters for low-pass, high-pass, band pass, band stop, and arbitrary frequency response applications.
ILO / CO: 6	Lab report presentation of assigned lab tasks

Course Contents:

S.L.	Contents
1.	Study of Sampling, Quantization and Encoding
2.	Time domain Characterization of discrete time signals and systems
3.	Discrete time Fourier transform (DTFT) computation. Discrete Fourier transforms (DFT) & inverse DFT (IDFT) Computation.
4.	Computation of rational and Inverse Z Transform
5.	The Concept of Filtering and FIR Digital Filter Design.
6.	Design of Linear phase FIR Filter Based on Windowed Fourier Series Approach.
7.	Analog Filter Design (Butterworth Filter, Type 1 Chebyshev Filter & Elliptic Filter).
8.	Application of The FFT & IFFT function

Course Notes:

Lab Manual available in the Lab Titled ETE-4744: Digital signal processing Sessional

Course Code: CCE – 3606**Course Title: COMPUTER ANIMATION AND GAME DEVELOPMENT SESSIONAL**

Credit Hour 1.5/ Contact Hour: 3 per week

Course Objectives:

The student should be made to:

- Understand graphics programming
- Be exposed to creation of 3D graphical scenes using open graphics library suits
- Be familiar with image manipulation, enhancement
- Learn to create animations
- To create a multimedia presentation/Game/Project.
- Use the Unity Editor to create interesting game levels
- Create game scripts using C# and the Unity API
- Understand the fundamentals of using 2D and 3D graphics
- Become acquainted with advanced topics such as shaders, physics, AI, and Network based games.
- Understand the process of game development from idea to beta version
- Apply theories and develop and test an actual game

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Create 3D graphical scenes using open graphics library suits
ILO / CO: 2	Implement image manipulation and enhancement
ILO / CO: 3	Create 2D animations using tools
ILO / CO: 4	Create a game

Course Contents:

Contents
1. Implementation of Algorithms for drawing 2D Primitives – Line
2. (DDA, Bresenham) – all slopes Circle (Midpoint)
3. 2D Geometric transformations – Translation Rotation Scaling Reflection Shear Window-Viewport
4. Composite 2D Transformations
5. Line Clipping
6. 3D Transformations – Translation, Rotation, Scaling.
7. 3D Projections – Parallel, Perspective.
8. Creating 3D Scenes.
9. Image Editing and Manipulation – Basic Operations on image using any image editing software, Creating gif animated images, Image optimization.
10. 2D Animation – To create Interactive animation using any authoring tool.
11. 2D Platform Game: • Full Unity project including source code, assets and project settings. • Work schedule and a description of the implementation structure, showing the layout and interaction of the game logic.
12. Final Project: • Full Unity project including source code, assets and project settings. • Work schedule and a description of the implementation structure, showing the layout and interaction of the game logic.

Course Title: CELLULAR MOBILE COMMUNICATION

Credit Hour 2/ Contact Hour: 2 per week

Course Objectives:

The course addresses the fundamentals of wireless communications and provides an overview of existing and emerging wireless communication Technology and networks. It covers radio propagation and fading models, fundamentals of cellular communications, multiple access technologies, and various wireless systems like GSM, CDMA etc., including past and future generation wireless networks.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understanding of basic wireless and cellular communication techniques.
ILO / CO: 2	Ability to solve different propagation and path loss model related problems. Comprehend the operation of GSM and other types of Cellular Mobile Communication system, Diversity techniques, Rake Receiver, Multiple Input Multiple Output (MIMO) technique, underwater communication system etc.

Course Contents:

Mid-term Exam: 30 Marks

- 1. Introduction to Wireless Communications (WC):**
Evolution of Mobile Radio Communication, Example of WC, Comparison of common WC systems, second generation, third generation, fourth generation wireless network.
- 2. Cellular Concept:**
Historical development of Cellular Mobile Communication. A Mobile Wireless to Cellular concept, Frequency reuse and its application for different types of cell design, Co-channel interference and non-co channel interference, other Interferences. Call drops and necessity of Handoffs, types of Handoffs.
- 3. Capacity Enhancement:**
Cell design, 4 cell and 7 cell design concept, Cell divisions, Sectoral Antennas for the cell sites for different types of cell design, Types of antennas used in Cell sites.

Final Exam: 50 Marks

Part – A: 20-Marks

- 1. Large scale path loss:**
Introduction to radio wave propagation, Free space propagation models, Reflection, Diffraction, Scattering, Outdoor propagations models, indoor propagations models.
- 2. Small Scale Path loss:**
Small scale multipath propagation, Doppler shift, Parameters of mobile multipath channel, Rayleigh and Rician distribution details.

Part – B: 30-Marks

- 1. GSM Architecture:**
GSM, specifications for cellular telephony, Difference between GSM and other types of Cellular Mobile Communication system, GSM Architecture, Functions of MSC, BSC, BTS and other functional blocks (subsystems and parts) of a GSM system, Situations and Techniques of Handover in GSM.
- 2. GSM Channels and Coding:**
Different types of Channels and Signaling in GSM, Voice and Control channels of a GSM system, Channel Structure and traffic channels, Control Channel and Burst structure, Speech Coding, Channel coding, modulation and power coding in GSM.
- 3. Advanced Cellular:**

Fundamentals of Equalization, Diversity techniques, Rake Receiver, Multiple Input Multiple Output (MIMO) technique, Introduction to underwater communication system, Recent wireless communication systems.

Text Books:

1. Rappaport. T.S., "*Wireless communications*", Pearson Education, 2003.
2. Gordon L. Stuber, "*Principles of Mobile Communication*", Springer International Ltd., 2001.
3. Andrea Goldsmith, "*Wireless Communications*", Cambridge University Press, 2007.

References:

1. Andreas.F. Molisch, "*Wireless Communications*", John Wiley – India, 2006.

Course Code: ETE – 3608

Course Title: CELLULAR MOBILE COMMUNICATION SESSIONAL

Credit Hour: 1/ Contact Hour: 2 per week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Simulate different Cellular System using MATLAB.
ILO / CO: 2	Ability to solve different propagation and path loss model related problems. Comprehend the operation of GSM and other types of Cellular Mobile Communication system, Diversity techniques, Rake Receiver, Multiple Input Multiple Output (MIMO) technique, underwater communication system etc.

Course Contents:

S.L.	Contents
1.	Introductory MATLAB command
2.	Introductory MATLAB for communication: User defined functions, Plotting, creating plot with special type, adding titles, axis labels annotations
3.	Experiment on free space propagation model
4.	Experiment on Capacity, Interface calculation due to reuse of channel and bandwidth
5.	Experiment on calculating received power in two ray propagation models
6.	Experiment on small scale fading: Data transmission and reception with Rayleigh Fading
7.	Experiment on brief discussion of multiple access technique
8.	Experiment on data transmission and reception using Rician fading

Course Notes:

Lab Manual Prepared by course instructor.

Reference Books:

1. Rappaport. T.S., "*Wireless communications*", Pearson Education, 2003.

3. Andrea Goldsmith, "*Wireless Communications*", Cambridge University Press, 2007.

Course Code: CCE – 3609
Course Title: SOFTWARE ENGINEERING
 Credit Hours: 2/ Contact Hours: 2 per week

Course Objectives:

- Be able to identify, formulate, and solve software engineering problems, including the specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements
- Be able to elicit, analyze and specify software requirements through a productive working relationship with various stakeholders of a software development project
- Be able to understand of professional, ethical and social responsibility of a software engineer
- Be able to understand of different software architectural styles.
- Be able to understand of implementation issues such as modularity and coding standards.
- Be able to understand of approaches to verification and validation including static analysis, and reviews.
- Be able to convey technical material through written reports which satisfy accepted standards for writing style

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand different process models and concepts such as design lifecycles, cost estimation techniques, and testing methods.
ILO / CO: 2	The student will able to relate and outlines the engineering process of software and will be able to explain, apply in software development process.
ILO / CO: 3	Enhance team work, critical thinking and communication skills to construct software of high quality.
ILO / CO: 4	Develop skills to make use of tools that helps in software specification, design, testing, and maintenance.

Course Contents:

Section-A (Mid-term: 30 Marks)

- 1. Introduction:** Software, nature and problems of software, engineering vs. software engineering, state of the art of software engineering, characteristics of software, basic elements of engineering Software, software process model, costs of software engineering, software engineering methods, professional and ethical responsibility of a software engineer.
- 2. Software Processes:** Software process and software process model, different software process models: linear sequential, water fall, prototyping, incremental, spiral, advanced software development life cycle and other appropriate models.
- 3. Software Requirements:** Requirement definition, Functional and non-functional requirements, requirement specification, software Prototyping, Basic concepts of different formal software specification techniques

Section-B (Final Exam: 50 Marks)

Group-A (20 Marks)

- 4. Requirement Engineering Processes:** requirement engineering process, software requirements document, requirement validation and evolution, requirement analysis process model, system context, social and organisational factors, data-flow models, semantic data models, object models, Data dictionaries,
- 5. Software Design:** Context of software design, design process, design quality and strategies, system structuring, control models, modular decomposition, domain-specific architecture, data-flow design, structural decomposition, detailed design, JSP, Coupling and Cohesion, attributes of design, object-oriented design and Component-level design, design principles, user-system interaction, information presentation, user guidance, interface evaluation, design for reuse.

Group-B (30 Marks)

- 6. Software Validation and Verification:** Verification and validation planning, testing fundamentals, including test plan creation and test case generation, black-box and white-box testing techniques, unit, integration, validation, and system testing, object-oriented testing, inspections
 - 7. Software Evolution:** Software maintenance, characteristics of maintainable software, re-engineering, legacy systems, Software reuse and configuration.
 - 8. Software Management:** Cognitive fundamentals, management implications, project staffing, software cost estimation techniques, different models (COCOMO, tree, PNR curve, statistical and Delphi), process quality assurance, Software and documentation standards, software metrics and product quality metrics, Zipf's law, Halstead formula, Fan in/Fan out, information Fan in/Fan out, Henry and Kafura's metric, Card and Glass's Systems Complexity, process and product quality, process (analysis, modeling, measurement, SEI process maturity model and classification).
- Others:** Software reliability metrics, software reliability specification, statistical testing and reliability growth modeling, Use of CASE tools and technological support in engineering software, introduction to unified modeling language–UML

Recommended Books:

| 2. Roger S. pressman | : Software Engineering –A practitioner Approach |

Course Code: CCE – 3611
Course Title: DIGITAL COMMUNICATION ENGINEERING

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives:

The aim of this course is to provide students with a good understanding of digital communications principles and digital techniques required in the rapidly expanding field of digital signal transmission and modulation in communication systems. Students will use standard mathematical methods to model and analyses digital communication systems and predict performance metrics such as received SNR and expected bit error ratio. The firm grounding in digital communications fundamentals and digital methods will also prepare students to anticipate, appraise and pursue future trends in digital communications research and technologies.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Identify and understanding the basic knowledge of digital communication system and theory. (Po1)
ILO / CO: 2	Apply the knowledge for different digital modulation technique, data transmission and performance evaluation. (po1)
ILO / CO: 3	Prepare and present a term paper for a specific topic. (po12)

Course Contents:

Mid-term Exam: 30 Marks

1. Introduction to Digital Communications

Digital vs. analog communications, digital communication block diagram, classification of signals, spectra and filtering, signal transmission through linear systems,

2. Digital Communications Theory

Orthogonal functions, random processes, autocorrelation, power spectrum, systems with random input/output, bandwidth of digital data, Information Capacity Theorem revisited, and bandwidth-efficiency diagram.

3. Pulse Modulations and Digitization of Speech Signals

Pulse amplitude modulation, pulse width modulation, pulse position modulation, time division multiplexing. Sampling theorem, sample-and-hold.

Final Exam: 50 Marks

Part – A: 20-Marks

1. Pulse Modulation

Pulse code modulation (PCM), quantization noise, narrowband noise, Companding, differential PCM, delta modulation, overload noise, adaptive delta modulation.

2. Baseband Data Transmission

Line coding, intersymbol interference, Nyquist theorem, eye pattern, adaptive equalization. Transmission over bandpass channels: complex envelope representation of bandpass signals, signal space analysis.

Part – B: 30-Marks

1. Digital Modulation and Multiple Access Techniques

ASK, FSK, PSK, DPSK, QPSK, 8PSK, 16PSK, QAM, M-ary modulation, continuous phase FSK, MSK. Coherent and non-coherent demodulation, multiple access techniques, FDMA, CDMA, TDMA, CDMA for wireless communications, near-far problem in CDMA, Rake receiver, handoff process in cellular communications, application examples.

2. Performance of Digital Communication Systems

Bit rate, Baud rate, BER of Ask, PSK and FSK. Matched filter receiver, error function, probability of error calculation of BPSK, BFSK M-ary PSK, error rates in binary and M-ary transmission, error analysis of PCM repeater systems.

8. Spread Spectrum Communications

Brief history of spread spectrum communications, generation of pseudo noise sequences, properties of M-sequences, direct sequence spread spectrum, processing gain, jamming margin, frequency hopping spread spectrum.

Text Books:

Course Code: CCE – 3612

Course Title: DIGITAL COMMUNICATION ENGINEERING SESSIONAL

Credit Hour: 1.5/ Contact Hour: 3 per week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Simulate different digital modulation technique using MATLAB.
ILO / CO: 2	Perform and practice the digital modulation technique through laboratory setting (Hardware), individually or in a small team.

Course Contents:

S.L.	Contents
1.	Introduction to the course, Basic Guidelines and advises for the course, Discussion about laboratory safety and Training Requirements on working in the LAB.
2.	Introduction to Digital Communication and Waveform Sampling through MODICOM-1 Board.
3.	Study on wave Sampling System using MATLAB Software.
4.	Experiment on Pulse Amplitude Modulation (PAM) system using Hardware and Software.
5.	Experiment on Pulse Code Modulation (PCM) system using Hardware and Software.
6.	Experiment on Delta Modulation system using Hardware.
7.	Experiment on Adaptive Delta Modulation system using Hardware.

- a. Text Books: N/A, but based on Theoretical concepts
- b. Lab Manual: Available In Telecom Lab

Course Code: CCE - 4701
Course Title: DATA COMMUNICATION & COMPUTER NETWORKING
 Credit Hour: 3/ Contact Hour: 3 per week

Course Objective:

On successful completion of this course, you will be able to:

1. Build an understanding of the fundamental concepts of computer networking.
2. Familiarize the student with the basic taxonomy and terminology of the computer networking area.
3. Introduce the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.
4. Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Independently understand basic computer network technology also explain Data Communications System and its components.
ILO / CO: 2	Explain the networks, topologies and layers of OSI model, function(s) of each layer also compare with TCP/IP model.
ILO / CO: 3	Classify error control and flow control techniques and types of LAN technologies.
ILO / CO: 4	Know about the concept of IP addressing and Subnetting its usage in networking.
ILO / CO: 5	Familiarity with the basic protocols of computer networks, and how they can be used to assist in network design and implementation.

Course Contents:

Mid-term Exam: 30 Marks

1. **Introduction:** Computer Networks and Applications, OSI reference model, TCP/IP model and terminology, Connectionless and Connection Oriented services, Service primitives, The ARPANET.
2. **Physical Layer:** Circuit switching and Packet switching, X-25 protocol, Frame relay and Cell relay, ATM reference model.
3. **Medium Access Sublayer:** Pure and slotted ALOHA, Persistent and Non-persistent CSMA, CSMA with collision detection and collision free protocols, IEEE standard 802.3 and Ethernet.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **Data Link Layer:** Types of errors, framing, error detection & correction methods; Flow control, Stop & wait ARQ, Go-Back- N ARQ, Selective repeat ARQ, HDLC.
5. **Network Layer:** Internet address, classful address, subnetting, static vs. dynamic routing, shortest path algorithm, flooding, distance vector routing, link state routing, ARP, RARP, IP, ICMP.

Part – B: 30-Marks

6. **Transport Layer:** UDP, TCP, Connection management, Addressing, Establishing and Releasing Connection, Congestion control algorithm, Flow control and Buffering, Multiplexing.
7. **Presentation Layer and Application Layer:** Data Compression techniques, Frequency Dependent Coding, Context Dependent Encoding.
8. **Networking in Practice:** Designing LAN, Cabling, Establishing Client- Server network, Configuring: Directory Server, Proxy server, FTP server, E-mail server, web server, DB server, Firewall, Network troubleshooting, network maintenance, network monitoring, Network programming.

Text Books:

1. Behrouz A. Forouzan, *TCP/IP Protocol Suite*, McGraw-Hill

2. Andrew S. Tanenbaum, *Computer Networks*, Prentice Hall
3. William Stallings, *Data and Computer Communications*, Prentice Hall
4. Behrouz A. Forouzan, *Data Communications and Networking*, McGraw-Hill

Course Code: CCE - 4702

Course Title: DATA COMMUNICATION & COMPUTER NETWORKING SESSIONAL

Credit Hour: 1.5/ Contact Hour: 3 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. Build an understanding of the fundamental concepts of computer networking.
2. Familiarize the student with the basic taxonomy and terminology of the computer networking area.
3. Introduce the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.
4. Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Identify the different internetworking devices and their functions.
ILO / CO: 2	Identify the different types of network topologies and protocols.
ILO / CO: 3	Understand the concepts of routing mechanisms, network interfaces
ILO / CO: 4	Design and apply subnet mask and address to fulfill networking requirements
ILO / CO: 5	Implementation of given topology using Packet Tracer

Course Contents:

S.L.	Contents
1.	Introduce to Computer Network Security Laboratory experiment
2.	Basic Topology design using Cisco Packet Tracer
3.	Experiment on setting Banner and Password using Cisco Packet Tracer
4.	Experiment on creation of network topology for a location and ping testing
5.	Register Jacket (RJ)45 connector connection and configure design
6.	Experiment on creation of network topology between IIUC administration and ETE department and ping testing
7.	Experiment on Addition of Switch to Switch connection and new Ethernet slot addition to router

Course Code: CCE-4705
Course Title: OPERATING SYSTEMS
 Credit Hours: 2 Contact Hours: 2 per week

Course Objectives:

The student will be taught principles of modern operating systems. In particular, the course will cover details of concurrent processes, multi-threads, CPU scheduling, memory management, file system, storage subsystem, and input/output management, the course will integrate theory and practice through coordinated lecture and lab hours.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Differentiate the working of an operating system and its components.
ILO / CO: 2	Describe process management and analyze the synchronization process.
ILO / CO: 3	Identify the working methodology of multithreaded applications and distinguish different scheduling algorithms.
ILO / CO: 4	Identify the reasons of deadlocks, and their remedial measures in an operating system.
ILO / CO: 5	Understand different memory management techniques used in operating systems.

Course Contents:

Section-A (Mid-term: 30 Marks)

- 1. Principle of operating systems and Operating system structure:** Definition of operating system, Different kinds of operating systems (Desktop, Multiprocessor, Distributed, Clustered, Real time, Handheld systems), Operating-System Services, User Operating-System Interface, System Calls, Types of System Calls, System Programs, Operating-System Design and Implementation, Operating-System Structure, Virtual Machines.
- 2. Process:** process management, inter- process communication, Process scheduling, Process Concept, Operations on Processes, Inter process Communication, Communication in Client-Server Systems, Basic Concepts of Process Scheduling, Scheduling Criteria and Scheduling Algorithms.
- 3. Multiprocessing and time sharing, Process coordination:** Multiple-Processor Scheduling, Thread Scheduling, Algorithm Evaluation, Control and scheduling of large information processing systems, Resource allocation; Dispatching; Processor access methods; Job control languages.

Section-B (Final Exam: 50 Marks)

Group-A (20 Marks)

- 4. Deadlocks:** Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.
- 5. Memory management:** Background, Swapping, Contiguous Memory Allocation, Paging, Structure of the Page Table, Segmentation.

Group-B (30 Marks)

- 6. Virtual memory:** The idea and advantage of virtual memory, Demand Paging, Page Replacement, Page Replacement Algorithms (FIFO, Optimal page replacement, LRU), Thrashing
- 7. File systems:** File Concept, Access Methods, Directory Structure, File-System Mounting, File Sharing, File-System Implementation, Directory Implementation, Allocation Methods
- 8. Protection and security:** Protection, Principles of Protection, Domain of Protection, Access Matrix, Access Control, Revocation of Access Rights, The Security Problem, Program Threats, System and Network Threats, Cryptography as a Security Tool, User Authentication, Implementing Security Defenses, Fire walling to Protect Systems and Networks

Recommended Books:

1. Abraham Silberschatz, Peter Baer Galvin, Greg Gagne. : Operating System Concepts.
2. Andrew S. Tanenbaum, : Modern Operating Systems.
3. Andrew S. Tanenbaum, : Distributed Operating Systems
4. Denis, R : Mastering LINUX

Course Code: CCE–4706
Course Title: OPERATING SYSTEMS SESSIONAL

Credit Hours: 1/ Contact Hours: 2 per week

Course Objectives:

- Understanding the operating system.
- Understanding the how the operating system abstractions can be used in the development of application programs.
- Develop basic resource management techniques.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand basic terms of Operating System.
ILO / CO: 2	Develop small sized operating system
ILO / CO: 3	Design secured system

Course Contents:

Lab No.	Name of Experiments
1.	Process scheduling
2.	Algorithm evaluation of job scheduling
3.	Inter process communication
4.	Time sharing system
5.	Applying system calls
6.	Deadlock handling
7.	Apply swapping technique
8.	Paging structure implementation
9.	Understanding segmentation
10.	File sharing implementation

Recommended Books:

1. E. Balagurusamy : "ANSI C"
2. Herbert Schildt : "Complete reference C++"
3. Any book of advanced assembly language

Course Code: ETE – 4707
Course Title: MICROWAVE ENGINEERING

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives

The overall aim of the course is to understand the theoretical principles underlying microwave devices and networks. The course also aims to deliver fundamental concepts and working principles of different microwave tubes, semiconductor devices and amplifiers. Different analytical techniques needed to understand operation of microwave circuits are also covered in the course. It also includes the design of different microwave system components such as transmission lines, waveguides, resonators, filters, waveguide components etc.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand the working principle of different Microwave Components
ILO / CO: 2	Analyze Microwave Circuits and Components using suitable engineering analytical techniques
ILO / CO: 3	Design different Microwave Components satisfying specified criteria
ILO / CO: 4	Prepare and Present a term paper on selected title

Course Contents:

Mid-term Exam: 30 Marks

- H.F Transmission Lines:** Telegrapher's Equation, Wave equation, Propagation constant, input impedance, insertion loss, transmission loss, Reflection Coefficient, transmission Coefficient, Standing Wave Pattern and VSWR, Phase and Group Velocities.
- Smith Chart and Impedance Matching and Tuning:** Smith chart, Applications of Smith Chart, Impedance matching with Lumped Elements (L Networks), Quarter wave Transformer, single double stub matching and double stub matching.
- Transmission Line and Waveguides:** Wave equations in waveguides, Basic Wave Types, Propagation of waves through Parallel plane waveguides (TE modes and TM Modes), Modes of wave propagation, rectangular waveguide (TE modes and TM Modes), TE₁₀ mode in rectangular waveguide, propagation modes in circular waveguide (TE modes and TM Modes), Stripline, Microstrip line.

Final Exam: 50 Marks

Part – A: 20-Marks

- Microwave Networks Analysis:** Impedance matrix, admittance matrix, transmission (ABCD) Matrix, Definition of scattering matrix, characteristics of S-matrix, scattering matrix of a two-port network, salient features of S-matrix, salient features of multiport network, impedance matrix, S-matrix of series element in the transmission line, S-matrix for E-plane Tee junction, S-matrix for H-plane Tee junctions, S-matrix for directional coupler.
- Microwave Resonators:** Series and Parallel Resonant Circuits, Rectangular Cavity Resonator, Circular Waveguide Cavity Resonator, Dielectric Resonator, Excitation of Resonator, Quality factor.

Part – B: 30-Marks

- Microwave Components:** Waveguide Directional Coupler, Coupled line Directional Coupler, Attenuator, Phase shifter, Isolator, Microwave Filters: By insertion loss method and Coupled Resonators, E Plane Tee, H plane Tee and Magic Tee, Hybrid Tee Junction.
- Microwave Tubes:** Transit time effects, Bunching and Velocity modulation, two cavity and Multicavity Klystron amplifier, Reflex Klystron oscillator, Magnetron Oscillator Traveling Wave Tube Amplifier (TWT), Backward Wave Oscillator (BWO).

- 3. Microwave Amplifier and Oscillators:** Two port power Gains, Single stage transistor amplifier design, Low noise amplifier design, Broadband amplifier Design, Construction and Working Principles of Gunn Diode, PIN Diode, Tunnel Diode etc.

8. M.L. Sisodia, G.S.Raghuvanshi, *Microwave Circuits and Passive Devices*, Wiley Eastern Ltd., New Age International Publishers Ltd., 1995.

Course Code: CCE – 4708
Course Title: MICROWAVE ENGINEERING SESSIONAL
 Credit Hour: 1/ Contact Hour: 2 per week

Course Objective:

Overall aim of the course is to introduce the students to Microwave Components with knowledge of what they do, to show how they look and are interconnected using ED-3000 Microwave Test Bench. The course also aims to make students skilled at designing and analyzing various microwave components using CST Microwave Studio software. The course finishes with a complex engineering problem solving project related to Microwave Engineering.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	To apply the knowledge of Microwave Transmission Lines, Waveguides, Waveguide Components, Resonators, Filters, Antenna etc. in developing solution of a complex microwave engineering problem.
ILO / CO: 2	Analyze and compare design alternatives and use measures of performance or other criteria to rank alternatives in solution of the complex microwave engineering problem.
ILO / CO: 3	Consult video instructions and materials, design experiments, simulate, analyze and interpret results to analyze microwave components and decide the best solution to the complex microwave engineering problem.
ILO / CO: 4	Model and simulate different microwave components and develop a prototype of the solution of complex microwave engineering problem using CST Studio Suite.
ILO / CO: 5	Able to do the lab works individually and as members or leader of a teams, report individual and team performance against the plan
ILO / CO: 6	Communicate the team's technical approaches to the design project in a polished, co-authored, written format, using language and graphics appropriate to the technical discipline.

Course Contents:

S.L.	Contents
1.	Discussion on Course Specification
2.	Design, Simulation and Analysis of Coaxial Transmission Line using CST Microwave Studio
3.	Design, Simulation and Analysis of Microstrip Transmission Line using CST Microwave Studio
4.	Analysis of Quarter Wavelength Transformer matching using CST Microwave Studio
5.	Design, Simulation and Analysis of Rectangular Waveguide and Waveguide Tees using CST Microwave Studio
6.	Distribution of Term Project
7.	Introduction to Microwave Test Bench ED-3000
8.	Discussion and Approval of GroupWise Project Solution
9.	Design, Simulation and analysis of Microwave Rectangular Cavity Resonator in CST Microwave Studio
10.	Design, Simulation and analysis of Microwave Filters using CST Microwave Studio
11.	Project Submission

Reference:

CST Microwave Studio Manual, 2005.

Course Code: CCE - 4711

Course Title: SATELLITE COMMUNICATION AND RADAR NAVIGATION

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. Determine the orbital parameters of a satellite.
2. Determine the azimuth and elevation angles and visibility of a geostationary satellite from an earth station.
3. Create link budgets for an uplink and a downlink and determine carrier to noise ratio (C/N) at an earth terminal receiver.
4. Calculate the baseband signal-to-noise ratio or bit error rate for a satellite link.
5. Design a communications satellite system to meet specified objectives for signal to noise ratio (S/N) in an analog baseband or BER in a digital link using appropriate multiple access techniques.
6. Determine the BER improvement obtained with various ARQ and FEC coding techniques.
7. Determine the effect of rain attenuation in a satellite link and the availability of the link based on the geographic location of the earth terminals.
8. Determine the type and dimensions of antennas for use on satellites and at earth stations.
9. Design satellite communication systems using GEO or LEO satellites to carry voice, video, or data signals using analog or digital modulation.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Acquire the basic knowledge of Satellite, Satellite launching technique, Link development and applications.
ILO / CO: 2	Investigate the real time problems and challenges in satellite communications
ILO / CO: 3	Ability to understand the future trends and applications of satellite communications

Course Contents:

Mid-term Exam: 30 Marks

1. **Overview of Satellite and Orbits:** Merits and demerits of satellite communications, Types of satellites based on their applications, Orbital Elements, Kepler's law of planetary motion, Developing the equations of the orbit, Describing the orbit of a satellite, Locating the satellite in the orbit, Locating the satellite with respect to the earth, Newton's Law of gravitation, Definitions of terms for earth-orbiting satellites, orbital parameters.
2. **Orbital Mechanics:** Types of orbits based on shapes and height, Geo-stationary orbits and non-geo-stationary orbits, Look angle determination, Limits of visibility, Orbital perturbations, Station Keeping, Earth eclipse of satellite, Subsatellite points, Launching orbits.
3. **Space Segment and Earth Segment:** Attitude and orbit control systems, Telemetry Tracking and Command subsystem, Transponders, Wideband receiver, Receive-only home TV system, MATV, CATV.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Propagation Effects and Their Impact on Satellite-Earth Links:** Introduction, Quantifying attenuation and depolarization, Propagation effects that are not associated with hydrometeors, Prediction of rain attenuation, Prediction of XPD, Propagation impairments countermeasures.
2. **Satellite Link Design:** EIRP, Transmission Losses, Free-space transmission, System noise temperature and G/T ratio, Noise figure, Design of downlinks, Design of uplink, Design of specified C/N: combining C/N and C/I values in satellite links, Overall C/N₀, Link design procedure.

Part – B: 30-Marks

1. **Multiple Access Techniques:** Pre-assigned FDMA, Demand-assigned FDMA, Spade System, TDMA, Frame and burst formats of TDMA, Reference burst, On-board signal processing, Network Synchronization, Satellite-Switched TDMA.
2. **VSAT:** Overview of VSAT systems, Network architectures, VSAT Access control protocols, Interference issues, VSAT earth station engineering.
3. **Application of Satellite:** GPS: GPS position location principles, satellite signal acquisition, GPS signal levels, Timing accuracy, GPS receiver operation, GPS navigation message.

Course Code: CCE - 4715
Course Title: RESEARCH METHODOLOGY

Credit Hour: 1/ Contact Hour: 1 per week

Course Objectives

On successful completion of this course, you will be able to:

1. To gain insights into how scientific research is conducted.
2. To help in critical review of literature and assessing the research trends, quality and extension potential of research and equip students to undertake research.
3. To learn and understand the basic statistics involved in data presentation.
4. To identify the influencing factor or determinants of research parameters.
5. To test the significance, validity and reliability of the research results.
6. To help in documentation of research results.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Comprehend various steps and their chronology for a good design of Research
ILO / CO: 2	Comprehend and apply the methods of efficient literature review, data collection and sampling design
ILO / CO: 3	Critically evaluate current research and propose possible alternate directions for further work
ILO / CO: 4	Comprehend various issues connected to writing a good research report including Plagiarism

Course Contents:

Mid-term Exam: 30 Marks

1. **Introduction to Research Methods:** Philosophy of Science, Evolutionary Epistemology, Scientific Methods, Hypotheses Generation and Evaluation.
2. Current issues in engineering education research, Code of Research Ethics, - Research Design - Survey Research - Case Study Research.
3. Definition and Objectives of Research, Various Steps in Scientific Research, Types of Research; Research Purposes.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Literature Reviews:** Element of research, reviewing of related works, choosing of methodology, comparative method, proposed method, Design of Research Methodology: Designing of proposed method.
2. **Data Collection and Sampling Design:** Sources of Data: Primary Data, Secondary Data; Procedure Questionnaire- Survey and Experiments – Design of Survey and Experiments.

Part – B: 30-Marks

1. **Sampling Merits and Demerits** - Control Observations - Procedures – Sampling Errors. Qualitative research approaches, Statistics & quantitative research approaches.
2. **Research Reports:** Structure and Components of Research Report, Types of Report, Layout of Research Report, Mechanism of writing a research report. Research design, including mixed methods, Measures of research quality.
3. **Plagiarism** Abstract, introduction, materials and methods, results, discussion, table, figures, citations, references, format, latex, conference paper, journal paper, Seminar and presentation.

Text book (s):

1. C.R. Kothari, *Research Methodology Methods and Techniques*, 2/e, Vishwa Prakashan, 2000

Course Code: CCE - 4800
Course Title: PROJECT/THESIS

Credit Hour: 4/ Contact Hour: 8 per week

Course Objective:

The objective of this course is to introduce the fundamental ideas of the research methodology and perform research or practical project on his related field of interest.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Identify summaries and critically evaluate relevant literature and write a literature review of the relevant field.
ILO / CO: 2	Identify key research questions within the field of Electronic and Telecommunication engineering on which the research will be carried out.
ILO / CO: 3	The capability to plan and use adequate methods to conduct qualified tasks in given frameworks and to evaluate this work.
ILO / CO: 4	Understand and apply theoretical frameworks to the chosen area of study.
ILO / CO: 5	Describe the process of carrying out independent research in written format and report your results and conclusions with reference to existing literature.
ILO / CO: 6	A consciousness of the ethical aspects of research and development work.

Course Contents:

Each student shall be required to undertake a project which is of academic value for a period of 2 semesters (semester 7 and semester 8). The project involves problem solving using engineering theories and techniques, and the implementation of the project design. The student is expected to design a possible solution to the problem, taking into account various aspects such as professionalism, economy, costing and engineering viability. At the end of the first trimester, the student is to present his/her progress at a seminar. At the end of the project, it is expected that the student submits a proper written report and to present his/her work at a seminar. The Grade will be calculated in the CGPA of the 8th semester of the Final Year.

Marks distribution for projects/thesis and general viva-voce is as follows:

1) Project/Thesis evaluation by Supervisor-	40%
2) Project/Thesis evaluation by Examiner-	30%
3) General Viva-Voce-	30%
Total	100%

Laboratory:

Access to the Sessional facilities shall be provided according to the needs and suitability of the projects.

References:

Reference materials relevant to the individual project to be provided by the project supervisor.

Course Code: CCE - 4801
Course Title: FIBER OPTIC COMMUNICATION

Credit Hour: 3/ Contact Hour: 3 per week

Course Objectives

On successful completion of this course, you will be able to:

1. To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures.
2. To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors. Design optimization of SM fibers, RI profile and cut-off wavelength.
3. To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes and different fiber amplifiers.
4. To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration.
5. To learn fiber slicing and connectors, noise effects on system performance, operational principles WDM and solutions.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Understand basics of optical communication systems.
ILO / CO: 2	The practical techniques involved in real world optical fiber communication systems.

Course Contents:

Mid-term Exam: 30 Marks

1. **Introduction:** Light propagation through optical fiber: Ray optics theory and mode theory. Optical fiber: Types and characteristics, transmission characteristics, fiber joints and fiber couplers.
2. **Material Dispersion and Pulse Dispersion:** Time dispersion in bulk media, combined effects of material dispersion and multi path dispersion, Root mean square pulse width and frequency response comparison of three of optical fibers, Acceptance angle, an acceptance cone, numerical aperture.\
3. **Optical Sources and Light Detectors:** Introduction to various types of Lasers, Semiconductor Injection Laser: Structure, theory of operation including rate equations and characteristics, LED: Structure, theory of operation and characteristics, Device types, their characteristics, Detection principles, Quantum efficiency, Responsivity, Semiconductor photodiodes with and without internal gain. PIN diode, Avalanche photo diode, PIN FET and Integrated receivers and their characteristics.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Optical Amplifier:** Laser and fiber amplifiers, applications and limitations.
2. **Connectors and Couplers:** Active and passive, different types, applications and characteristics, Fiber Manufacturing Techniques, Signal Degradation in OF link Losses in optical fibers viz., 1) Absorption, 2) Rayleigh scattering 3) Wavelength dispersion 4) Radiation dispersion 5) Coupling losses 6) Splices and Connectors.

Part – B: 30-Marks

1. **Transmission Limitations:** Chromatic dispersion, nonlinear refraction, four wave mixing and laser phase noises.
2. **Measurements:** Power attenuation measurement, dispersion, refractive index profile, numerical aperture, eye pattern bit rate OTDR measurements.
3. **Receiver Analysis and Multi-channel optical system:** Direct detection and coherent detection, noise and limitations, Frequency division multiplexing, wavelength division multiplexing and optical CDMA, Radio on fiber technology, Fiber optic access networks.

Text Books:

1. John M. Senior, *Optical Fiber Communication*, 2nd Edition, Pearson Education, 2007

2. Gerd Keiser, *Optical Fiber Communication*, 3rd Edition, McGraw Hill, 2000

Reference Books:

4. R.P. Khare, *Fiber Optics and Optoelectronics*, Oxford University Press, 2.

Course Code: CCE - 4802

Course Title: FIBER OPTIC COMMUNICATION SESSIONAL

Credit Hour: 1.5/ Contact Hour: 3 per week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Fundamentals, advantages and improvements in optical fiber communication system.
ILO / CO: 2	Familiarization with types, basic properties and transmission characteristic of optical fibers.
ILO / CO: 3	Investigation, working and analysis of important parts at the transmitter (LEDs, modulators etc.) as well as at the receiver sides (optical detector etc.) of the optical communications system.
ILO / CO: 4	Develop the configuration and architecture of optical communication and their applications using Opti system, OTDR, and splicing machine.
ILO / CO:5	Lab report presentation of assigned lab tasks

Course Contents:

S.L.	Contents
1.	Circuit board familiarization with FACET®91025. Identify the different circuit blocks on the Fiber Optic Communications circuit board. Describe the basic parts of a fiber optic communication link.
2.	Determination of Numerical aperture and core area of optical fiber cable. Measurement of the light Intensity through optical fiber cable.
3.	Experiment on splicing of optical fiber cable.
4.	Introduction to Opti system optical simulator tool.
5.	Design an Optical transmission system through Opti system Software.
6.	Performance analysis of Wavelength Division Multiplexing (WDM) technology using Opti System optical simulator tool.
7.	Measurement of Erbium Doped Fiber Amplifier (EDFA) gain for WDM light wave systems.
8.	Testing optical fiber cable link using optical time-domain reflectometer (OTDR)
9.	Observation of analog signal transmission using KL-95001 optical trainer board.

Course Notes:

Lab Manual available in the Lab Titled ETE-4722: Optical fiber communications Sessional

Course Code: CCE-4803
Course Title: ARTIFICIAL INTELLIGENCE
 Credit Hours: 2/ Contact Hours: 2 per week

Course Objectives:

The search and problem-solving methods are applicable throughout a large range of industrial, civil, medical, financial, robotic, and information systems. We will investigate questions about AI systems such as: how to represent knowledge, how to effectively generate appropriate sequences of actions and how to search among alternatives to find optimal or near-optimal solutions

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Be familiar with Artificial Intelligence, its foundation and principles.
ILO / CO: 2	Examine the useful search techniques; learn their advantages, disadvantages and comparison.
ILO / CO: 3	Learn programming language to program intelligent systems.
ILO / CO: 4	Understand important concepts like Expert Systems, AI applications.
ILO / CO: 5	Be exposed to the role of AI in different areas like NLP, Pattern Recognition etc.
ILO / CO: 6	Learn the practical applicability of intelligent systems, specifically its applications and be able to develop intelligent systems.

Course Contents:

Mid-term Exam: 30 Marks

- 1. Introduction:** Introduction to AI ,The AI problems, AI technique, philosophy and development of Artificial intelligence
- 2. Problem Spaces and Search:** State space search, Uninformed and informed search techniques: BFS, A*, variations of A*. Local search and optimization: hill climbing, simulated annealing
- 3. Adversarial Search and Game Playing:** Minimax algorithm, alpha-beta pruning, stochastic games, Constraint- satisfaction problems

Final Exam: 50 Marks

Part – A: 20-Marks

- 4. Knowledge and Reasoning;** Logical agents, Propositional logic, First-order logic, Inference in FoL: forward chaining, backward chaining, resolution, Knowledge representation: Frames, Ontologies, Semantic web and RDF
- 5. Introduction to PROLOG:** Facts and predicates, data types, goal finding,• backtracking, simple object, compound objects, use of cut and fail predicates, recursion, lists, simple input/output, dynamic database.

Part – B: 30-Marks

- 6. Uncertain knowledge:** and reasoning Probabilistic reasoning, Bayesian networks, Fuzzy logic
- 7. Decision-Making:** basics of utility theory, decision theory, sequential decision problems, elementary game theory, sample applications.
- 8. Machine Learning and Knowledge Acquisition:** learning from memorization, examples, explanation, and exploration. learning nearest neighbor, naive Bayes, and decision tree classifiers, Q-learning for learning action policies, applications.

Text Books:

1. Artificial Intelligence, Elaine Rich & Kevin Knight, TMH Publication
2. Introduction to Turbo PROLOG, Carl Townsend, BPB Publication
3. Introduction to AI & Expert Systems, Dan W. Patterson, PHI Publication
4. Artificial Intelligence: A Modern Approach, 3rd Edition, by Stuart Russell and Peter Norvig.

Course Code: CCE – 4804**Course Title: ARTIFICIAL INTELLIGENCE SESSIONAL**

Credit Hours: 1/ Contact Hours: 2 per week

Course Objective:

Identify the type of an AI problem (search, inference, decision making under uncertainty, game theory, etc). Formulate the problem as a particular type. Compare the difficulty of different versions of AI problems, in terms of computational complexity and the efficiency of existing algorithms. Implement, evaluate, and compare the performance of various AI algorithms, including both empirical demonstration and theoretical proofs.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Students will get the basic idea of how to program in prolog and its working environment and Student will understand how to write simple facts using prolog.
ILO / CO: 2	Student will understand how to write a program using the rules and also understand how to solve monkey banana problem using rules in prolog.
ILO / CO: 3	Student will understand how to create a expert system using prolog.
ILO / CO: 4	Student will understand the implementation of Fibonacci and factorial series implementing all set operations using prolog.
ILO / CO: 5	Student will implement travelling salesmen problem, water-jug problem, Library Management system using prolog.

Course Contents:

S.L.	Contents
1.	Study of Prolog.
2.	Write simple fact for the statements using PROLOG.
3.	Write predicates One converts centigrade temperatures to Fahrenheit, the other checks if a temperature is below freezing.
4.	Write a program to solve the Monkey Banana problem.
5.	WAP in turbo prolog for medical diagnosis and show the advantage and disadvantage of green and red cuts.
6.	WAP to implement factorial, fibonacci of a given number.
7.	Write a prolog program to implement all set operations (Union, intersection, complement etc.)
8.	Write a program to solve traveling salesman problem.
9.	Write a program to solve water jug problem using LISP
10.	Write a prolog program to implement Library Management system.

Reference:

Lab manual of artificial intelligence.

Course Code: CCE – 4805
Course Title: COMPILER DESIGN

Credit Hours: 2/ Contact Hours: 2 per week

Course Objectives:

- Grasp of compiler construction.
- To introduce the major concept areas of language translation and compiler design.
- To enrich the knowledge in various phases of compiler and its use, code optimization techniques, machine code generation, and use of symbol table.
- To extend the knowledge of parser and understand the theory and practice of compiler implementation.
- To provide practical programming skills necessary for constructing a compiler
- Utilize tools to automate compiler construction.
- Develop a large, complex, but well-structured software system that implements various phases of a compiler such as the scanner, parser, code generator, and optimizer.
- Identify the similarities and differences among various parsing techniques and grammar transformation techniques
- Over a series of experiments and project, you will create an extremely simple compiler, c-, as a project in this course. The projects are Parsing, Scanning, Semantic Analysis, and Code Generation. The text provides a good deal of the structure and the best solutions for each project will be available for all students in succeeding projects.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Acquire the knowledge of modern compiler & its features.
ILO / CO: 2	Develop a scanner and parser by Applying the knowledge of LEX tool and YACC tool.
ILO / CO: 3	Design & implement a software system for backend of the compiler.

Course Contents:

Section-A (Mid-term: 30 Marks)

- 1. Structure of compiler:** Translator, Basic principles of compilers and compiler design, types of compilers, applications, phases of a compiler.
- 2. Grammars & expressions:** Concepts of languages and Grammars, Terminals and non-terminals, Useless non-terminals and Inaccessible tokens, Context-Sensitive Grammars, Context-Free Grammars, Right linear grammar, left linear grammar, Derivations and Parse trees, Ambiguous grammar.
- 3. Automata:** Lexical analysis, Regular expressions, finite automata, Non-deterministic Finite-State Automata, Minimization of Finite-State Automata, DFA, Symbol table management.

Section-B (Final Exam: 50 Marks)

Group-A (20 Marks)

- 4. Syntax Analysis:** Parser, Error-Recovery, Left recursion, Left factoring, Top-Down Parsers, FIRST and FOLLOW, Recursive-Descent and Predictive Parsing, LL(1) parsing.
- 5. Parsing:** Bottom-Up Parsing, Operator Precedence parsing, LR Parsers, Construction of SLR, CLR, LALR Parse Tables, Shift-Reduce Parsing.

Group-B (30 Marks)

- 6. Syntax-Directed Translation:** Syntax-Directed definitions, Semantic Rules, Dependency Graph, Attributes, Construction of Syntax trees, Type checking, Type expressions, Translation Scheme, Type checking of expressions, statements and functions, Type conversions.
- 7. Intermediate code generation:** Run time environments, Activation tree, Control stack, Run time storage organization, Storage allocation strategies, Intermediate languages, three address statements, quadruples, triples, indirect triples and polish notations.

- 8. Code Generation and Optimization:** Code generation issues, Instruction costs, Basic blocks, Flow graphs, DAG representation, Next use information, Transformations of Basic Blocks, Peephole optimization, Function preserving transformations, Optimization of Basic Blocks, Different models of code generation, error detection and error handling.

Recommended Books:

| 2. Compiler principles, technique and tools | : Alfred V. Aho, Ravi Sethi |
| 3. A.J Holub | : Compiler Design in C. |
| 4. Trembly and Sorensen | : Theory and Practices of Compiler Writing. |

Course Code: CCE - 4806
Course Title: COMPILER DESIGN SESSIONAL

Credit Hours: 1/ Contact Hours: 2 per week

Course Objectives:

- To implement the Lexical Analyzer by using various Lexical Analyzer tools and C programming language
- Design and implementation of Syntax Analyzer and parser
- Experiments for NFA, DFA, CFG from given regular expression
- Develop the program to solve complex problems in compiler
- Design and implement the frontend of the compiler by means of generating Intermediate codes.
- To implement code optimization techniques.
- To implement the backend of the compiler
- To provide an Understanding of the language translation peculiarities by designing complete translator for a simple language
- Construction of the compiler for C programming language

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Apply the knowledge of lexical analyzer tools to develop a scanner, tokenizer and parser.
ILO / CO: 2	Design and implement a front end of the compiler.
ILO / CO: 3	Develop program for implementing symbol table.
ILO / CO: 4	Apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success.

Course Contents:

Lab No.	Name of Experiments
1	Introduction to compiler sessional, basic C programming structures, Basic compiler construction tools (LEX, YACC etc.)
2	Implementation of comments remover of C program in C programming language
3	Implementation of identifier and number checker of C program in C
4	Implementation of tokenizer by using C programming language
5	Implementation of Lexical analyzer using by LEX tool
6	Implementation of Syntax analyzer using by YACC tool
7	Mid-term Examination
8	Implementation of FIRST and FOLLOW of non-terminals from a CFG grammar
9	Implementation of left factoring and Left recursion remover in C
10	Implementation of Predictive Parsing Table using FIRST and FOLLOW from a grammar
11	Implementation of Shift-reduce Parser from a CFG
12	Construction of Calculator using LEX and YACC (Project)
13	Implementation of intermediate code generation using C programming
14	Lab report and project submission. Preparation for semester final examination

Text Books:

1. Compilers, Principles Techniques and Tools, Alfred V Aho, Ravi Sethi, Jeffrey D. Ullman, 2nded, Pearson, 2005

Course Code: CCE-4808
Course Title: SOFTWARE DEVELOPMENT SESSIONAL
 Credit Hour: 1.5 / Contact Hour: 3 per week

Course Objectives:

- To introduce basic commands and operations on database.
- To introduce stored programming concepts (PL-SQL) using Cursors and
- To familiarize front end tools of database.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Design and implement a database for a given problem using database design principles.
ILO / CO: 2	Apply stored programming concepts (PL-SQL) using Cursors and Triggers.
ILO / CO: 3	Use graphical user interface, Event Handling and Database connectivity to develop and deploy applications and applets.
ILO / CO: 4	Develop medium-sized project in a team.

Course Contents:

Lab No.	Name of Experiments
1	Creation of a database using DDL commands and writes DQL queries to retrieve information from the database.
2	Performing DML commands like Insertion, Deletion, Modifying, Altering, and Updating records based on conditions.
3	Creating relationship between the databases. *
4	Creating a database to set various constraints. *
5	Practice of SQL TCL commands like Rollback, Commit, Savepoint.
6	Practice of SQL DCL commands for granting and revoking user privileges.
7	Creation of Views and Assertions *
8	Implementation of Build in functions in RDBMS *
9	Implementation of various aggregate functions in SQL *
10	Implementation of Order By, Group By & Having clause. *
11	Implementation of set operators, nested queries and Join queries *
12	Implementation of various control structures using PL/SQL *
13	Creation of Procedures and Functions *
14	Creation of Packages *
15	Creation of database Triggers and Cursors *
16	Practice various front-end tools and report generation.
17	Creating Forms and Menus Mini project (Application Development using Oracle/ MySQL using Database connectivity) * a. Inventory Control System. b. Material Requirement Processing. c. Hospital Management System. d. Railway Reservation System. e. Personal Information System. f. Web Based User Identification System. g. Timetable Management System. h. Hotel Management System.

Text Books:

Books recommended by instructor.

Course Code: CCE - 4832

Course Title: General Viva

Credit Hour: 1/ Contact Hour: 2 per week

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Demonstrate the basic theorems and knowledge of all engineering topics offered in the program

Course Content:

As per Teacher's Plan.

Course Code: CCE - 4834

Course Title: INDUSTRIAL TRAINING/TOUR

Credit Hour: 1/ Contact Hour: 1 WEEK

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Identify and understanding the basic knowledge of digital communication system and theory.
ILO / CO: 2	Apply the knowledge for different digital modulation technique, data transmission and performance evaluation.
ILO / CO: 3	Prepare and present a term paper for a specific topic.

Course Content:

As per training in the industry.

21.D. Synopsis of Elective Courses

Course Code: CCE - 4717
Course Title: DIGITAL IMAGE PROCESSING (Not Offered)
 Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. Overview of digital image processing field.
2. Understand the fundamental DIP algorithms and implementation.
3. Gain experience in applying image processing algorithms to real problems.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Demonstrate understanding of the basic concepts of two-dimensional signal acquisition, sampling, and quantization.
ILO / CO: 2	Demonstrate understanding of spatial filtering techniques, including linear and nonlinear methods.
ILO / CO: 3	Demonstrate understanding of 2D Fourier transform concepts, including the 2D DFT and FFT, and their use in frequency domain filtering.
ILO / CO: 4	Demonstrated programming skills in digital image processing related problems.

Course Contents:

Mid-term Exam: 30 Marks

1. **Digital Image Fundamentals:** Human visual system, Sampling and Fourier analysis.
2. **Intensity Transformation and Spatial Filtering:** Histogram Processing, Spatial Filtering.
3. **Filtering in Frequency Domain:** Preliminary Concept, Extension to function of two variables, Image smoothing, Image Sharpening.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **Image Restoration and Reconstruction:** Noise Models, Noise Reduction, Inverse Filtering, MIMSE Filtering.
5. **Color Image Processing:** Color Models, Color Transforms, Image segmentation based on color.

Part – B: 30-Marks

6. **Image Compression:** Lossless compression: Variable length coding – LZW coding – Bit plane coding predictive coding-DPCM. Lossy Compression: Transform coding – Wavelet coding – Basics of Image compression standards: JPEG, MPEG, Basics of Vector quantization.
7. **Morphological Image Processing:** Erosion, dilation, Opening, Closing, Basic morphological algorithms: hole filtering, connected component, thinning, skeletons.
8. **Image Segmentation:** Point, line, edge detection, thresholding, Region based segmentation.

Course Code: CCE - 4718

Course Title: DIGITAL IMAGE PROCESSING SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4717**.

Course Code: CCE – 4719
Course Title: INTERNET OF THINGS (Not Offered)

Credit Hours: 2/ Contact Hours: 2 per week

Course Objectives:

The overall goal of this course is to enable you to build an IoT system from the ground up. Note, this is an IoT system; as you'll learn, there's extensive variety insofar as what an IoT system can be. That said, during this course, you'll learn the various kinds of IoT systems that you'll encounter and build one using representative technologies

Course Outcomes:

After successful completion of this course, the students should be able to:

- CO1.** Able to understand the application areas of IOT.
- CO2.** Able to realize the revolution of Internet in Mobile Devices, Cloud & Sensor Networks.
- CO3.** Able to understand building blocks of Internet of Things and characteristics.

Course Contents:

Section-A (Mid-term: 30 Marks)

- 1. Introduction & Concepts:** Introduction to Internet of Things, Physical Design of IOT, Logical Design of IOT, IOT Enabling Technologies, IOT Levels.
- 2. Domain Specific IOTs:** Home Automation, Cities, Environment, Energy, Retail, Logistics, Agriculture, Industry, Health & Life Style.

Section-B (Final Exam: 50 Marks)

Group-A (20 Marks)

- 1. M2M & System Management with NETCONF-YANG:** M2M, Difference between IOT and M2M, SDN and NFV for IOT, Software defined Networking, Network Function Virtualization, Need for IOT Systems Management, Simple Network Management Protocol, Limitations of SNMP, Network Operator Requirements, NETCONF, YANG, IOT Systems management with NETCONF-YANG.

Group-B (30 Marks)

- 1. Developing Internet of Things & Logical Design using Python:** Introduction, IOT Design Methodology, Installing Python, Python Data Types & Data Structures, Control Flow, Functions, Modules, Packages, File Handling, Date/ Time Operations, Classes, Python Packages
- 2. IOT Physical Devices & Endpoints:** What is an IOT Device, Exemplary Device, Board, Linux on Raspberry Pi, Interfaces, and Programming & IOT Devices.

Recommended Books:

- [2]. Adrian McEwen, "Designing the Internet of Things", Wiley Publishers, 2013, ISBN: 978-1-118-43062-0
- [3]. Daniel Kellmireit, "The Silent Intelligence: The Internet of Things". 2013, ISBN 0989973700

Course Code: CCE – 4720
Course Title: INTERNET OF THINGS SESSIONAL (Not Offered)

Credit Hours: 1/ Contact Hours: 2 per week

Course Objectives:

The students are expected to have some basic knowledge on computer hardware and software.

- ✓ To provide an overview on IoT tools and applications including sensing devices, actuation, processing and communications.
- ✓ To introduce hands-on IoT concepts including sensing, actuation, and communication through lab exercises with IoT development kits.

Course Outcomes:

After successful completion of this course, the students should be able to:

- C01.** Understand key IoT concepts on sensing devices, actuation, processing and communications
- C02.** Hands-on skills on prototyping IoT products and applications
- C03.** Assimilate new technological development in related field

Course Contents:

1. Introduction to Internet of Things (IoT)

- ✓ Historical background of IoT
- ✓ The IoT system stack: Sensors, edge computing, networking, cloud computing
- ✓ How IoT could enable innovative products and services

2. Electronics for IoT

- ✓ Overview of electronic signals (sampling and Nyquist theorem)
- ✓ General Purpose Input / Output (GPIO) and Pulse Width Modulation (PWM)
- ✓ ADC and DAC concepts
- ✓ Microcontrollers and computers for IoT (e.g., Arduino, Raspberry Pi, etc.)

3. Sensors for IoT

- ✓ An overview of sensors used in IoT
- ✓ Sampling frequency and bandwidth requirements for different sensors
- ✓ Interface common sensors and actuators to IoT development kits

4. Software and Data Analytics for IoT

- ✓ Libraries of development kits and examples (e.g., Arduino)
- ✓ Selection of development programming languages for different IoT services
- ✓ Web server and web services (e.g., Things Board, MQTT/HTTP)
- ✓ Data analytics with machine learning techniques (e.g., Python, Anaconda)

5. Low Power Wide Area Networks (LPWAN)

- ✓ Transmission of latency-sensitive real-time data and reliable signaling data
- ✓ Protocols for exchanging information among different IoT devices
- ✓ IoT communication protocols: Sigfox, LoRa, NB-IoT, etc.

6. Internet of Things Capstone

- ✓ To conclude the subject with a hands-on project on IoT applications

Recommended Books:

- [1]. R. Buyya, A. V. Dastjerdi, Internet of Things: Principles and Paradigms, Cambridge, MA, 2016.
- [2]. IEEE Transactions and other journals

Course Code: CCE – 4721
Course Title: COMPUTER INTERFACING (Not Offered)

Credit Hours: 2/ Contact Hours: 2 per week

Course Objectives:

- Understand fundamental operating concepts behind microprocessors and microcontrollers.
- To learn and understand architecture and programming of 8086 processor.
- To learn and understand interfacing techniques like memory and I/O Interfacing with 8086.
- To learn and understand architecture and programming of 8051 microcontroller.
- To learn and understand generation of time delay, serial communication and interrupts.
- To learn and understand the development of microprocessor and microcontroller-based system.

Course Outcomes:

ILOs / COs	Description
ILO / CO: 1	Design and implement programs on 8086 microprocessors.
ILO / CO: 2	Design I/O circuits.
ILO / CO: 3	Design Memory Interfacing circuits.
ILO / CO: 4	Design and implement 8051 microcontroller-based systems.
ILO / CO: 5	Describe the architecture and instruction set of ARM microcontroller

Course Contents:

Section-A (Mid-term: 30 Marks)

- 1. Introductory Concept:** Evaluation of microprocessor, Types of microprocessor, system bus, hardware of a microprocessor, memory-addressing technique.
- 2. 8086 Microprocessor:** properties, architecture, registers, FLAGS register, physical address calculation, addressing modes, Addressing Techniques of 8086 Microprocessor.
- 3. Instruction:** Instruction set, Instruction format, Fetch-decode-Execution cycle.

Section-B (Final Exam: 50 Marks)

Group-A (20 Marks)

- 1. Interrupt System:** Sources of interrupt, Types of interrupt, handling interrupt request, interrupt vector and table, 8259A priority interrupt controller, Daisy chain.
- 2. An overview of Intel 80186, 80286, 80386, 80486 and Pentium microprocessor:** Advanced microprocessor: Embedded microprocessor, Bit slice microprocessor, arithmetic processor, Multitasking, Itanium and Merced Microprocessor.

Group-B (30 Marks)

- 1. I/O operation:** Isolated and memory mapped I/O, 8255A Programmable peripheral Interface, DMA technique, I/O ports, I/O processor
- 2. Micro controller:** Architecture of 8051, Signals, Operational features, Memory and I/O addressing, Interrupts, Instruction set, Applications.
- 3. Embedded Systems:** Introduction to Embedded Systems, Characteristics, Components, Hardware-Software Partitioning, Specification and Modeling, Optimizing Design, SOC, Application Domains.

Recommended Books:

| 2. John P. Hayes | : Compute architecture and organization |
| 3. Bary B Brey | : The INTEL Microprocessors 8086/8088 |
| 4. Douglas V. | : Hall, Microprocessor and Interface. |
| 5. Ramesh Gaonker | : Microprocessor Interfacing |

Course Code: CCE – 4722
Course Title: COMPUTER INTERFACING SESSIONAL (Not Offered)

Credit Hours: 1/ Contact Hours: 2 per week

Course Contents:

Laboratory works based on **CCE – 4721.**

Course Code: CCE - 4723
Course Title: NETWORK PROGRAMMING (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. To introduce students to programming fundamentals and TCP/IP socket programming. This is an entry level unit of study which provides a suitable basis for later networking units that require Java-based skills.
2. To understand fundamental program structures.
3. To understand the concepts of system analysis (from 2015).
4. To explain fundamental object-oriented concepts (from 2015).
5. To write small programs in Java that use TCP/IP sockets.
6. To design, write and debug small programs in Java with text input/output.
7. To write small programs in Java that use simple GUI.

Course Outcomes:

Students who successfully complete the course will be able to:

1. Analyze the requirements of a networked programming environment and identify the issues to be solved.
2. Create conceptual solutions to those issues and implement a programming solution.
3. Understand the key protocols that support the Internet.
4. Apply several common programming interfaces to network communication.
5. Understand the use of TCP/UDP Sockets.
6. Apply advanced programming techniques such as Broadcasting, Multicasting.

Course Contents:

Mid-term Exam: 30 Marks

1. **Basic Network Concepts:** The Layers of a network, IP, TCP, UDP, Ports, Internet, Internet address block, Network address translation, Firewalls, Proxy Servers, Client-Server model, DNS.
2. **Internet Addresses and HTTP:** The *InetAddress* class, Creating new *InetAddress* objects, Getter Methods, Address Types, Testing Reachability, Object methods, *Inet4Address* and *Inet6Address*, The network Interface class, Factory methods, Getter methods, Some usefull programs like Spam Check, Processing web server logfiles, HTTP protocol Keep-Alive, HTTP methods, The Request body, *CookieManager*, *CookieStore*.
3. **URLs and URIs:** URIs, URLs, Relative URLs, The URL Class, Creating new URLs, Retrieving Data from a URL, Splitting a URL into pieces, Equality and comparison of URLs, The URI class, Constructing a RUI, The parts of the URI, Resolving Relative URIs, *URLEncoder*, *URLDecoder*, Proxies, System properties of Proxies, Proxy Class, *Proxy Selector* Class, Communicating with Server-Side Programs through GET, Accessing Password-Protected Sites.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **URL Connections:** Opening URL connections, Reading data from a server, Reading the header, Web caches, Configuring the connection, Configuring the client Request HTTP header, Writing data to a server, Securing considerations for *URLConnections*, Guessing MIME media types, *HttpURLConnection*.
5. **Sockets for Clients:** Using Sockets, Investigating Protocols with Telnet, Reading from Servers with Sockets, Writing to Servers with Sockets , Constructing and Connecting Sockets, Basic Constructors, Picking a Local Interface to Connect From, Constructing Without Connecting , Socket Addresses, Proxy Servers, Getting Information About a Socket, Setting Socket Options.

Part – B: 30-Marks

6. **Sockets for Servers and Secure Sockets:** Using *ServerSockets*, Serving Binary Data, Multithreaded Servers, Writing to Servers with Sockets, Closing Server Sockets, Logging, Constructing Server Sockets, Getting Information About a Server Socket, Socket Options, HTTP Servers, Secure Communications, Creating Secure Client Sockets, Choosing the Cipher Suites, Event Handlers, Session Management, Client Mode, Creating Secure Server Sockets, Configuring *SSLServerSockets*.
7. **Java Database Connectivity:** The Vendor variation problem, SQL and versions of JDBC, Creating and ODBC data source, Simple database access, Modifying the database contents, Transactions, Metadata, Using a GUI to access a database, Scrollable *ResultSet* in JDBC 2.0, Modifying databases via Java methods, Using the *DataSource* interface.
8. **UDP:** The UDP protocol, UDP clients, UDP servers, The *DatagramPacket* class, The *DatagramSocket* class, Socket options, Applications of UDP, *DatagramChannel*.

Text books:

1. Harold, E. R, *Java Network Programming*, 3rd Edition, O'Reilly.

Reference books:

Course Code: ETE - 4724

Course Title: NETWORK PROGRAMMING SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4723**.

Course Code: CCE - 4725
Course Title: EMBEDDED SYSTEM DESIGN (Not Offered)
 Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. Students have knowledge about the basic functions of embedded systems.
2. Students have knowledge about the basic structure of embedded systems.
3. Students have knowledge about the basic concepts of embedded systems.
4. Students have knowledge about the applications of embedded systems.
5. Students have knowledge about the development of embedded software.

Course Outcomes:

1. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.

Course Contents:

Mid-term Exam: 30 Marks

1. Embedded Microcontroller: Introduction, Evolution, Architecture, comparison with microprocessor, commercial Microcontroller devices, Applications, selection of a Microcontroller,
2. MCS51 architecture, 8051-pin description, connections, I/O ports and memory organization.
3. Addressing modes, Instructions, I/O port programming, Interrupts, Timer/Counters and serial communication. Real world interfacing such as LCD, ADC, DAC, stepper motor, Key Board, External memory and PPI 8255 Interface.

Final Exam: 50 Marks

Part – A: 20-Marks

4. Design with Atmel Microcontrollers 89CXX: Using flash and other memory devices, Flash programming, Applications such as pulse width measurement, Frequencies counter etc. PIC Micro controllers: Overview, Features PIC 16C6X / 7X , PIC 16F8XX based systems.
5. Embedded System: Definitions, Classification, Processors in the system, Other hardware units, Software embedded into a system, Software modules and tools for designing an embedded system.

Part – B: 30-Marks

6. Processor and memory organization: Structural units, features, and Processor selection for an embedded system. Memory devices, organization, Selection.
7. Memory Allocation and Maps. Devices and Buses for Devices Networks: I/O devices, Timer and counting devices serial communication using I2C, CAN and advanced I/O buses between Networked Multiple devices, Parallel communication using ISA, PCI, PCI –X and Advanced buses,
8. Device drivers and interrupts servicing mechanism, context and the periods for context switching Deadline and Interrupt latency.

Course Code: CCE - 4726

Course Title: EMBEDDED SYSTEM DESIGN SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on CCE – 4725.

Course Code: CCE- 4727

Course Title: ROBOTICS AND AUTOMATION (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Contents:

1. Introduction to Robot, Robot configuration, Working envelopes and Degrees of freedom, Robot programming, Calibration of Robots, Robotics sensor, Robotic vision, Robot applications, Justification for Robots, Robots safety.
2. Digital Image representation, Elements of a digital Image processing system, An image model sampling and quantization, Some basic relationships between pixels, Imaging pixels, Imaging geometry, Image transformation, Image transformation, Image enhancement, Image smoothing, Image sharpening.

Recommended Books:

1. John J. Craig : Introduction to Robotics Machines and Control
2. R. Paul : Robot Manipulators

Course Code: CCE- 4728

Course Title: ROBOTICS AND AUTOMATION SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4727**.

Course Code: CCE- 4729

Course Title: COMPETITIVE PROGRAMMING (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Contents:

Recommended Books:

Course Code: CCE- 4730

Course Title: COMPETITIVE PROGRAMMING SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4729**.

Course Code: CCE- 4811
Course Title: FAULT TOLERANT SYSTEM (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

To provide students with a sound knowledge of distributed fault-tolerant systems design. To cover protocols for synchronous distributed systems. To investigate protocol complexity due to system asynchrony and how to monitor and test distributed applications.

Course Outcomes

By the end of the module the student should be able to:

- C01.** Understand the risk of computer failures and their peculiarities compared with other equipment failures.
- C02.** Know the different advantages and limits of fault avoidance and fault tolerance techniques.
- C03.** Be aware of the threat from software defects and human operator error as well as from hardware failures.
- C04.** Know the different forms of redundancy and their applicability to different classes of dependability requirements.
- C05.** Be able to choose among commercial platforms (fault-tolerant or non fault-tolerant) on the basis of dependability requirements.

Course Contents:

Introduction to fault tolerant system and Architecture. Fault detection and location in combination and sequential circuits; fault test generation for combination and sequential circuits; Digital simulation as a diagnostic tool. Automatic test pattern generator, fault modeling, Automatic test equipment, faults in memory, memory test pattern and reliability. Performance monitoring, self-checking circuits. Burst error correction and Triple modular redundancy, Maintenance processors.

Recommended Books:

1. David James Norman : Professional Electronic Trading

Course Code: CCE- 4812
Course Title: FAULT TOLERANT SYSTEM SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4812**.

Course Code: CCE- 4813
Course Title: SIMULATION & MODELING (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

The aim of this course is to introduce various system modeling and simulation techniques and highlight their applications in different areas. It includes modeling, design, simulation, planning, verification and validation. After learning the simulation techniques, the students are expected to be able to solve real world problems which cannot be solved strictly by mathematical approaches. This course begins by demonstrating the usefulness of simulation as a tool for problem solving in business, industry, government, and society.

Course Contents:

Simulation methods, Model building, random number generator, Simulation languages. Statistical analysis of results, validation and verification technique. Digital simulation of continuous systems. Analogue simulation of continuous systems. Simulation and analytical methods for analysis of computer systems and practical problems in business and practice. Introduction to simulation packages.

Recommended Books:

1. J. Banks, J.S. Carson, B. L. Nelson, D.M. Nicol : Discrete Event System Simulation
2. Averill M. Law, W. D. Kelton. : Simulation & Modeling Analysis

Course Code: CCE- 4814
Course Title: SIMULATION & MODELING SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4813**.

Course Code: CCE- 4815
Course Title: REMOTE SENSING TECHNOLOGY (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

The course is designed to fulfill the following objectives:

- ✓ To provide background knowledge in physics and theoretical concept of Remote Sensing
- ✓ To provide experience in the operational aspects of Remote Sensing
- ✓ To provide a glimpse to the on-going RS activities across the globe

Course Outcomes:

Students who successfully complete the course will be able to:

- CO1.** Enhance understanding in Remote Sensing and develop capacity for critical thinking and utilizing its tools in various disciplines
- CO2.** Ability to theoretically tackle with and plan Remote Sensing applications in Geosciences
- CO3.** Communicate their knowledge and experiences to specialists within a research working group to confront with an issue that requires an integrated approach
- CO4.** Communicate their knowledge to a non specialist audience
- CO5.** Be able to improve their knowledge and capacity in a self- directed or autonomous manner

Course Contents:

History and Scope of Remote Sensing, Electromagnetic Radiation, Photographic Sensors, Digital Data, Image Interpretation, Land Observation Satellites, Active Microwave and Thermal Radiation, Image Resolution and Preprocessing, Image Classification and Field Data, Accuracy Assessment, Hyperspectral Remote Sensing, Plant Sciences, Earth Sciences, Land Use, and Land Cover, Global Remote Sensing, Engineering Applications, Urban-Industrial Applications.

Recommended Books:

1. Robert A. Schowengerdt : Remote Sensing
2. Floyed M. Henderson, Anthony J Leur's : Manual of Remote Sensing, Principles and Applications
3. Arthur Cracknell, Ladson Hayes : Introduction to Remote Sensing
4. Richard O Duda, etc. : Pattern Classification

Course Code: CCE- 4816
Course Title: REMOTE SENSING TECHNOLOGY SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4815**.

Course Code: CCE- 4817
Course Title: STOCHASTIC PROCESS (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

The course introduces the notion of representing signals using parametric models; it extends the broad topic of statistical estimation theory covered in the Probability, Random Variables, and Estimation Theory course for determining optimal model parameters. In particular, the Bayesian paradigm for statistical parameter estimation is introduced. Emphasis is placed on relating these concepts to state-of-the-art applications and signals.

Course Outcomes:

Students who successfully complete the course will be able to:

1. Use the principle of orthogonality to derive least squares system identification and minimum mean square error state estimation algorithms.
2. Use probability theory to analyze properties of system identification and filtering algorithms.
3. Formulate and solve optimal system identification and filtering problems.

Course Contents:

Mid-term Exam: 30 Marks

1. **Random Processes:** Definitions, stationarity, Second-order description (mean, correlation function, power spectrum), Kullback-Leibler distance, linear vector spaces, Karhunen-Loève expansion.
2. **Optimization Theory:** Constrained and unconstrained problems.
3. **Estimation Theory:** Notions of error, parameter estimation, minimum mean-squared error estimation, relations to information theory, MAP estimation.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Estimation Theory:** Maximum likelihood estimation and the Cramér-Rao bound, linear estimators and the Orthogonality Principle, waveform parameter estimates.
2. **Linear Signal Estimation:** Wiener filters, adaptive filters adaptive filters, Kalman filters.

Part – B: 30-Marks

1. **Estimation Theory:** Bayesian filtering, spectral estimation filtering in the context of basis expansions, Denoising, wavelets, compressive sensing.
2. **Detection Theory:** Likelihood ratio test. ROC curves, M models, Neymann-Pearson detection, Stein's lemma, Sequential detection, Uncertainties in models.
3. **Detection Theory:** Simultaneous estimation and detection, Signals in additive noise, Non-Gaussian detection theory.

Recommended Books:

1. D.H. Johnson. Statistical Signal Processing.
2. Dimitris G. Manolakis, Vinay K. Ingle, Stephen M. Kogon, Statistical and Adaptive Signal Processing.
3. L. Scharf. Statistical Signal Processing: Detection, Estimation, and Time Series Analysis.
4. M. Hayes. Statistical Digital Signal Processing and Modeling.
5. S. Kay. Fundamentals of Statistical Signal Processing: Vol. I Estimation Theory, Vol II. Detection Theory.
6. Papoulis. Probability, Random Variables, and Stochastic Processes. 3rd Edition.

Course Code: CCE- 4818
Course Title: STOCHASTIC PROCESS SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4817**.

Course Code: CCE - 4819

COURSE TITLE: VLSI SYSTEM DESIGN AND MODELING (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

- 1) Get introduced to digital integrated circuits.
- 2) To teach fundamentals of VLSI circuit design and implementation using circuit simulators and layout editors.
- 3) To highlight the circuit design issues in the context of VLSI technology.
- 4) The main objective of this course is to introduce basic concepts of microelectronics, layout designing, floor planning and algorithms used in the chip designing process.
- 5) It offers a profound understanding of the design of complex digital VLSI circuits, computer aided simulation and synthesis tool for hardware design.

Course Outcomes:

Students who successfully complete the course will be able to:

- 1) To be aware about the trends in semiconductor technology, and how it impacts scaling and performance.
- 2) Able to learn Layout, Stick diagrams, Fabrication steps, Static and Switching characteristics of inverters
- 3) Synthesis of digital VLSI systems from register-transfer or higher-level descriptions in hardware design languages.
- 4) An ability to build a cell library to be used by other chip designers.
- 5) An ability to insert elementary testing hardware into the VLSI chip.
- 6) An ability to design elementary data paths for microprocessors, including moderate-speed adders, subtractions, and multipliers.
- 7) An ability to estimate and compute the power consumption of a VLSI chip.

Course Contents:

Mid-term Exam: 30 Marks

1. **Introduction:** Integrated Circuits trends, choice of technology, design approaches, the design process, Moor's law, VLSI Design style, overviews of VLSI Design Tools.
2. **Introduction to MOS Devices and Basic Circuits:** MOS device structure, MOS device mode of operation (cut off, saturation, linear, accumulation, depletion), threshold voltage, body effect, NMOS I-V equations and characteristics, PMOS I-V equations and characteristics, Principle of inverter, NMOS Inverter with resistor load, NMOS Inverter with NMOS Enhancement Transistor load, NMOS Inverter with NMOS Depletion Transistor load, Layout Design Rules and Latch up.
3. **CMOS Inverter Design:** The CMOS inverter, Circuit Characterization and Performance Estimation Transfer characteristics, noise margin, Resistance, capacitance, rise and fall times, delay, switching characteristics, gate transistor sizing and power consumption.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **CMOS Fabrication:** Introduction to Fabrication, Basic Fabrication Steps, Lithography, Diffusion and Ion Implantation, Epitaxy, Etching, Wafer cleaning, Metallization and Passivation, Steps for Fabricating a NMOS Transistor, n-Well CMOS Technology, p-Well CMOS Technology, Details (concept, properties, mechanism, types, applications etc. of Chemical Vapor Deposition (CVD), Oxidation and ion implantation.

5. **MOS Logical Circuit Design:** Combinational and sequential logic, Random logic, Static and Dynamic logic gates, N-MOS Transistor series/ Parallel combination, P-MOS Transistor series/ Parallel combination, DC analysis (NAND, NOR, X-OR, X-NOR), Series Parallel Equivalent Circuits, Pass transistor and Transmission gates.

Part – B: 30-Marks

6. **Applications of Combinational and Sequential Systems:** Parity generator, Multiplexers, General logic function blocks, Dynamic register element, Dynamic shift register, Arithmetic processor, Basic bus structures, 4-bit shifters, Adder, Dynamic RAM cell, pseudo-static RAM cell.
7. **Overview of Implementation Approaches:** Full Custom and Semi-Custom Design, Cell based design, Array based design, Standard cells design, Programmable Logic Array, FPGA, Stick Diagram, Scaling, Effect of Scaling in Circuit Performance.
8. **Introduction of HDLs and VHDL:** HDLs applications, Range of use, VHDL - overview: VHDL - History, VHDL - Application Field, VHDL benefits, VHDL model components, VHDL architecture bodies, Structural description, Behavioral description.

Course Code: CCE - 4820

Course Title: VLSI SYSTEM DESIGN AND MODELING SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4819**

Course Code: CCE- 4821**Course Title: BROADBAND COMMUNICATION NETWORKS (Not Offered)**

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

- ✓ Understanding the architecture, protocols and services that are used in broadband networks, and methods for acquisition of the new future technologies and services to be introduced in the next generation networks.
- ✓ Installing and maintaining the equipment needed to operate the broadband networks.

Course Outcomes:*Students who successfully complete the course will be able to:*

- C01.** Define services and specify their applications in modern broadband networks,
- C02.** Explain communication protocols,
- C03.** Analyze and compare the appropriate network architecture
- C04.** Develop, design and create broadband networks
- C05.** Choose an engineering approach to solving problems, starting with the acquired theoretical knowledge.

Course Contents:

1. **Introduction:** definition and basic characteristics of ISDN, defining and distributing services, broadband aspects of ISDN. B-ISDN architecture.
2. **Signalling:** access signalling, toll signalling, SS7 signalling, H323 and SIP. ATM. Intelligent networks (IN). VoIP and IPTV services. Virtual private networks (VPN). VPN basic characteristics; technologies, components and services; VPN based on multiprotocol commutation over labels (MPLS VPN).
3. **QoS and packet networks:** QoS architecture, mechanisms and protocols.
4. **Internet:** architecture and protocol stack of the Internet, Internet physical and logical picture, addressing and routing, Internet protocols and services, new generation Internet.
5. **Network architecture selection for IP traffic transmission:** network architecture evolution, optical network core architecture (IP over WDM, IP over OTN), networks architecture analysis and comparison. Broadband networks economy.
6. **VSAT Access Schemes:** Introduction to the architectures and protocols of integrated broadband communication networks, Network services and requirement, Networking and switching architectures for high-speed communication, Traffic characterization, Performance evaluation techniques, Protocol issues, and Case studies. Broad band uses in daily life.

Course Code: CCE- 4822**Course Title: BROADBAND COMMUNICATION NETWORKS SESSIONAL (Not Offered)**

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:Laboratory works based on **CCE – 4821**.

Course Code: CCE- 4823
Course Title: BIOMEDICAL ENGINEERING (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

The undergraduate biomedical electronics course integrates the knowledge of electronics and modern biology to solve problems encountered in living systems. The educational foundation provides a broad pathway for students to pursue a wide variety of post-graduate opportunities.

Course Outcomes:

- CO1.** Understand the basic concept of Physiology - Nervous system, Circulatory system, Respiratory system and Muscle Contraction.
- CO2.** Analyze the Interaction of Wave and Radiation with Human Body and Physiological Information.
- CO3.** Recognize the Technical Concepts and Operation of Medical Instrumentation.
- CO4.** Discuss the Application of Electronics in Diagnostic and Therapeutic Area.

Course Contents:

Mid-term Exam: 30 Marks

1. **Physics of Human Body:** The cell, Body fluid, Musculo-skeletal system, Respiratory system, Nervous system, The circulatory system, The body as a control system, The heart, Bioelectricity, Work done by heart, blood pressure and its measurements, Membrane potentials, Electrical activity of excitable cells, Molecular basis of muscle contraction, Basic electrical signals from the muscles.
2. **Interaction of Wave and Radiation with Human Body:** Body's detector and matter wave, speech noise, physiological effects of intense matter waves, Interaction of electromagnetic radiation on living matter, penetration of ray's into tissue, Biological effects of ionizing radiation: Dosimetry, primary effects, Biophysical effects of whole body irradiation, radiation measurement and protection.
3. **Biopotentials Electrodes and Amplifiers:** Biopotential electrode, Sensors, Transducers and bioelectric amplifiers, Electromagnetic interference of medical electronic equipment, ENG, EMG, ECG, ERG, EEG, MEG.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **Ultrasonography:** Physics of ultrasonic wave, Ultrasonic transducers, Absorption and attenuation of ultrasound, Scan modes, scan pattern and scanning systems, Doppler imaging, Echocardiography, Ultrasonic flow meter, Ultrasonic blood pressure measurement.
5. **X-ray:** X-ray production, X-ray image formation and contrast, Contrast types, Effects of photon energy, Area contrast, Fluoroscopic imaging system, computed tomography.

Part – B: 30-Marks

6. **Magnetic Resonance Imaging:** Nuclear magnetic resonance, Image characteristics, Gamma camera.
7. **Analytical and Medical Laboratory Instruments:** Blood components, Colorimeter, spectrophotometer, Blood cell counter, pH/Blood gas analyzer, chromatograph, Auto analyzer, Atomic absorption and atomic emission spectroscopy.
8. **Therapeutic and Prosthetic Devices:** Cardiac pacemaker, Hemodialysis, Defibrillator, Surgical diathermy.

Course Title: BIOMEDICAL ENGINEERING SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4823**.

Course Code: CCE - 4825

Course Title: CRYPTOGRAPHY AND NETWORK SECURITY (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

On successful completion of this course, you will be able to:

1. To provide deeper understanding into cryptography, its application to network security, threats/vulnerabilities to networks and countermeasures.
2. To study various approaches to Encryption techniques, strengths of Traffic Confidentiality, Message Authentication Codes.
3. To know Digital Signature Standard and provide solutions for their issues.
4. To be familiar with cryptographic techniques for secure (confidential) communication of two parties over an insecure (public) channel; verification of the authenticity of the source of a message.

Course Outcomes:

Students who successfully complete the course will be able to:

1. To outline the different OSI layers and their functionalities.
2. To design a security solution for a given application
3. To understand the Key Management techniques and Number Theory.

Course Contents:

Mid-term Exam: 30 Marks

1. **Introduction of Classical Encryption Techniques:** Security Trends, The OSI Security Architecture, Security Attacks, Security Services, Security Mechanisms, A Model for Network Security, Symmetric Cipher Model, Substitution Techniques – Caesar cipher, Monoalphabetic ciphers, Playfair cipher, Hill cipher, Polyalphabetic cipher, One-time pad, Transposition Techniques.
2. **Block Cipher:** Block Cipher Principles, The Data Encryption Standard, The Strength of DES, Differential and Linear Cryptanalysis, Block Cipher Design Principles, Block Cipher Modes of Operation, Modular Arithmetic, Euclid's Algorithm, Finite Fields, Polynomial Arithmetic.
3. **Advanced & Contemporary Symmetric Cipher:** Evaluation Criteria for AES, the AES Cipher, Multiple Encryption and Triple DES, Stream Ciphers and RC4.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **Confidentiality Using Symmetric Encryption:** Placement of Encryption Function, Traffic Confidentiality, Key Distribution, Random Number Generation.
5. **Public-Key Encryption:** Introduction to number theory, Principles of Public-Key Cryptosystems, Applications for Public-Key Cryptosystems, Requirements for Public- Key Cryptography, the RSA Algorithm.

Part – B: 30-Marks

6. **Key Management and Elliptic Curve Cryptography (ECC):** Key Management, Diffie-Hellman Key Exchange, Elliptic Curve Arithmetic, ECC-Key exchange using ECC, Elliptic Curve Encryption/Decryption.
7. **MAC and Hash Function:** Authentication Requirement, Authentication Functions, Message Authentication Code, Hash Functions, Security of Hash Functions and MACs, MD5 Message Digest Algorithm, Secure Hash Algorithm, RIPEMD-160, HMAC.
8. **Hash Algorithm, Digital Signatures and Authentication Protocols:** Secure Hash Algorithm, HMAC, HMAC Design Objectives, Digital Signature, Authentication Protocols, Digital Signature Standard, Mutual Authentication, One-Way Authentication, Digital Signature Standard.

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE –4825**.

Course Code: CCE - 4827

Course Title: NEURAL NETWORKS AND FUZZY LOGIC (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

This course aims at introducing the fundamental theory and concepts of computational intelligence methods, in particular neural networks, fuzzy systems, genetic algorithms and their applications in the area of machine intelligence. This can be summarized as:

1. To understand the fundamental theory and concepts of neural networks, neuro-modeling, several neural network paradigms and its applications.
2. To understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
3. To understand the basics of an evolutionary computing paradigm known as genetic algorithms and its application to engineering optimization problems.

Course Outcomes:

Students who successfully complete the course will be able to:

- CO1.** Comprehend the concept of fuzziness and concepts of neural networks
- CO2.** Knowledge representation using fuzzy rules, and fuzzy logic

Course Contents:

Mid-term Exam: 30 Marks

1. **Introduction:** Definition of artificial neural network. Similarities of neural network with human brain. Models of a Neuron, Neural Networks Viewed as Directed Graphs, Feedback, Network Architectures, Knowledge Representation, Classification of ANN. Terms used in ANN: Input/output sets, weights, bias or threshold.
2. **Learning Process:** Supervised & unsupervised, learning, error correction learning, Hebbian learning, Competitive learning, Kohonen self-organizing networks.
3. **Single Neuron/ Perceptron Networks:** Training methodology, application to linearly separable problems, multilayer perceptron networks, back propagation algorithm, virtues and limitations of back propagation, methods of speeding.

Final Exam: 50 Marks

Part – A: 20-Marks

1. **Radial Basis Function Networks:** Interpolation problems, covers theorem, regularization networks, functional expansion networks: functional link artificial neural network (FLANN), Cascaded FLANN.
2. **Fuzzy Set Theory & Rules:** Introduction to fuzzy systems, membership function, fuzzy union, intersection and complement, fuzzy relational operations, fuzzy IF THEN rules, fuzzy reasoning.

Part – B: 30-Marks

1. **Fuzzy Inference Systems:** Introduction, Mamdani fuzzy model, Sugeno fuzzy model, Takamoto fuzzy model, Neuro-fuzzy systems.
2. **Evolutionary Computing:** Introduction, gradient free optimization, genetic Algorithms: basic concept, search space, working principle, encoding, decoding, fitness function, selection, cross over, mutation, Particle swarm optimization: basic principle, algorithm & flowchart.
3. **Applications:** Applications of ANN, fuzzy systems & Evolutionary Computing to time series prediction, pattern classification, control, communication engineering and biomedical engineering.

Course Code: ETE - 4828

Course Title: NEURAL NETWORKS AND FUZZY LOGIC SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4827**.

Course Code: CCE - 4829
Course Title: MACHINE LEARNING (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

- To develop the concepts of and the techniques in key data mining tasks
- To provide hands-on experience with data mining using tools
- To encourage innovative and useful applications of data mining tasks

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- Identify data mining functionalities
- Apply data preprocessing techniques - data cleaning, data integration and transformation, data reduction, discretization, and concept hierarchy generation
- Identify data warehousing functionalities
- Describe data mining primitives, languages, and system architectures
- Apply analytical characterization techniques
- Perform attribute relevance analysis
- Mine descriptive statistical measures in large databases
- Mine association rules in large databases
- Use classification by decision tree induction techniques on large databases
- Use data mining software to perform data mining functionalities – mining association rules, classification and prediction and decision tree analysis.
- Describe the current needs in data mining research

Course Contents:

Introduction to machine learning; Learning algorithms: supervised, unsupervised, reinforcement, attribute based, neural network based, relational supervised and negative correlation; Genetic algorithm, genetic programming and evolutionary programming; Practical application of machine learning.

Recommended Books:

1. Data Mining: Concepts and Techniques, Third Edition by Jiawei Han, Micheline Kamber and Jian Pei
2. Web Data Mining, B. Liu, Springer, 2006.
3. Introduction to Information Retrieval, C. Manning et al., Cambridge University Press, Available Online, 2008.
4. Introduction to Data Mining, V. Tan et al. Addison-Wesley, 2006

Course Code: ETE - 4830
Course Title: MACHINE LEARNING SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4829**.

Course Code: CCE - 4851
Course Title: BIG DATA ANALYTICS (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

The main goal of this course is to help students learn, understand, and practice big data analytics and machine learning approaches, which include the study of modern computing big data technologies and scaling up machine learning techniques focusing on industry applications. Mainly the course objectives are: conceptualization and summarization of big data and machine learning, trivial data versus big data, big data computing technologies, machine learning techniques, and scaling up machine learning approaches.

Course Outcomes:

Students who successfully complete the course will be able to:

- C01.** Understand what Big Data is and why classical data analysis techniques are no longer adequate
- C02.** Understand the benefits that Big Data can offer to businesses and organisations
- C03.** Understand conceptually how Big Data is stored
- C04.** Understand how Big Data can be analysed to extract knowledge
- C05.** Communicate with data scientists

Course Contents:

Mid-term Exam: 30 Marks

1. **Introduction:** Definition of artificial neural network. Similarities of neural network with human brain. Course Title: BIG DATA ANALYTICS SESSIONAL (Not Offered)

Credit Hour: 1/ Contact Hour: 2 per week

Course Contents:

Laboratory works based on **CCE – 4851**.

Course Code: CCE - 4853
Course Title: OPTO-ELECTRONICS (Not Offered)

Credit Hour: 2/ Contact Hour: 2 per week

Course Objectives:

1. Students understand the analysis of the operation and performance of optoelectronic materials.
2. Students understand design criteria for semiconductor optical sources (including light emitting diodes and laser diodes) for a variety of applications.
3. Students understand design criteria for semiconductor optical detectors (including photodiodes and solar cells) for a variety of applications.

Course Outcomes:

1. Students are conversant with the optical properties of semiconductors.
2. Students are conversant with optical processes in semiconductors.
3. The students are conversant with the application of optical properties and processes in semiconductor optical sources.
4. The students understand the operation of LEDs and lasers.
5. The students are familiar with the structures and performance of LEDs and lasers.
6. The students understand the application of LEDs and lasers.
7. The students are conversant with the application of optical properties and processes in semiconductor optical detectors.
8. The students understand the operation of photodetectors.
9. The students are familiar with the structures and performance of photodetectors.
10. The students understand the application of photodetectors.

Course Contents:

Mid-term Exam: 30 Marks

1. **Optical Sources:** Laser: Introduction to various types of Lasers, Semiconductor Injection Laser: Structure, theory of operation including rate equations and characteristics, LED: Structure, theory of operation and characteristics.
2. **Optical modulators:** description of different kinds of modulation techniques, basic characteristics of optical modulators, electro optic modulators, acousto-optic modulators, interferometric modulators.
3. **Optical Detector:** Device types, their characteristics, Detection principles, Quantum efficiency, Responsivity, Semiconductor photodiodes with and without internal gain. PIN diodes, Avalanche photo diode, PIN FET and Integrated receivers and their characteristics.

Final Exam: 50 Marks

Part – A: 20-Marks

4. **Receiver amplifier:** Signal to noise ratio, low and high impedance, trans impedance, front end, FET preamplifiers, integrated optics.
5. **Receiver Performance Considerations:** Noise: Thermal, Dark current, Quantum, Digital signaling and Analogue transmission quantum noise, Receiver noise.

Part – B: 30-Marks

6. **Optical Amplification:** Optical Amplifiers: semiconductor laser amplifier and fiber amplifier.
7. **Integrated Optics:** Planar waveguides. Some integrated optical devices: beam splitter, directional couplers, switches, modulators, filters, injection lasers, polarization transformers and frequency translator, Optoelectronics integration, Optical bistability and digital optics.
8. **Measurement:** Measurement of complex linear and nonlinear optical properties of materials, testing of optical communication and microwave signal processing subsystems, and conducting ultrafast time-resolved measurements.
